

INCH-POUND

A-A-59466

1 July 1999

COMMERCIAL ITEM DESCRIPTION

CLIPS, ELECTRICAL,
GENERAL SPECIFICATION FOR

The General Services Administration has authorized the use of this commercial item description (CID) as a replacement for "Clips, Electrical, General Specification for" of W-C-440 for all federal agencies.

1. **SCOPE.** This CID covers the general requirements for electrical clips. Electrical clips covered by this CID are intended for commercial/industrial applications.

2. **CLASSIFICATION.** This CID uses a classification system which is included in the Part Identification Number (PIN) as shown in the following example (see 7.1).

2.1 **Types.** Electrical clips shall consist of the following types.

Type PC	-	Power clip
Type PCL	-	Power clip with lug
Type NC	-	Needle clip
Type TCM	-	Test clip, miniature
Type CC	-	Crocodile clip
Type TCI	-	Test clip, insulated
Type TC	-	Test clip
Type TCC	-	Test clip, clamping ears
Type BC	-	Battery clip

3. SALIENT CHARACTERISTICS.

3.1 **Interface and physical dimensions.** Electrical clips supplied to this CID shall be as specified herein (see figure 1 through figure 9, inclusive). When a definite material is not specified, material shall be used which will enable the electrical clips to meet the performance requirements of this specification. Acceptance or approval of any constituent material shall not be construed as a guaranty of the acceptance of the finished product.

3.1.1 **Insulation.**

3.1.1.1 **Rubber.** Rubber shall conform to class III, grade 50 of ZZ-R-765 and shall not contain reclaimed rubber.

3.1.1.2 **Polyvinyl chloride.** Polyvinyl material shall be opaque nonrigid vinyl chloride-acetate having a durometer hardness not over 60 shore type "A" test and the dielectric strength shall be 250 volts per mil of thickness minimum. After aging in oil for 8 hours at 100°C ±1.1°C (212°F ±2°F), polyvinyl material shall not be tacky nor show signs of decomposition, and when flexed, shall not crack nor split.

Beneficial comments, recommendations, additions, deletions, clarifications, etc., and any data which may improve this document should be sent to: Defense Supply Center, Columbus, ATTN: DSCC-VAM, 3990 East Broad Street, Columbus, OH 43213-1199, or telephone (614) 692-0553, or facsimile (FAX) (614) 692-6939.

A-A-59466

3.1.2 Metals.

3.1.2.1 Brass. Brass shall conform to ASTM B134.

3.1.2.2 Phosphor bronze. Phosphor bronze shall conform to ASTM B159.

3.1.2.3 Copper. Copper material as specified herein shall be commercially pure copper, or copper alloyed with 3 percent to 5 percent zinc.

3.1.2.4 Copper-beryllium alloy. Copper-beryllium alloy shall conform to ASTM B194, ASTM B196, or ASTM B197.

3.1.2.5 Steel. Steel shall be of such materials, construction, and quality to ensure the clips meet the performance requirements of this specification. QQ-W-428 and ASTM A228 have been enabled electrical clips meet the requirements of this specification.

3.2 Design and construction. Electrical clips shall be of the design, construction, and physical dimensions specified (see 3.7).

3.2.1 Insulator sets. When specified (see 6.1), clips shall be furnished with an insulator set molded of a polyvinyl or silicone rubber material having dimensions that will provide a suitable fit. When required, insulator sets shall be installed. Unless otherwise specified (see 6.1), these insulator sets shall be furnished half red and half black for polarity identification purposes.

3.2.2 Threaded parts. All threaded parts shall be in accordance with FED-STD-H28.

3.2.2.1 Engagement of threaded parts. Threaded parts shall engage by at least two full threads.

3.2.3 Attaching hardware. Unless otherwise specified, machine screws and rivets shall be fabricated from carbon steel which enable the electrical clips to meet the requirements of this specification except Bessemer compositions (55,000 lb_f/in² minimum ultimate strength). Brass screws shall be fabricated in accordance with ASTM B134.

3.2.4 Finish. Electrical clips shall be unplated, except that ferrous materials shall be suitably plated to resist corrosion.

3.2.5 Spring. The spring or clip shall be designed so that the spring will not become dislodged when clip is fully compressed.

3.2.6 Minimum metal thickness. Copper parts of electrical clips shall be of minimum thickness as specified in detail requirements for individual clip types.

3.2.7 Jaws. There shall be free jaw openings. In designs where jaws mesh, all teeth shall enter the mating trough. In designs where jaws pass, the front turn-over portions of the jaws shall not cause binding, and the maximum space between the end of the outer jaws turn-over portion and the inner jaw turn-over portion shall not exceed twice the thickness of the metal.

3.2.8 Shunt (where applicable). The shunt shall be placed in such a manner that one coil of the spring shall rest on each end of the shunt so that the shunt will not become dislodged.

3.2.9 Wire crimping ears. The wire crimping ears shall be of sufficient size that they will accommodate a wire capable of carrying the maximum current for which the clip is intended.

3.2.10 Hinge pins. Only solid rivets shall be used for hinge pins.

3.3 Spring pressure. The minimum opening force required shall be as specified on the applicable figure.

3.4 Salt-spray (corrosion). When electrical clips with attaching hardware are subjected to salt spray, there shall be no exposure of the plated base metals or blistering of plated surfaces of the hardware.

3.5 Marking. Electrical clips shall be marked with the manufacturer's (MFR) standard commercial PIN, and if space permits, the current rating (amps).

3.6 Workmanship.

3.6.1 Electrical clips. Electrical clips shall be free from burrs, sharp edges, flaws, fractures, or cracks in the metal. The clips shall be free of grease, oil, metal filings, chips, and other foreign material. They shall be uniform in quality and free from defects that will affect life, serviceability, or appearance.

3.6.2 Insulator sets. The interior shall be free from mold flash congestion. They shall be uniform in quality and free from defects that will affect life, serviceability, or appearance. Insulator sets shall not restrict free jaw opening of the clips.

3.7 Detail requirements for individual clip types. Detail requirements applicable to individual types of electrical clips shall be as specified on the applicable figure. In the event of any conflict between the general requirements of this specification and the detail requirements, the latter shall govern.

3.7.1 Type TCM electrical clip. Type TCM electrical clips shall be of the design, construction, and physical dimensions specified on figure 1 and shall be furnished with a conductor bridge or hole and insulation clamping ears.

Item number	A (max)	B (max)	Jaw opening (min)	Spring pressure (lbs-min)	Nominal current rating (amp)	Material	Metal thickness (min)
1	1.12 (28.45)	.28 (7.11)	.19 (4.83)	2	5	Copper	.0140 (.36)

NOTES:

1. Dimensions are in inches.
2. Metric equivalents are given for general information only.
3. Millimeters are in parentheses.
4. Drawing depicts only general design characteristics and is not intended to limit specific manufacturing processes.
5. Teeth shall mesh.

FIGURE 1. Type TCM clip, electrical.

A-A-59466

3.7.2 Type TC electrical clip. Type TC electrical clips shall be of the design, construction, and physical dimensions specified on figure 2 and shall be furnished with a screw-type wire accommodation, conductor bridge, and a banana plug facility.

Item number	A (max)	B (max)	C Attaching hardware	D (min-max)	Jaw opening (min)	Spring pressure (lbs-min)	Nominal current rating (amp)	Material	Metal thickness (min)
1	2.00 (50.80)	.34 (8.64)	6-32 UNC or 6-40 UNF 2A x 5/32 LG.	.153-.163 (3.89-4.14)	.31 (7.87)	3 1/2	10	Copper	.0186 (.47)

NOTES:

1. Dimensions are in inches.
2. Metric equivalents are given for general information only.
3. Millimeters are in parentheses.
4. Drawing depicts only general design characteristics and is not intended to limit specific manufacturing processes.
5. Teeth shall mesh.

FIGURE 2. Type TC clip, electrical.

3.7.3 TCI electrical clip. Type TCI electrical clips shall be of the design, construction, and physical dimensions specified on figure 3 and shall be furnished with a screw-type wire accommodation, conductor bridge, and a banana plug facility.

3.7.3.1 Insulated portions. Insulated portions shall be cellulose acetate or nylon.

Item number	A (max)	B (max)	C Attaching hardware	D (min-max)	Jaw opening (min)	Spring pressure (lbs-min)	Nominal current rating (amp)	Material	Metal thickness (min)
1	2.38 (60.45)	.41 (10.41)	6-32UNC OR 6-40UNF-2A X 5/32 LG.	.153-.163 (3.89-4.14)	.31 (7.87)	3 1/2	10	Copper	.0186 (.47)

NOTES:

1. Dimensions are in inches.
2. Metric equivalents are given for general information only.
3. Millimeters are in parentheses.
4. Drawing depicts only general design characteristics and is not intended to limit specific manufacturing processes.
5. Shaded area indicates insulated portion.
6. Teeth shall mesh.

FIGURE 3. Type TCI clip, electrical.

A-A-59466

3.7.4 Type TCC electrical clip. Type TCC electrical clips shall be of the design, construction, and physical dimensions specified on figure 4 and shall be furnished with a screw-type wire accommodation, conductor bridge, and insulation clamping ears.

Item number	A (max)	B (max)	C Attaching hardware	Jaw opening (min)	Spring pressure (lbs-min)	Nominal current rating (amp)	Material	Metal thickness (min)
1	1.75 (44.45)	.34 (8.64)	6-32UNC OR 6-40UNF-2A X 5/32 LG.	.31 (7.87)	3	10	Copper	.0186 (.47)

NOTES:

1. Dimensions are in inches.
2. Metric equivalents are given for general information only.
3. Millimeters are in parentheses.
4. Drawing depicts only general design characteristics and is not intended to limit specific manufacturing processes.

FIGURE 4. Type TCC clip, electrical.

A-A-59466

3.7.5 Type CC electrical clip. Type CC electrical clips shall be of the design, construction, and physical dimensions specified on figure 5 and shall be furnished with a screw-type wire accommodation and insulation clamping ears.

Item number	A (max)	B (max)	C Attaching hardware	Jaw opening (min)	Spring pressure (lbs-min)	Nominal current rating (amp)	Material	Metal thickness (min)
1	2.19 (55.63)	.38 (9.65)	6-32 UNC or 6-40 UNF-2AX 5/32 LG.	.31 (7.87)	4 1/2	10	Copper	.0260 (.66)

NOTES:

1. Dimensions are in inches.
2. Metric equivalents are given for general information only.
3. Millimeters are in parentheses.
4. Drawing depicts only general design characteristics and is not intended to limit specific manufacturing processes.
5. Item number 1 shall have a phosphor bronze spring and a brass screw.
6. Interlocking neck construction is required.

FIGURE 5. Type CC clip, electrical.

A-A-59466

3.7.6 Type PC electrical clip. Type PC electrical clips shall be of the design, construction, and physical dimensions specified on figure 6 and shall be furnished with a screw-type conductor accommodation for wire.

3.7.6.1 Hinge life (PC clips only). Hinge shall be constructed in such a manner that no damage will result nor will hinge become loosened or disassembled when opened and closed (100 operations).

Item number	A (max)	B (max)	C Attaching hardware	Jaw opening (min)	Spring pressure (lbs) (min)	Nominal current rating (amp)	Material	Metal thickness (min)
1	1.62 (41.15)	.31 (7.87)	6-32 UNC or 6-40 UNF 2A x 5/32 LG.	.25 (6.35)	4	10	Copper	.0238 (.60)
2	2.12 (53.85)	.38 (9.65)	6-32 UNC-2A x 3/16 LG.	.44 (11.18)	4	20	Copper	.0260 (.66)
3	2.44 (61.98)	.50 (12.70)	6-32 UNC-2A x 3/16 LG.	.62 (15.75)	7	40	Copper	.0310 (.79)
4	3.12 (79.25)	.69 (17.53)	8-32 UNC-2A x 1/4 LG.	.75 (19.05)	9	50	Copper	.0345 (.88)

NOTES:

1. Dimensions are in inches.
2. Metric equivalents are given for general information only.
3. Millimeters are in parentheses.
4. All items have crimp ears.
5. Design of pivot is optional.
6. Item number 1 shall have a phosphor bronze spring and a brass screw.
7. Item number 4 shall incorporate a solid copper shunt positioned to prevent overheating of the spring.
8. Drawing depicts only general design characteristics and is not intended to limit specific manufacturing processes.
9. Interlocking neck construction is required.
10. Insulator sets (see 3.2.1).

FIGURE 6. Type PC clip, electrical.

A-A-59466

3.7.7 Type PCL electrical clip. Type PCL electrical clips shall be of the design, construction, and physical dimensions specified on figure 7 and shall be furnished with a screw-type conductor accommodation for wire or terminal lug (see table on figure 7).

3.7.7.1 Hinge pin. The upset end shall be concentric with the rivet diameter and shall have like appearance to the rivet head.

Item number	A (max)	B (max)	C Attaching hardware	Jaw opening (min)	Spring pressure (lbs) (min)	Nominal current rating (amp)	Material	Metal thickness (min)	Lugs		
									Inside diameter	AWG cable size (min)	Wall thickness (min)
1	4.75 (120.65)	.81 (20.57)	10-32 UNF-2A 5/16 LG.	1.06 (26.92)	18	100	Copper	.0478 (1.21)	.353 (8.97)	No. 4	.0420 (1.07)
2	6.25 (158.75)	1.12 (28.45)	1/4-20 UNC-2A 7/16 LG., washer lock, split for size 1/4 screw nut, hex 1/4-20 UNC-2B	1.62 (41.15)	24	200	Copper	.0610 (1.55)	.545 (13.84)	No. 1	.0420 (1.07)
3	8.00 (203.20)	1.44 (36.58)	5/16-18 UNC-2A x 1/2 LG., washer, lock split for size 5/16 screw nut, hex 5/16 18 UNC-2B	2.00 (50.80)	35	300	Copper	.0750 (1.91)	.668 (16.97)	No. 4/0	.0720 (1.83)

FIGURE 7. Type PCL clip, electrical.

A-A-59466

NOTES:

1. Dimensions are in inches.
2. Metric equivalents are given for general information only.
3. Millimeters are in parentheses.
4. Items have solder type, copper lugs.
5. A pin hinge is required.
6. All items shall incorporate a solid copper shunt positioned to prevent overheating of the spring.
7. Drawing depicts only general design characteristics and is not intended to limit specific manufacturing processes.
8. Interlocking neck construction is required.
9. Insulator sets (see 3.2.1).

FIGURE 7. Type PCL clip, electrical - Continued.

3.7.8 Type NC electrical clip. Type NC electrical clips shall be of the design, construction, and physical dimensions specified on figure 8 and shall be furnished with a screw-type conductor accommodation and insulation clamping ears.

Item number	A (max)	B (max)	C Attaching hardware	Jaw opening (min)	Spring pressure (lbs-min)	Nominal current rating (amp)	Material	Metal thickness (min)
1	2.38 (60.45)	.38 (9.65)	6-32 UNC-2A X 3/16 LG.	.50 (12.70)	6	20	Copper	.0300 (.76)

NOTES:

1. Dimensions are in inches.
2. Metric equivalents are given for general information only.
3. Millimeters are in parentheses.
4. Drawing depicts only general design characteristics and is not intended to limit specific manufacturing processes.
5. Item number 1 shall have a phosphor bronze spring and a brass screw.
6. Interlocking neck construction is required.

FIGURE 8. Type NC clip, electrical.

3.7.9 Type BC electrical clip. Type BC electrical clips shall be of the design, construction, and physical dimensions specified on figure 9 and shall be furnished with both screw-mounted, solder-type lug and an integral solder bridge conductor accommodation. Insulating clamping ears shall also be provided.

3.7.9.1 Insulated portions. Insulated portions shall be nonrigid polyvinyl-chloride.

3.7.9.2 Hinge pin. The upset end shall be concentric with the rivet diameter and shall have like appearance to the rivet head.

Item number	Jaw opening (min)	A (max)	B (max)	Spring pressure (lbs-min)	Nominal current rating (amp)	Insulator color	Material	Metal thickness (min)
1	1.50 (38.10)	4.81 (122.17)	6.50 (165.10)	10	200	Red	Copper	.0480 (1.22)
2						Black		

NOTES:

1. Dimensions are in inches.
2. Metric equivalents are given for general information only.
3. Millimeters are in parentheses.
4. Shaded areas indicates insulated portion.
5. Drawing depicts only general design characteristics and is not intended to limit specific manufacturing processes.

FIGURE 9. Type BC clip, electrical.

TABLE I. Dash number identification.

Dash number AA59466-	Type clip	Item number	Figure number
001	TCM	1	1
002	TC	1	2
003	TCI	1	3
004	TCC	1	4
005	CC	1	5
006	PC	1	6
007	PC	2	6
008	PC	3	6
009	PC	4	6
010	PCL	1	7
011	PCL	2	7
012	PCL	3	7
013	NC	1	8
014	BC	1	9
015	BC	2	9

4. REGULATORY REQUIREMENTS.

4.1 Recycled/recovered materials. The offeror/contractor is encouraged to use recovered materials to the maximum extent practicable, in accordance with paragraph 23.403 of the Federal Acquisition Regulation (FAR).

5. QUALITY ASSURANCE PROVISIONS.

5.1 Product conformance. The products provided shall meet the salient characteristics of this CID, conform to the producer's own drawings, specifications, standards, and quality assurance practices, and be the same product offered for sale in the commercial market. The Government reserves the right to require proof of such conformance.

5.2 Market acceptance. The following market acceptance criteria are necessary to document the quality of the product to be provided under this CID:

- a. The company producing the item must have been producing a product meeting the requirements of this CID for at least 2 years.
- b. The company must have sold 200 units meeting this CID in the commercial marketplace over the past 2 years.

6. PACKAGING.

6.1 Preservation, packing, and marking. Preservation, packing, and marking shall be as specified in the contract or order.

6.2 Hardware. Unattached hardware, such as insulators, machine screws, and rivets shall be physically protected and enclosed within the unit package.

7. NOTES.

7.1 PIN. The PIN should be used for Government purposes to buy commercial products to this CID. See section 2 for PIN format example.

7.2 Commercial and Government Entity (CAGE) code. For ordering purposes, inventory control, and submission of these electrical clips to DSCC under the Military Parts Control Advisory Group (MPCAG) evaluation program, CAGE code 58536 should be used.

7.3 Source of documents.

Federal Specifications

- QQ-W-428 - Wire, Steel, Carbon, (High Carbon, Round, for Mechanical Springs, General Purpose).
- ZZ-R-765 - Rubber, Silicone (General Specification).

Federal Standard

- FED-STD-H28 - Screw-Thread Standards for Federal Services.

(Copies of federal specifications and standards are available from the Defense Automated Printing Service, Building 4D (DPM-DODSSP), 700 Robbins Avenue, Philadelphia, PA 19111-5094.)

Other Publications

AMERICAN SOCIETY FOR TESTING AND MATERIALS (ASTM)

- ASTM A228 - Standard Specification for Steel Wire, Music Spring Quality
- ASTM B134 - Standard Specification for Brass Wire
- ASTM B159 - Standard Specification for Phosphor Bronze Wire
- ASTM B194 - Copper-Beryllium Alloy Plate, Sheet, Strip, and Roller Bar.
- ASTM B196 - Rod and Bar, Copper-Beryllium Alloy.
- ASTM B197 - Copper-Beryllium Alloy Wire.

(Application for copies should be addressed to the American Society for Testing and Materials (ASTM), 100 Barr Harbor Drive, West Conshohocken, PA 19428-2959.)

(Industry association specifications and standards are generally available for reference from libraries. They are also distributed among technical groups and using Federal agencies.)

7.4 Ordering data. The contract or order should specify the following:

- a. CID document number, revision, and CID PIN.
- b. Quality assurance provisions.
- c. Packaging requirements.
- d. Whether or not insulator sets are to be furnished with clips (see 3.2.1).
- e. When applicable, the proportion of red and black for insulator sets, if other than half and half (see 3.2.1).

A-A-59466

7.5 Commercial products. As part of the market analysis and research effort, this CID was coordinated with the following manufacturers of commercial products. At the time of CID preparation and coordination, these manufacturers were known to have commercial products that would meet the requirements of this CID. (NOTE: This information should not be considered as a list of approved manufacturers or be used to restrict procurement to only the manufacturers shown.)

MFGR's CAGEMFGR's name and address
