

DATA ITEM DESCRIPTION

Title: Electromagnetic Interference Survey (EMIS) Test Report

Number: DI-EMCS-81777

Approval Date: 20090915

AMSC Number: N9082

Limitation:

DTIC Applicable: N/A

GIDEP Applicable: N/A

Office of Primary Responsibility: SH/05H3

Applicable Forms:

Use/Relationships: The EMIS provides the information necessary to evaluate compliance of an equipment/system with the shipboard electromagnetic compatibility requirements, including mitigation techniques and discussion of recommended corrective actions, if required. .

This Data Item Description contains the format and content preparation instructions for the EMIS documenting the test results of the approved and executed EMIS for compliance of MIL-STD-1605 requirements.

This DID is related to DI-EMCS-81782.

Requirements:

1. Reference documents: The applicable issue of the documents herein, including their approval dates and dates of any applicable amendments, notices, or revisions, shall be as cited in the solicitation or contract.
2. Format: The EMIS test report shall be in contractor format .
3. Content. The EMIS shall contain signature certification by a qualified representative of the executing activity and shall also include the following:
 - a. Ships name, hull number, location of the ship, and the date when each test phase was conducted. Ships construction status, i.e. modernization, overhaul, builders trials.
 - b. Executive summary containing a brief description of the test results, amendments to the approved test report, rationale for amendments, and any pertinent issues.

DI-EMC-81777

- c. Authentication and certification of performance of the tests by the test engineer of the executing activity.
 - d. Listing of all equipments tested per compartment.
 - e. Photographs or diagrams of the actual test set up with identification of all items.
 - f. Data sheets/analyzer plots of measured data for all systems tested during Phase I and discussion of any interference and level of potential interference.
 - g. Data sheets for each equipment monitored during Phase II testing with mode of operation during testing.
 - h. Criteria used to evaluate susceptibility of equipment and calculations, such as conversions of measured levels for comparison against applicable limit.
 - i. Analytic discussion of each case of interference recorded and recommendations or mitigation measures used to eliminate the interference.
- 3.1. Details relative to the IMI test including the following:
- a.. The frequency, power, modulation and model number of transmitters used
 - b. The model number of receiver used
 - c. The description and location of all antennas used for each IMI test
 - d. The frequency and level of the 3rd order intermodulation interference
 - e. The highest IMI order detected
 - f. The corrective action taken to reduce IMI to or below the 19th order.
- 3.2. Conclusions that identify:
- a. Status of compliance with requirements (met or not met).
 - b. Impact of the results on operational performance
- 3.3. Recommendations to:
- a. Any required corrective actions, modifications, or changes to operational procedures, manual, or processes.
 - b. Any additional verification actions, investigations, resolutions, or studies.
4. End of DI-81777
