# **DATA ITEM DESCRIPTION**

Title: Contract Work Breakdown Structure (CWBS)Number:DI-MGMT-81334BAMSC Number:D7548DTIC Applicable:OPreparing Activity:(D) OSD/PA&E/CAIGApplicable Forms:Not Applicable; 35 hours

Approval Date: 20050201 Limitation: GIDEP Applicable:

**Use/relationship:** This documents the Contract Work Breakdown Structure (CWBS) and its extension by the contractor using terminology and definitions, as applicable, in MIL-HDBK-881. The complete Program Work Breakdown Structure (PWBS) will serve as a basis for program and technical planning, scheduling, cost estimating, resource allocations, performance management where appropriate, configuration management, and status reporting.

This DID summarizes the format for the WBS and provides preparation instructions to support the specific data and frequency requirements specified in the contract. This DID is applicable to all contracts that require a WBS and is related to the two Contractor Cost Data Reporting (CCDR) formats: DD Form 1921, "Cost Data Summary Report" (DID number DI-FNCL-81565A), and DD Form 1921-1, "Functional Cost-Hour and Progress Curve Report" (DID number DI-FNCL-81566A). This DID can also be related to the formats contained in DD Forms 2734/1, 2734/2, 2734/3, 2734/4, and 2734/5, "Cost Performance Report" (DID number DI-MGMT-81466); DD Forms 2735, "Cost/Schedule Status Report, (DID number DI-MGMT-81467); and DD Form 1586, "Contract Funds Status Report" (DID number DI-MGMT-81468).

Routine reporting shall be at CWBS level 3 for prime contractors and key subcontractors. MIL-HDBK-881 serves as the basis for identifying the first three levels of the PWBS and for developing the CWBS. Extensions of the PWBS and CWBS can be tailored to the specific program but will be consistent with MIL-HDBK-881. Detailed reporting of the CWBS (i.e., below level 3) shall be required only for those lower-level elements that address high-risk, high-value, or high-technical-interest areas of a program. Identifying these additional elements is a critical early assignment for the Cost Working Level Integrated Product Team (CWIPT) for inclusion in the PWBS. The final CWBS must agree with the contract Cost and Software Data Reporting (CSDR) Plan approved by the OSD Cost Analysis Improvement Group (CAIG) Chair,

The reporting contractor shall prepare and submit the contract dictionary within 60 days of contract award. The reporting contractor shall maintain and update the WBS Dictionary throughout the life of the contract. The dictionary shall not be submitted more frequently than report submissions.

#### **Requirements:**

1. *Reference documents*. Detailed instructions for preparing the CWBS can be found in MIL-HDBK-881. WBS guidance is also contained in Chapter 2 of the CCDR Manual, DoD 5000.4-M-1.

# **DI-MGMT-81334A**

2. *Formats.* The CWBS shall be reflected in an electronic report that consists of two parts as shown in the sample attachments. Part I is for the CWBS Index and Part II is for the CWBS Dictionary. The index lists the individual elements. The dictionary describes the effort and tasks associated with every CWBS element shown in Part I.

### **Preparation Instructions:**

- 1. Contract Work Breakdown Structure Index:
  - a. <u>CWBS Code</u>. Enter the code, if applicable.
  - b. <u>CWBS Element Level</u>. Enter the level of the CWBS element. Level 1 is the total contract. Levels 2, 3, etc., are successively lower levels of the program.
  - c. <u>CWBS Element Name</u>. Enter the title of the CWBS element using the specific name or nomenclature.
  - d. <u>Contract Line Item(s)</u>. Enter the numbers of the contract line items associated with the CWBS element, if applicable.
- 2. Contract Work Breakdown Structure Dictionary:
  - a. CWBS Code.
  - b. <u>CWBS Element</u>. Enter the title of each CWBS element in the same order as given in Part I.
  - c. <u>CWBS Definition</u>. Enter a complete description of the technical and cost content of each CWBS element. The statement should be as descriptive as possible about the efforts, tasks, tests, components, etc., that are to be included in the CWBS element by the contractor. The CWBS Dictionary must be updated and maintained throughout the life of the contract. However, the updated dictionary shall be submitted no more frequently than the CCDR report submissions.

### Contract Work Breakdown Structure—Data Item Description (DI-MGMT-81334)

CONTRACT WO	ORK BREAKDOWN	PROGRAM:		RFP NO:	DATE:	
STRUCTUR	E DICTIONARY	Missile X LRIP	Surface-to-Air Interceptor	CONTRACT NO: XXXXX-98-C-XXXX	11/1/00	
CWBS CODE	CWBS ELEN	ENT	CWBS DEFINITION			
1.0	Missile System		The missile is a cylindrical body with four fixed fins attached to the aft end of the Solid Rocket Motor case. The control surfaces are located behind the fixed fins. The missile angular orientation is zero degrees at top center, with increasing angles positive in a clockwise direction (standing at the aft end looking forward). The outside surface of the missile body is coated for thermal protection of the structure from aerodynamic heating and rain erosion. Electrical interface between the launcher and the missile is provided by an umbilical cable connecting the missile Aft-Section to the Aft-Section of the Canister.			
1.1	Air Vehicle		This element refers to the means for delivering the destructive effect to the target, including the capability to generate or receive intelligence to navigate and penetrate to the target area and to detonate the warhead. This element includes the design, development, and production of complete units (prototype and operationally configured units, which satisfy the requirement of their applicable specifications(s)) regardless of their use.			
1.1.1	Propulsion		The propulsion system consists or provides all of the boost impulse f positioned at the aft end of the bo	em consists of the booster and the interstage. A single-stage, solid propellant rocket motor oost impulse for the missile. The deployable flares and aft rate gyro package (RGP) are end of the booster in the BUG configuration.		
1.1.2	Airframe		This element refers to the structural framework that provides the aerodynamic shape, mounting surfaces and environmental protection for the missile components. It includes the wings, fins, and structural body assemblies.			
1.1.3	Warhead		Warhead includes the assembly containing the kill mechanism of the round and its associated high explosives chemicals, biological agents, nuclear devices, and pyrotechnics.			
1.1.4	Post Boost System		This element provides the roll rate control and the final velocity to adjust and deploy the payload as well as the external protection material, velocity control system, and deployment group.			
1.1.5	Guidance and Control Equi	pment	This element refers to the missile sensors and execute the necessa	refers to the missile's ability to acquire and track targets, receive guidance data from various execute the necessary flight path to intercept the target.		
1151	Cuidanas Castian		This element refers to the missile	's ability to receive guidance data from various sensor	S.	
1.1.5.1	Seeker		The seeker assembly is attached to the kill vehicle via the forward ring of the forecone. The assembly consists of four elements; a seeker basecone, an IR sensor, a gimbal set, and a Seeker Electronics Assembly (SEA). The seeker basecone is a conical assembly cast from magnesium. It is used as the main structure to mount the IR sensor and gimbals to the KV, and to dampen structural resonances.			
1.1.5.1.2	Guidance Electronics		This element includes all the elect tracking functions.	tronic components and their structural items needed t	o perform all the seeker	
1.1.5.2	Control Devices		This element includes all the elec processing done outside, but nea preamplification, gain control proc detector outputs are present.	tronic components and support structure needed to p ir the detector assembly. This may include detector bi cessing, A/D conversion and multiplexing of the detec	erform the electronic asing electronics, or outputs when many	
1.1.5.3	Structure		This element refers to the metal of and connectors for guidance and	or composite materials that provide external housing, control equipment.	oulkheads, attach points	
1.1.5.4	Power and Networks		This element refers to the subsys release from the launch platform, converters.	tem that starts the missile and maintains electrical por and during flight. Additionally, it consists of power sup	ver prior to launch, upon ply devices and power	
1.1.6	Ordnance Initiation Set		The ordnance initiation set initiate reentry system components). Up the ordnance initiation set firing u these ordnance events are stage Includes through bulkhead initiato	es all ordnance events throughout the missile and grou on receipt of an electrical signal from the missile guida nits convert the signal into ordnance outputs to the de separation, motor ignition, gas generator ignition, shr rs, ordnance test harnesses, and firing units/explodin	Ind system (except ince and control system, tonating cords. Among oud separation, etc. g bridge wires.	
1.1.7	Airborne Test Equipment		The airborne test equipment elen warhead and suitable for develop special instrumentation, and teler	nent refers to an exercise warhead that is interchange mental firing. This element includes destruct systems netry equipment.	able with the live , recovery systems,	
1.1.8	Airborne Training Equipment		The airborne training equipment element refers to an exercise warhead that is interchangeable with the live warhead and suitable for training firing. This element includes destruct systems, recovery systems, special instrumentation, and telemetry equipment associated with the training mission.			
1.1.9	Auxiliary Equipment		The auxiliary equipment element elements. This element includes system. It also includes equipmen assigned mission.	quipment element refers to that additional equipment generally excluded from other specific selement includes the environmental control, safety and protective subsystems, and destruct includes equipment of a single purpose and function that is necessary for accomplishing the ion.		
1.1.10	Integration, Assembly, Test	and Checkout	The IAT&CO of the hardware will will be assembled and tested, the	be conducted at the contractor's assembly facility. Su In shipped to company YYYY for final assembly and t	ıbsystem components esting.

CWBS CODE	CWBS ELEN	IENT	CWBS DEFINITION			
1.2	Integration, Assembly, Tes Systems Engineering/Prog	i, and Checkout ram	The IAT&CO of the missile will be conducted at a Company YYYY assembly facility. For flight vehicles, the guidance and control unit is tested and installed, the units are fueled, and the ordinance is installed. The missile is then installed in the canister and shipped to the testing range. The system engineering and technical control as well as the business management of the project. System Engineering/Project Management effort that can be associated specifically with the hardware element is excluded, unless this management effort is of special contractual or engineering significance (e.g., associated contractor). Four prototypes of the missile will be tested at WWWW testing range over a period of 3 months. The testing facility will evaluate both missile performance and accuracy, along with the launching platform capabilities.
