## Block 10. PREPARATION INSTRUCTIONS (Continued)

10.4 Content. The plan shall include (1) a summary of the contract quality requirements and (2) a relational matrix. The relational matrix shall indicate the general relationship between the contractors quality system procedures / processes and the applicable elements (see Table IA and IB) of the quality document(s) cited in the contract. The matrix, or an attachment thereto, shall also identify schedules for quality activities and tasks which must be coordinated and compatible with other schedules prepared for work under the contract, as well as include the name(s) of the person(s) responsible for accomplishment of activities and tasks. Tables IA and IB establish the elements of the plan based on the quality system document(s) cited in the contract. In addition, Tables IA and IB indicate the general relationships between the quality system elements, the quality standards and a commonly accepted internal quality system guideline, ANSI / ASQC 94.

10.4.1 Quality System Effectiveness. The plan shall identify the means by which the contractor will ensure quality system effectiveness and demonstrate comprehensive management and review of data, such that the results may be used to indicate trends and progress in quality of design, processes, fabrication, assembly, test and acceptance as appropriate to the contract. The plan shall describe what is measured, how often it is tracked, and who reviews and assures that appropriate action is initiated when trends are unfavorable.

10.4.2 All updates shall consist of notes or changes to the plan, clearly identified as to where applicable (i.e. system element, page, paragraph, number etc.).

10.5 Attachments. A copy of the contractor's quality manual which describes the current quality system shall be attached.
