INCH-POUND J-W-1177/18B June 10, 1988 SUPERSEDING J-W-1177/18A September 27, 1976

FEDERAL SPECIFICATION SHEET

WIRE, MAGNET, ELECTRICAL, CLASS 220, TYPE M, POLYIMIDE-COATED, RECTANGULAR

This specification is approved by the Commissioner, Federal Supply Service, General Services Administration, for the use of all Federal agencies.

The requirements for acquiring the wire described herein shall consist of this specification and the latest issue of J-W-1177.

Classification:	Class 220; type M2 (heavy), type M4 (quadruple); rectangular.
Insulating materials: NEMA/ANSI equivalent:	The film shall be based on a polyimide resin. All test requirements except thermal endurance are equivalent to MW-20 of NEMA MW 1000.
General requirements:	See J-W-1177 for general requirements, quality assurance provisions, and packaging.

Requirements:

Characteristics	Test procedure, see J-W-1177	Wire sizes, AWG	Requirements
Dimensions	4.7.1.2	A11	<pre>Rectangular wire: (a) Conductor dimensions and radii - see table I. (b) Conductor tolerances - see table II. (c) Increase in thickness and width - see table III. Square wire: (a) Conductor dimensions, radii and tolerances - see table IV. (b) Increase in thickness and width - see table IV.</pre>
Adherence and flexibility	4.7.2.1	A11	No cracks visible in the film coating.

AMSC N/A FSC 6145 DISTRIBUTION STATEMENT A Approved for public release; distribution unlimited

.

Requirements:	(Continued)		
Characteristics	Test procedure, see J-W-1177	Wire sizes, AWG	Requirements
Elongation	4.7.5	A11	Not less than 32 percent for thicknesses of 0.049 inch and greater, or 30 percent for thicknesses less than 0.049 inch.
Heat shock	4.7.4	A11	No cracks visible in the film coating after 15 percent elongation followed by conditioning at 240°C.
Dielectric strength	4.7.9	A11	Not less than the values shown in table V.
Completeness of cure	4.7.16.2	A11	Dissipation factor not greater than 0.60 percent.
Thermoplastic flow	4.7.8	18 AWG	Median not less than 400°C with heavy film coated wire.
Solubility	4.7.12	A11	The specimens shall not soften sufficiencly to expose bare conductor when immersed in xylene or 50/50 parts by volume xylene/ethyl Cellosolve.
Dielectric strength at temperature	4.7.14	18 AWG	Heavy film coated wire shall average not less than 4275 volts.
Thermal endurance	4.7.15.1	18 AWG	220°C minimum with heavy film coated wire.
	4.7.15.3	A11	240°C minimum as shown in table IV.

Dimensions and radii for rectangular wire. TABLE I.

> Radii tolerance is plus or minus 25 percent. R-40 series numbers. ٦

Intermediate sizes

EXAMPLE - Preferred sizes

J-W-1177/18B

Thickness, inch	Permissible variations in thickness
0.280 to 0.098 Under 0.098 to 0.025 <u>Width, inch</u>	+ 1 percent + 0.001 inch
Over 0.492 0.492 to 0.315 Under 0.315 to 0.098 Under 0.098 to 0.063	$\begin{array}{c} + 1 \text{ percent} \\ + 0.003 \text{ inch} \\ + 1 \text{ percent} \\ + 0.001 \text{ inch} \end{array}$

TABLE II. Conductor tolerances.

TABLE III. Increase in thickness and width due to film coating.

	Increase in	n width, inch	Increase in t	hickness, inch
Туре	Minimum	Maximum <u>l</u> /	Minímum	Maximum <u>l</u> /
Heavy, M2 Quadruple, M4	0.0025 0.0040	0.0045 0.0060	0.0030 0.0050	0.0050 0.0070

1/ The maximum increase may be exceeded provided the maximum overall dimensions of the coated wire does not exceed the sum of the maximum dimensions of the bare wire plus the maximum increase due to the coating.

TABLE IV. Dimensions of square wire, sizes 1 to 14 AWG.

					Heavy, t	ype M2	Quadruple	, type M4
	Bare wi	re dimer inch	nsions,		Minimum increase in	Maximum overall	Minimum increase in	Maximum overall

14	.0631	.0641	.0651	.016	.0030	.0701	.0050	.0721

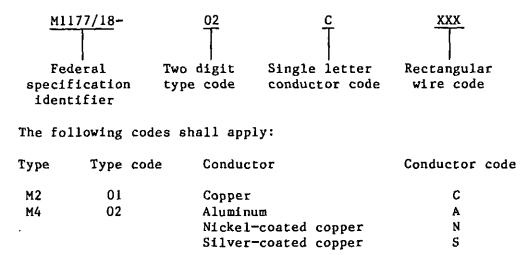

1/ Radii tolerance is plus or minus 25 percent.

J-W-1177/18B

TABLE V. Minimum breakdown voltage

Туре	Volts Any three out of four electrodes	Fourth electrode
M2	1500	500
M4	2500	900

Part number: Magnet wire covered by this specification shall be defined by the following part numbering system. Example: M1177/18-02CXXX.

Intended use: Type M rectangular magnet wire is intended for use in 220°C applications similar to those for which type M round magnet wire is used. Type M magnet wire has been standardized for the repair of shipboard electrical power equipment.

Revision letters are not used to denote changes due to the extensiveness of the changes.
