INCH-POUND J-W-1177/34 June 10, 1988

### FEDERAL SPECIFICATION SHEET

# WIRE, MAGNET, ELECTRICAL, CLASS 180, TYPE Dg0, POLYESTER-GLASS-FIBER-COVERED, ORGANIC VARNISH TREATED, RECTANGULAR

This specification is approved by the Commissioner, Federal Supply Service, General Services Administration, for the use of all Federal agencies.

The requirements for acquiring the wire described herein shall consist of this specification and the latest issue of J-W-1177.

Classification:	Class 180; type Dg20 (bare with double polyester-glass fiber covered, varnished), type L2Dg0 and type L2Dg20 (heavy film, single or double polyester-glass fiber covered, varnished); rectangular.
Insulating materials:	
NEMA/ANSI equivalent:	All test requirements are equivalent to MW-53 of NEMA MW 1000.
General requirements:	See J-W-1177 for general requirements, quality assurance provisions, and packaging.

AMSC N/A <u>DISTRIBUTION STATEMENT A</u> Approved for public release; distribution unlimited

### 1 of 12

Requirements:			
Characteristics	Test procedure, see J-W-1177	Wire sizes, AWG	Requirements
Dimensions	4.7.1.2	A11	<pre>Rectangular wire: (a) Conductor dimensions and radii - see table I. (b) Conductor tolerances - see table II. (c) Increase in thickness - see table III (type L2DgO), table IV (type Dg2O) and table V (type L2Dg2O). (d) Increase in width due to the glass fiber covering shall be equal to or less than the increase in thickness. Square wire: (a) Conductor dimensions, radii</pre>
Adherence and flexibility	4.7.2.3.1	A11	<ul> <li>and tolerances - see table</li> <li>VI.</li> <li>(b) Increase in thickness and</li> <li>width - see table VI.</li> <li>For bare wire, not less than 75</li> <li>volts/mil of minimum thickness</li> <li>of the glass fiber covering on</li> <li>one side.</li> </ul>
	4.7.2.3.2	A11	For film coated wire, no cracks visible in the film coating after 20 percent elongation. Examine with normal vision without removal of the glass fiber covering.
Elongation	4.7.5	A11	Not less than 32 percent for thicknesses of 0.049 inch and greater, or 30 percent for thicknesses less than 0.049 inch.
Dielectric strengt	h 4.7.9	A11	Not less than 90 volts/mil of the minimum thickness of the glass fiber covering on one side (one-half the minimum specified under "Dimensions") plus the minimum breakdown for film coated wire.
Thermal endurance		All	Class 180. Insulating materials shall meet the thermal class ratings described above.

1/ R-40 series intermediate numbers.

EXAMPLE - Preferred size 0.055 x 0.110 (R-20 x R-20) Intermediate size 0.055 x 0.118 (R-20 x R-40)

- The maximum increase due to the film and fiber covering may be exceeded provided the overall dimension of the covered wire does not exceed the sum of the maximum thickness of the bare wire plus the maximum increase due to the heavy film coating and single polyester glass fiber covering.
- 2. The increase in thickness due to the heavy film coating shall be for film coated wire.
- 3. The increase in thickness due to the single polyester glass fiber covering shall be determined by subtracting 0.005 inch (0.127 mm) (maximum thickness of film coating) from the maximum increase in thickness given in the table.
- 4. The increase in width due to the polyester glass fiber covering shall be equal to or less than the maximum increase in thickness given in the table. Note 1 applies to the increase in width as well as the increase in thickness.
- 5. Because it is impossible to accurately separate the polyester glass fiber covering from the film coating, the total minimum increase in the thickness of the film-coated glass fiber covered rectangular wire shall be the sum of the minimum increase due to the film coating (as shown for film-coated wire) and the minimum increase due to the polyester glass-fiber covering. The total minimum increase shall be not less than 70 percent of the maximum increase given in the table above, rounded to the nearest 0.001 inch (0.025 mm).
- 6. For direct conversion of inches to millimeters, multiply inches by the factor 25.4 (exact).
