1. SCOPE

1.1 Scope. The purpose of this handbook is to identify each service's primary repository organizational concept, type of data available, and address information (including DODAAC and EDRS control activity code).

1.2 Controls. It is the responsibility of all personnel that use engineering data to obey appropriate handling, storage, distribution, and disposal controls; particularly, if the data are marked with a restrictive legend. Data marked with a restrictive legend must be safeguarded against release or access to unauthorized personnel (Government and non-Government).

4.2.1.1 DoD nuclear data repositories. Within the DoD, nuclear data are controlled and stored within three special repositories that operate under a centralized concept; specifically, the Air Force on Kelly Air Force Base, Texas, the Navy at the United States Ships Parts Control Center Mechanicsburg, Pennsylvania, and the Army on Picatinny Arsenal, New Jersey. As appropriate, each repository is assigned service unique types of nuclear data. DLA does have a special nuclear data repository.

4.2.2 Cryptologic data repository. Within the Air Force, service unique cryptological data are controlled and stored in a repository that operates under a centralized concept. The centralized repository function is located within the Air Force Security Command; specifically, on Lackland Air Force Base, Texas.

4.2.3 Atomic energy detection system data repository. Within the Air Force, service unique atomic energy detection system data are controlled by a HQ USAF Direct Reporting Unit (HQ AFTAC/LG, Patrick Air Force Base, Florida). The data are stored in a repository that operates under a centralized concept. The centralized repository function is located on McClellan Air Force Base, California.

4.3 Directory information. Directory information for the special repositories is not provided in Section 5; the information is identified below. The mailing address, AUTOVON, commercial telephone number, DODAAC, and EDRS control activity code are identified.

4.4 Military engineering data asset locator system. MEDALS is associated with DoD primary repositories that use an EDCARS, DSREDS, or EDMICS storage file. On-line and dial-up access can be accomplished through the Defense Data Network (DDN) or the DLA Network (DLANET). When completed, identification of specific engineering data document numbers (in accordance with each service's control procedures) will be indexed in the MEDALS data base. If the document is indexed, a MEDALS user can determine the location of the DoD primary repository by entry of a document number.

INSTRUCTIONS: In a continuing effort to make our standardization documents better, the DoD provides this form for use in submitting comments and suggestions for improvements. All users of military standardization documents are invited to provide suggestions. This form may be detached, folded along the lines indicated, taped along the loose edge (**DO NOT STAPLE**), and mailed. In block 5, be as specific as possible about particular problem areas such as wording which required interpretation, was too rigid, restrictive, loose, ambiguous, or was incompatible, and give proposed wording changes which would alleviate the problems. Enter in block 6 any remarks not related to a specific paragraph of the document. If block 7 is filled out, an acknowledgement will be mailed to you within 30 days to let you know that your comments were received and are being considered.

NOTE: This form may not be used to request copies of documents, nor to request waivers, deviations, or clarification of specification requirements on current contracts. Comments submitted on this form do not constitute or imply authorization to waive any portion of the referenced document(s) or to amend contractual requirements.
