**PERFORMANCE SPECIFICATION SHEET
VECTOR VERTICAL OBSTRUCTION DATA (VVOD)**

This specification is approved for use by all Departments and Agencies of the Department of Defense.

1. SCOPE

1.1 Scope. This specification sheet defines the content and format for the U.S. National Geospatial-Intelligence Agency (NGA) Vector Vertical Obstruction Data (VVOD) product. References to the VVOD specifications in this document assume use of both the general specification (MIL-PRF-89049A, dated 15 December 2005) and this specification sheet.

1.2 Purpose. The VVOD is a vector-based digital product that portrays vertical obstruction data. The VVOD also functions as a mission specific data set designed to support Geographic Information System (GIS) applications. The VVOD database contains data concerning known vertical obstructions worldwide. The vertical obstruction data stored in the database includes all of the manmade and natural vertical obstructions known by NGA projecting above the Earth's surface which are sufficiently tall so as to pose a hazard to powered flight, both manned and unmanned. This specification sheet provides a description of the content, accuracy, data format, and design of the VVOD database.

3. REQUIREMENTS

3.1 First article. When specified (see 6.2), a sample shall be subjected to first article inspection in accordance with MIL-PRF-89049A, Section 4.2.

3.2 Accuracy. Vertical obstruction data is derived in conjunction with, or as a by-product of, routine production programs. Each program has its own minimum height requirement and accuracy requirements for obstructions. Regardless of the accuracy, any obstruction meeting the minimum height requirement of its parent program shall be entered in the DMA Vertical Obstruction File (DVOF).

When new obstruction data are derived by NGA or by external, non-mapping, contributing organizations, then accuracies within the limits stated below should be sought. This will permit the obstruction data to meet the accuracy standards for portrayal on Class-2 1:250,000 or smaller-scale aeronautical charts. Production programs that use the resultant obstruction record but require a higher degree of accuracy are responsible for improving the obstruction data to the extent necessary. Those programs are in turn responsible for supplying the improved obstruction data to the DVOF Manager.

When these objectives cannot be met because of inadequate source materials, lack of datum transformation formula, or other deficiencies, the best information possible is derived and entered into the file. Quality of this data will be evident from the associated accuracy figures and deficiency code.

3.2.1 Absolute horizontal accuracy. The absolute horizontal accuracy of each obstruction is expressed in meters of circular error (CE) at 90 percent.

3.2.2 Absolute vertical accuracy. The absolute vertical accuracy of each obstruction is expressed in meters at 90 percent probability (.9p) linear error (LE) as a proportion of the contour interval or photo derived Digital Terrain Elevation Data (DTED).

3.2.3 Relative accuracy. NGA does not have a formal relative accuracy defined for this product.

3.3 Datum.

MIL-PRF-89049/9A

3.3.1 Horizontal datum. The horizontal datum shall be referenced to WGS84. If the source map/chart sheets are not referenced to WGS84, then they will be converted from their original horizontal datum to WGS84.

3.3.2 Vertical datum. Vertical measurements are referenced to the WGS84 Geoid adjusted using the EGM96. Height data is entered in both Above Ground Level (AGL) and Above Mean Sea Level (AMSL).

3.4 Coordinate system. VVOD data libraries shall implement a decimal degree geographic coordinate system. The horizontal coordinate resolution for geographic coordinates shall be 0.01 arc-seconds or 0.000002 decimal degrees.

3.5 Security.

3.5.1 Security classification. The security classification of the products generated by the use of these specifications will be the lowest category practicable. When it is necessary to assign a security classification to the product, it shall be in accordance with established national security procedures.

3.5.2 Security classification of product. VVOD data sets vary in classification depending on the geographic location covered by the data. Data set output classification can range from Secret Collateral to Unclassified, depending on the data information and accuracy of the data required. The data sets will carry the classification of the most restrictive classification of any tile or library of the VVOD databases. The lowest possible classification of the final product is desired.

3.5.2.1 Handling caveat. Even though the thematic files might be unclassified, a handling caveat could be required. Some NATO and other countries have mapping and other agreements that dictate the handling of materials produced over their country. Security elements should check for caveat requirements at the beginning of each project.

3.5.3 Security classification of specification. This performance specification is UNCLASSIFIED.

3.6 Continuity. All VVOD data are subject to the portrayal criteria specified in Appendix C.

a. The VVOD product and database shall be organized into multiple VPF libraries such that a seamless product is produced where data are present. Data gaps between VVOD libraries may exist due to an absence of data. No data overlap shall exist in the libraries of the VVOD database.

3.7 Thematic layer organization. The VVOD is organized into thematic layers. Each thematic layer is stored as a single coverage. Each VVOD data library contains two reference coverages and up to two thematic layers (see Table 1).

TABLE 1. Thematic layers for the VVOD library.

VPF Structure Level	VVOD library thematic layers	Coverage name
Data Libraries	Library Reference Tile Reference Data Quality Obstructions	libref tileref dq obs

3.8 Dimensions. The minimum size of features collected from source materials shall be in conformance with the portrayal criteria and attribute values provided in the VVOD data dictionary, Appendix C. Features may be captured as points, nodes, or lines.

3.8.1. Units of measure. The unit of measure for VVOD is meters.

3.9 Feature and attribute coding scheme. VVOD implements the 10 April 2003 version of the NIMA Profile of FACC which is based on the Digital Geospatial Information Exchange Standard (DIGEST) Part 4, Feature and Attribute Coding Catalogue (FACC) to define features, attributes, and values. See Appendix D of this Specification for a listing of the FACC feature codes allowable for VVOD thematic files.

3.10. VVOD directory organization.

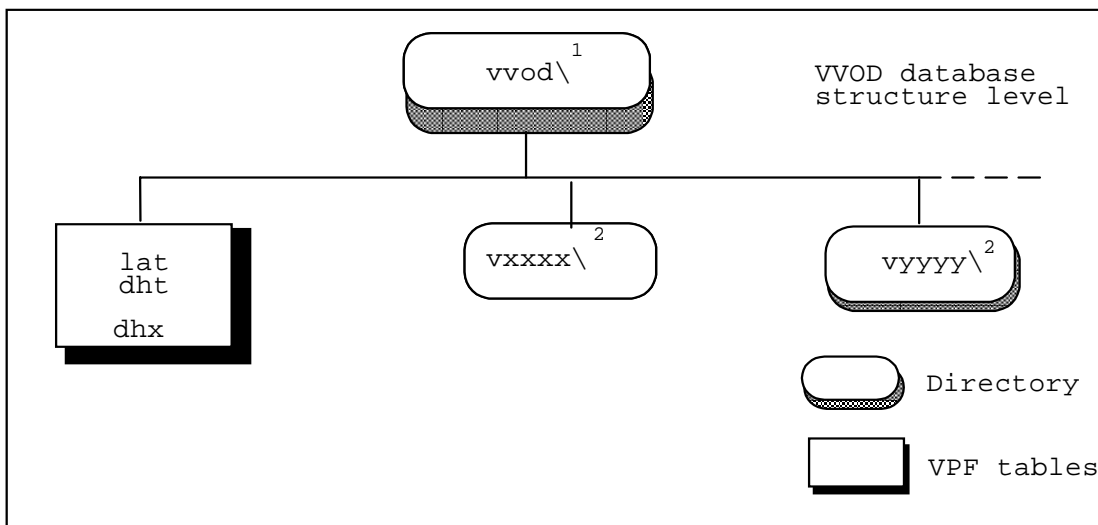

3.10.1. VVOD database. VVOD consists of a single database. Each data set shall contain a single database directory and one or more data library directories. The database header and library attribute tables shall be duplicated for each data set. Each data library contains a mix of reference coverages and thematic coverages. This thematically layered, relationally structured set of data supports Geographic Information System (GIS) applications, mission planning systems, flight management systems, and cockpit avionics systems.

3.11 VPF structure levels, tables and files. The following sections identify VPF structure information specific to VVOD. General database, library, and coverage level tables are defined in MIL-PRF-89049A. The VVOD specific content information for the database and library level metadata tables is described in Appendix B of this specification sheet. The record layout and content of the VVOD coverage tables and files are described in Appendix C of this specification sheet.

3.11.1 Database directory files.

a. VVOD consists of a single worldwide database. Each CD-ROM shall contain a single database directory and one or more library directories. The database header table and library attribute tables shall be duplicated for each CD-ROM within the database. Each data library contains a mix of reference coverages and thematic coverages. The tables and files contained in the VVOD database directory are described below. A representation of the tables and files appearing in the VVOD database level is depicted in FIGURE 1.

²These are representative directory names for VVOD libraries.

FIGURE 1. VVOD database directory.

b. As described in MIL-PRF-89049A, section 3.16.1, and Appendix B therein, the database directory contains three required metadata tables. The required tables include the Library Attribute Table (lat), Database Header Table (dht), and Database Header Table variable length index (dhx), see Table 2. Appendix B in this specification sheet defines the VVOD implementation of the database level metadata tables.

3.11.2 Database and library naming conventions.

a. The VVOD product will contain one worldwide database. The database name shall be vvod.

b. The VVOD library names are up to eight characters in length with the first character being 'v'. The remaining characters will be used to adequately represent the specific VVOD library.

3.11.3 Library directory files. The contents of each VVOD data library are stored in a directory, whose name shall be no more than eight

MIL-PRF-89049/9A

lower case alphanumeric characters in length. The entire contents of one or more VVOD libraries shall be contained in a data set. The size of the data set shall not exceed the maximum size limit allowable for the exchange medium (i.e., CD-ROM). A representation of the tables and files present in a VVOD library is provided in MIL-PRF-89049A, Figure 4. VVOD will not implement a reference library, as defined in MIL-PRF-89049A.

3.11.3.1 Library metadata. The library metadata tables and their content are described in MIL-PRF-89049A, section 3.16.2.1. Appendix B in this specification sheet defines the VVOD implementation of the library level metadata tables.

3.11.3.2 Library reference coverages. Each tiled VVOD data library shall contain the Tile Reference Coverage (tileref) and Library Reference Coverage (libref) as defined by MIL-PRF-89049A, Appendix D. The optional text feature class table in the tileref coverage shall not be implemented in VVOD.

3.11.4 Coverage directory files.

3.11.4.1 Coverage metadata. The coverage metadata tables and their content are described in MIL-PRF-89049A, section 3.16.3.1. Product specific information for VVOD is provided in Appendix C of this specification sheet.

3.11.4.2 Data coverages. In addition to the library reference coverages (see 3.11.3.2) there is one possible thematic data coverage directory present in any VVOD data library. Within a library, coverage directories shall not be included if data does not exist for that coverage within the library's geographic area. The contents of each VVOD data coverage are stored in a directory whose name shall be represented in lower case letters, with a three character name representative of the thematic layer name (i.e., obs for Obstructions coverage), as shown in Table 1. In addition, each VVOD library can contain a data quality (dq) coverage. The dq coverage contains information about the accuracy of the source(s) that were used to produce VVOD.

3.11.4.3 Coverage topology. The topology level of each coverage is specified in the coverage attribute table (cat) within each library, see MIL-PRF-89049A, section 3.16.2.1 and Appendix D. Topology is not supported between coverages. The cat for each library is tailored based on the coverages actually in the VVOD product. See Appendix B of this specification sheet for the definition of the VVOD cat containing all possible VVOD coverages.

3.11.5 Feature class structure level. VVOD feature classes for thematic coverages are shown in Table 3. Only those feature classes containing data shall be present in the coverage. Description of feature classes, with the exception of those located in the Data Quality (dq) coverage, are found in Appendix C of this specification sheet. For feature class descriptions of dq features, see MIL-PRF-89049A, Appendix E. VVOD will implement the optional text feature table in the dq coverage.

MIL-PRF-89049/9A

TABLE 3. VVOD thematic coverages and feature classes.

Coverage Name	Feature Classes				
	Point	Node	Line	Area	Text
dq			dqline	dgarea dqvoida	dqtxt
obs	aerop hydrop indp iwap popp transp utilp	aeroc hydroc indc iwac popc transc utilc	aerol indl iwal popl transl utill		

3.11.5.1 Feature table structure and contents. Feature tables will be implemented per MIL-PRF-89049A, section 3.16.4.2. In addition to implementing the required feature-to-primitive links using join tables for all line and area feature classes, VVOD will also implement the feature-to-primitive links using join tables for all point feature classes.

3.11.5.2 Related attribute tables.

3.11.5.2.1 Notes related attribute table. Digital marginalia refers to the information that originally appeared in notes, tables, and graphs on the borders of the hardcopy chart sheets. For the VVOD, this information is included in the Notes Related Attribute Table (notes.rat) in each coverage. The notes.rat shall be implemented for all feature tables (except for dqline, dgarea, and dqtxt), when appropriate, in accordance with MIL-PRF-89049A, section 3.16.4.3.1.

3.11.5.2.2 Symbol related attribute table. VVOD shall not implement the symbol related attribute table (symbol.rat) defined in MIL-PRF-89049A, section 3.16.4.3.

3.11.5.3 Text feature class. A text feature class is composed of a text feature table (*.tft) and a text primitive (txt) table. This primitive table contains information that may be used to replicate text strings found on an original chart or other source for representation on a plot or digital display. All text (both at the feature and primitive level) will be limited to the characters found in the Latin alphabet primary code table, FIGURE 24 of MIL-STD-2407.

3.11.6 Primitive tables and associated files. VPF uses the primitive tables defined in MIL-STD-2407 to model a feature's location, geometry, and topology. See MIL-PRF-89049A, section 3.16.5 for the format to be used for VPF primitive tables in VVOD. The data coverage in VVOD data libraries shall implement 2-dimensional (2D) geometry for the coordinates in the end, cnd, and edg primitive tables. The dq coverage as well as the tileref and libref coverages are 2-dimensional (2D), as per MIL-PRF-89049A. See Table 4 in this specification sheet for a definition of the field types to be used for the coordinate data in the primitive tables contained in the VVOD data libraries.

3.12 VVOD tiling schemes. VVOD data libraries shall be partitioned in a systematic tile structure based primarily on data density, see MIL-PRF-89049A, section 3.17. The tileref coverage defines the tiling scheme for each VVOD library. The tiling schemes for VVOD libraries will differ in their spatial extent and number of tiles per library.

3.12.1 VVOD tiling scheme. The VVOD database will contain data in variable sized tiles based on the GEOREF reference system as defined in the tileref of each library. The tiling scheme will change by library when data density indicates that smaller or larger tiles are desirable. The lower left (southwestern most) corner of each tile is identified using the GEOREF naming conventions described in MIL-PRF-89049A, section 3.17.2. This GEOREF identifier is used as the name for the directory containing the primitives contained in that tile.

3.12.2 Cross-tile topology. Cross-tile topology ensures that topology is retained between the primitive tables across the tile boundaries. Topology across the tiles is maintained through the use of a reference tile ID in the edge and connected node primitive tables that establishes a "cross-tile" link over the tile partitions. This enables the database to function as a seamless unit for analysis purposes.

3.13 Distribution medium. VVOD shall be distributed electronically, on CD-ROM disc, implementing ISO 9660 for CD-ROM formatting, or other media as required for customer support in accordance with MIL-PRF-89049A, sections 3.18 and 3.19.

3.14 CD-ROM labeling and packaging. General CD-ROM labeling, labeling on the cardboard sleeve, or jewel case liner/information booklet, as applicable, shall be as described in MIL-PRF-89049A. Items specific to VVOD are shown below.

3.14.1 CD labeling. Labeling of the VVOD CDs shall be in accordance with contract instructions.

3.14.1.1 Specific VVOD labeling items.

B.3 VVOD DATABASE AND LIBRARY VPF TABLE CONTENTS

The following sections define the default record content for each of the database and library level metadata tables that require product-specific information. The actual record content of these metadata tables in a VVOD dataset shall be tailored to accurately represent the dataset.

B.3.1 Database-level record layout. The VVOD consists of a single worldwide database. Three required VPF tables and files are implemented at the database level. These are the database header table (dht) and corresponding variable-length index (dhx) and the library attribute table (lat). The following sections describe these files and their default record content for the VVOD database.

B.3.1.1 Database header table. This table contains information about the contents of the database and security information. The format of the dht is defined in MIL-PRF-89049A, Appendix B. Table B-1 herein defines the default record contents for the dht in the VVOD database.

B.3.1.2 Library attribute table. This table contains a row for each VVOD library that describes the library's name and the minimum bounding rectangle that defines the geographic extent of that library. The format of the lat is defined in MIL-PRF-89049A, Appendix B. There is no VVOD-specific default record content for the lat.

B.3.2 Library-level record layout. Each VVOD data library shall contain the four required metadata tables and associated narrative tables and indices. These include the library header table (lht), geographic reference table (grt), coverage attribute table (cat), data quality table (dqt), a lineage narrative table (lineage.doc) and variable-length indices (lhx, grx, dqx, lineage.doc). The following sections describe these files and their default record content for VVOD data libraries.

B.3.2.1 VVOD library header table. The library header table identifies the data set, sources and security information in the data library. The format of the lht is defined in MIL-PRF-89049A, Appendix D. Table B-2 herein defines the default record contents for the lht in a VVOD data library.

B.3.2.3 Coverage attribute table. The cat defines the topology level for each coverage in a VVOD data library. The format of the cat is defined in MIL-PRF-89049A, Appendix D. Table B-4 herein defines the record content of the cat for all coverages in VVOD.

NOTES:

1. This table depicts all coverages which may be present in a VVOD library. Presence of these coverages will vary with data availability. If a library does not contain any data for a particular coverage, then the record describing the coverage will not be present.

2. The number in the level column represents the topology level of each coverage.

B.3.2.4 Data Quality Table The dqt provides information about the quality and accuracy of the data contained in the VVOD data library. The format of the dqt and the associated lineage.doc is defined in MIL-PRF-89049A, Appendix D. Table B-5 herein defines the default record contents for the dqt in a VVOD data library. No default contents are specified for the lineage.doc.

VVOD FEATURE AND ATTRIBUTE GLOSSARY

D.1 SCOPE

D.1.1 Scope. This appendix contains the feature and attribute content for VVOD data. It is a mandatory part of this specification sheet. The information contained herein is intended for compliance.

D.2 APPLICABLE DOCUMENTS

This section is not applicable to this appendix.

D.3 FEATURE CODES BY COVERAGE AND FEATURE TYPE

D.3.1 VVOD feature and attribute data dictionary organization.

a. This appendix provides two tables detailing the location and types of features and attributes found in the VVOD data dictionary. For a coverage there is a series of tables that describe the data in that coverage.

b. The first table is an index list sorted by coverage of the feature names and codes, their associated attribute names and codes, and table types.

c. The second table is a similar consolidated index sorted by feature code, of the feature names and codes, their associated attribute names and codes, their associated coverages and primitive feature table type.

d. In addition, this appendix contains the definitions of the feature codes and the attributes that are contained in VVOD.
