

MIL-C-10190D
3 April 1985
SUPERSEDING
MIL-C-10190C
7 June 1967

MILITARY SPECIFICATION

CARTRIDGE, CALIBER .50, BALL, M33

This specification is approved for use all Departments and Agencies of the Department of Defense.

1. SCOPE

1.1 Scope. This specification covers quality assurance provisions and preparation for delivery for Cartridge, Caliber .50, Ball, M33.

2. APPLICABLE DOCUMENTS

2.1 Government documents.

2.1.1 Specifications and standards. Unless otherwise specified (see 6.1), the following specifications and standards of the issue listed in that issue of the Department of Defense Index of Specifications and Standards (DoDISS) specified in the solicitation, form a part of this specification to the extent specified herein.

SPECIFICATION

MILITARY

MIL-A-48078 - Ammunition, Standard Quality Assurance Provisions, General Specification for.

STANDARDS

MILITARY

MIL-STD-105 - Sampling Procedures and Table For Inspection by Attributes.
MIL-STD-109 - Quality Assurance Terms and Definitions

FSC 1305

Beneficial comments (recommendations, additions, deletions) and any pertinent data which may be of use in improving this document should be addressed to: Commander, US Army Armament Research and Development Center, Attn: AMSMC-QA, Dover, New Jersey 07801-5001 by using the self-addressed Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document or by letter.

(Copies of specifications, standards, handbooks, drawings, and publication required by manufacturers in connection with specific acquisition functions should be obtained from the contracting activity or as directed by the contracting officer.)

2.1.3 Order of precedence. In the event of a conflict between the text of this specification and the references cited herein, the text of this specification shall take precedence.

3. REQUIREMENTS

3.1 Cartridge. The cartridge shall comply with all requirements specified on Drawing (Dwg) 7553097, all associated drawings and with all requirements specified in applicable specifications and standards.

3.2 Bullet extraction. The force required to separate the bullet from the cartridge case shall be not less than 200 pounds when tested as specified in 4.5.1.

3.3 Residual stress. The cartridge shall not split or crack when subjected to a 1% mercurous nitrate solution for 15 minutes when tested as specified in 4.5.2.

3.4 Waterproof. The cartridge shall not release more than one bubble of air when subjected to a pressure differential of 7.5 pounds per square inch (psi) for 30 seconds when tested as specified in 4.5.3.

3.5 Accuracy. The average of the mean radii of all targets of the sample cartridges, fired at 600 yards, shall not exceed 12.0 inches when tested as specified in 4.5.4.

3.6 Action time. The action time (overall primer ignition, propellant burning and bullet-barrel time) of the cartridge shall not exceed 4 milliseconds when tested as specified in 4.5.5.

3.7 Velocity. The average velocity of the sample cartridge, conditioned at 70° Fahrenheit (F), shall be 2910 feet per sec (ft/sec) plus or minus 30 ft/sec, at 78 feet from the muzzle of the weapon. The standard deviation of the velocities shall not exceed 36 ft/sec when tested as specified in 4.5.6 and 4.5.10.

3.8 Chamber pressure. The average chamber pressure of the sample cartridges, conditioned at 70°F, shall not exceed 55,000 psi when tested as specified in 4.5.7 and 4.5.10.

MIL-C-10190D

3.9 Function and casualty. The cartridge shall function without casualty. In addition, the average cyclic rate of the test weapons shall be 450 to 600 shots per minute for the Gun, Machine, Caliber .50, Browning, M2, Heavy Barrel (Turret Type) and Gun, Machine, Caliber .50, Browning M2, Heavy Barrel (Flexible) and 400 to 500 shots per minute (low rate) for the Gun, Machine, Caliber .50, M85. The test shall be performed as specified in 4.5.8.

3.10 Stripping. The jacket of the bullet or any part thereof, shall not separate from the core when tested as specified in 4.5.9.

3.11 Workmanship. The metal parts of the cartridge shall be free of cracks, splits, perforations, burrs and foreign matter. The cleaning method used shall not be injurious to any part, nor shall the parts be contaminated by any cleaning agent. All parts and assemblies shall be fabricated, loaded and assembled in a thorough and workmanlike manner. In addition, the cartridge shall comply with the standards specified in the .50 Caliber section of MIL-STD-636. Extreme care should be exercised to avoid contamination of primers or propellant by oil, grease or other foreign matter.

4. QUALITY ASSURANCE PROVISIONS

4.1 Responsibility for inspection. Unless otherwise specified in the contract or purchase order, the supplier is responsible for the performance of all inspection requirements specified herein. Except as otherwise specified, the supplier may utilize his own facilities or any commercial laboratory acceptable to the Government. The Government reserves the right to perform any of the inspections set forth in the specification where such inspections are deemed necessary to assure supplies and services conform to prescribed requirements.

4.1.1 Quality assurance terms and definitions. Reference shall be made to MIL-STD-109 to define quality assurance terms used.

4.2 Classification of inspections. The inspection requirements specified herein are classified as follows:

- a. First article inspection (see 4.3).
- b. Quality conformance inspection (see 4.4).

MIL-C-10190D

4.3 First article inspection.

4.3.1 Submission. The contractor shall submit a first article sample as designated by the Contracting Officer for evaluation in accordance with provisions of 4.3.2. The first article sample shall consist of the following items in sample quantities as indicated below:

<u>Part Description</u>	<u>Drawings</u>	<u>Quantity</u>
Ctg, Cal .50, Ball, M33 Case	7553097 5502646	1880 5/machine or tool
Core	6171991	5/machine or tool
Jacket	6174992	5/machine or tool
Bullet	7553098	5/machine or tool

4.3.2 Inspections to be performed. See MIL-A-48078 and Table II specified herein.

4.3.3 Rejection. See MIL-A-48078 and Tables I and II specified herein.

4.3.3.1 Function and casualty. The sample shall be rejected if any defect from function and casualty testing plus firing defects observed in all other firing tests exceeds the acceptance numbers specified in Table I.

TABLE I. (First article) function and casualty accept-reject criteria.

<u>DEFECT</u>	<u>ACCEPTANCE NUMBER</u>	<u>REJECTION NUMBER</u>
1. Misfire	0	1
2. Bullet remaining in bore	0	1
3. Primer defects:		
a. Perforation in firing pin	23	24
--- indent in primer cup	6	7
b. Escape of gas through primer cup other than 3a.	13	14
c. Escape of gas around primer cup for more than 50% of periphery	0	1
d. Blown primer or primer falls out of pocket on retraction of bolt.		

MIL-C-10190D

4. Case Casualties: 1/			
a. Longitudinal Split			
(1) Neck or shoulder (I or S)	26	27	
(2) Body (J)	6	7	
(3) Body (K)	0	1	
(4) To head (L)	0	1	
(5) Through head (M)	0	1	
b. Circumferential rupture			
(1) Partial, shoulder, or body (J, K or S)	1	2	
(2) Partial, head (L)	0	1	
(3) Complete	0	1	
5. Failure to extract	0		1
6. Weapon stoppage	0		1
7. Bullet stripping	0		1

1/ For location of defects indicated by letters in parentheses, see
Dwg 7643674.

NOTE:
 1/ Failure of the cartridges to comply with the applicable requirement shall result in rejection of the first article sample.
 2/ To be performed concurrently with function and casualty testing.

MIL-C-10190D

4.4 Quality conformance inspection.

4.4.1 Lot formation. In accordance with MIL-A-48078.

4.4.1.1 Lot submission. The cartridge shall be submitted in accordance with MIL-STD-105, Inspection Level II.

4.4.1.2 Component parts. Unless otherwise specified, component parts shall be homogeneous and of a size convenient to the contractor and inspected, tested and accepted by the contractor. The cartridge lot shall contain:

a. Cartridge cases from one lot interfix number from one manufacturer.

b. Bullets from one lot interfix number from one manufacturer.

c. Primers. from one lot interfix number from one manufacturer.

d. Propellant from one lot number from one manufacturer.

4.4.1.3 Lot identification. Each lot of ammunition shall be identified as to type, caliber and model, lot number in accordance with MIL-STD-1168 and the supplier's identification as assigned by the procuring activity.

4.4.2 Examination for defects.

a. Major and minor defects. Examination for major and minor defects shall be performed on a class basis in accordance with classification of defects (see 4.4.2.1), using applicable sampling plans and acceptance criteria of MIL-STD-105. All nonconforming cartridges shall be rejected.

b. Critical defects. Unless otherwise specified, one hundred percent examination shall be performed for all critical defects. If a visual critical defect is found in a sample either just prior to a firing test or after a firing test (and the defect is not due to the firing), the lot shall be rejected. The lot shall then be rescreened and resubmitted for visual inspection of critical defects. If a critical defect is found during packing, the portion of the lot that has been packed or is in the process of being packed shall be rejected. In addition, the portion of the lot remaining to be packed shall be rejected. The lot shall then be rescreened and resubmitted for visual inspection of critical defects.

4.4.3 Testing. Testing is described in 4.4.3.1. Testing shall be conducted in accordance with the methods and procedures specified in 4.5.

a. Test samples. The quantities for the various tests shall be as specified in 4.4.3.1. Only cartridges having met the visual and dimensional requirements shall be used in the ballistic tests, and shall have been selected in such a manner that the sample is representative of the entire lot. Sufficient cartridges shall be selected such that all testing (including testing of second samples where applicable) can be performed. The cartridges shall be thoroughly mixed before being divided into samples for the various tests.

b. Firing defects and associated acceptance-rejection criteria are specified in Table III.

CATEGORY	EXAMINATION OR TEST	NO. OF SAMPLE UNITS	AQL OR 100%	REQUIREMENT PARAGRAPH	PARAGRAPH REFERENCE /INSPECTION METHOD
	1/ Failure of two or more cartridges to comply with the applicable requirement shall be cause for rejection of the lot. If one cartridge fails in the first test, a second sample consisting of double the number of cartridges in the first sample shall be tested. If any failing cartridges are found in the second sample, the lot shall be rejected.				
	2/ Failure of nine or more cartridges to comply with the applicable requirement shall be cause for rejection of the lot. If more than four but less than nine cartridges fail in the first test, a second sample consisting of double the number of cartridges in the first sample shall be tested. The lot shall be rejected if in the combined first and second sample, nine or more cartridges fail to comply with the applicable requirement.				
	3/ Failure of the cartridges to comply with the applicable requirement shall be cause for rejection of the lot subject to testing of a second sample consisting of double the quantity of cartridges used in the first test. Failure of the cartridges in the second sample to comply with the applicable requirement shall be cause for rejection of the lot.				
	4/ The lot shall be rejected when function and casualty defects plus firing defects observed in all other firing tests exceed the acceptance number for the cumulative sample in Table III. If the number of defects found in the first tests exceeds the acceptance number for the first sample, but is equal to or less than the acceptance number for the cumulative sample, a second sample consisting of double the quantities specified under function and casualty shall be fired in all the service weapons in which the firing defects occurred in the first test. If the total number of defects in the combined first and second sample exceeds the acceptance number for the cumulative sample, the lot shall be rejected. If, in testing a second sample, defects other than those for which the second sample is being tested should occur to the extent that they exceed the acceptance number for the cumulative sample, the lot shall be rejected.				
NOTE: In testing a second sample, defects other than those for which the second sample is being tested should occur to the extent that they exceed the acceptance number for the cumulative sample, the lot shall be rejected.

MIL-C-10190D

NOTES:

1/ No second sample permitted. Lot shall be rejected.

2/ Primer defects:

a. Blown primer. A primer, which, when the cartridge is fired, is separated completely from the head of the cartridge case, and both the head of the case and the primer pocket are grossly distorted and deformed. The severity of this condition is such that it is readily detectable by visual examination.

b. Dropped primer. A primer which falls from the primer pocket after the cartridge is fired.

3/ For location of defects indicated by letters in parentheses, see Dwg 7643674.

4/ All stoppages attributable to the ammunition, with the exception of misfire, complete rupture or failure to extract, observed in all tests shall be included.

4.4.4 Packaging, packing and marking inspection. During or immediately prior to the packaging operation, 100 percent examination of the cartridges shall be performed to ascertain that the cartridge type conforms to the drawing. Occurrence of a high pressure test, dummy or blank cartridge shall be classed as a critical defect. Occurrence of any incorrect type other than those listed shall be classed as a major defect. All non-conforming cartridges shall be rejected. Inspection for packaging, packing and marking shall be in accordance with MIL-STD-644 as applicable to the drawing.

4.4.5 Inspection equipment. The inspection equipment required to perform the examination and test prescribed herein is described in the Paragraph Reference/Inspection method column in the tables starting with Table II, specified herein. The contractor shall submit for approval inspection equipment designs in accordance with the terms of the contract. See Section 6 of MIL-A-48078 and 6.2 herein.

4.4.6 Inspection equipment list. The examination and tests shall be made using equipment listed on LI-7553097, except as specified in 4.5.

4.5 Methods of inspection.

4.5.1 Bullet extraction. The cartridge shall be tested in an approved bullet extractor machine. The rate of travel of the test head shall be not less than three or more than six inches per minute.

MIL-C-10190D

4.5.2 Residual stress (mercurous nitrate). The test shall be conducted in accordance with SCATP 7.62.

4.5.3 Waterproof. The ammunition to be tested (not to exceed five cartridges at one time) shall be placed horizontally on a perforated tray. The tray shall be placed in a desiccator containing a sufficient quantity of freshly boiled water to maintain a head of 2 to 2-1/2 inches. The desiccator shall be evacuated to a pressure of 7-1/2 pounds per square inch (15 inches of mercury) below atmospheric pressure and held at that pressure for 30 seconds. The number of bubbles liberated from the mouth or primer of each cartridge shall be observed.

4.5.4 Accuracy. The test shall be conducted in accordance with TECP 700-700, Vol. III.

4.5.5 Action time. The test shall be conducted in accordance with SCATP-7.62.

4.5.6 Velocity. The test shall be conducted in accordance with TECP 700-700, Vol. III.

4.5.7 Chamber pressure. The test shall be conducted in accordance with TECP 700-700, Vol. III.

4.5.8 Function and casualty. In these firings, the weapons shall be at room temperature at the beginning of the test and shall be cooled between bursts. The test shall be conducted in accordance with TECP 700-700, Vol. III and as indicated below:

a. Gun, Machine, Cal .50, Browning, M2, Heavy Barrel (Turret type) - Fire in bursts of 100 cartridges.

b. Gun, Machine, Cal .50, Browning, M2, Heavy Barrel (Flexible) - Fire in bursts of 100 cartridges.

c. Gun, Machine, Cal .50, M85 - Fire in bursts of 100 cartridges.

Observation for compliance with Table I and Table III, as applicable, and the cyclic rate of each test weapon shall be made. Cyclic rate of each weapon shall be recorded.

NOTE: Ammunition links shall not be reused.

MIL-C-10190D

4.5.9 Stripping. The test shall be conducted simultaneously with the function and casualty test of the first article sample. The size of the paper screen shall be 6' x 6'. The paper screen (6' x 6') shall be placed 50 feet from the muzzle of the gun, so that the bullets will pass through the screen near its center. After each weapon is fired for function and casualty, the screen shall be examined for evidence of stripping bullet jackets. The screen shall be recovered or replaced as necessary to facilitate observation. Any evidence of stripping indicated by any irregular perforations on the paper screens, and the weapon(s) in which stripping occurred shall be reported.

4.5.10 Temperature test. The test sample shall be conditioned at 70°F, plus or minus 2 degrees F, for 2 hours minimum and fired at that temperature.

4.5.11 Defect penalty. In any ballistic test, except function and casualty, in which the occurrence of a firing defect prevents the obtaining of a reliable result for the characteristic being tested, an additional shot shall be fired. That particular test shall not be penalized, but the acceptance sample shall be penalized for such defects in accordance with Table I or III, as applicable.

5. PACKAGING

5.1 Level A (worldwide shipment). See 5.2.1.

5.2 Packing.

5.2.1 Level A (worldwide shipment). The cartridges shall be packed in accordance with Dwg. 7553346, 7553544 or 8596993.

5.3 Marking and labeling. Marking and labeling of the packed cartridges shall be in accordance with Dwg. 7553346, 7553544 or 8596993.

6. NOTES

6.1 Intended use. The cartridges covered by this specification are intended for use in .50 caliber weapons.

6.2 Ordering data.

- Title, number and date of this specification.
- Type and level of packing for the cartridges.

MIL-C-10190D

c. Provisions for the submission of Inspection Equipment Designs (DI-R-10054) (see 6.3).

d. Provisions for the submission of acceptance inspection reports containing final inspection results for each lot of ammunition presented to the Government (see 6.4).

6.3 Submission of inspection equipment designs for approval. (See MIL-A-48078). Submit inspection equipment designs as required to Commander, ARDC, ATTN: AMSMC-QAF-I(D), Dover, NJ 07801-5001.

6.4 Submission of test data. In addition to the normal distribution of records, when the cartridge is procured by the US ARDC, one (1) copy of all ballistic data and the ammunition data card for each lot shall be forwarded to: Commander, ARDC, ATTN: AMSMC-QAF-S(D), Dover, NJ 07801-5001.

6.5 Hazard notice. The cartridge described herein and some of its components are flammable and explosive and consequently present hazards in manufacture, handling, storage and shipment. The contractor should recognize these hazards and take appropriate measures to prevent fire, explosion, adverse environment, rough handling, corrosive atmosphere, and electrically induced incidents. Such measures shall include the employment of an effective safety program that addresses the inherent hazards associated with the cartridge.

6.6 Drawings. Drawings listed in Section 2 of this specification under the heading US Army Armament Research and Development Center (ARDC) may also include drawings prepared by, and identified as Edgewood Arsenal, Frankford Arsenal, Rock Island Arsenal, US Army Armament Research and Development Command (ARRADCOM) or Picatinny Arsenal drawings. Technical data originally prepared by these activities is now under the cognizance of ARDC.

6.7 Changes from previous issues. Asterisks are not used in this revision to identify changes with respect to the previous issues due to the extensiveness of the changes.
