1/ Where required, the PIN will include comparable capacitance tolerance symbol.

Inactivated styles: For new design units of MIL-PRF-39014/2 should be used as listed in table III. Although table III lists only the highest failure rate level, lower failure rate levels may be considered. For substitutability of the inactivated styles, established reliability capacitors in MIL-PRF-39014/2 of the same capacitance value, tolerance, rated voltage and temperature coefficient can be used regardless of the failure rate designation.
