

INCH POUND

MIL-C-44211B  
4 January 1995  
SUPERSEDING  
AMENDMENT 1  
5 October 1990  
MIL-C-44211A(GL)  
5 October 1989

## MILITARY SPECIFICATION

COATS, MEN'S; SERGE, POLYESTER/WOOL,  
ARMY GREEN 489, FUSIBLE, AND POLYESTER AND WOOL,  
BLUE 450 (MDW) AND BLUE 150 (MDW), FUSIBLE

This specification is approved for use by all departments and agencies of the Department of Defense.

### 1. SCOPE

1.1 Scope. This specification covers polyester/wool serge, polyester/wool tropical, and polyester/wool elastique coats.

1.2 Classification. The coats shall be of the following types, classes, and sizes as specified (see 6.2).

- Type I - Polyester and Wool Serge, Army Green 489,  
11.3 ounces
- Type II - Polyester and Wool Tropical, Blue Shade 450,  
10 ounces
- Type III - Polyester and Wool Elastique, Blue Shade 150,  
16 ounces

Beneficial comments (recommendations, additions, deletions) and any pertinent data which may be of use in improving this document should be addressed to: Defense Personnel Support Center, Clothing and Textiles Directorate, Attn: DPSC-FSSD, 2800 South 20th Street, Philadelphia, PA 19145-5099, by the Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document or by letter.

1.3 Uniform. When coats specified in this specification and trousers specified in MIL-T-43957 are procured as a uniform, the coat and trousers shall be cut from the same roll of material, the shades shall match, and the uniform shall conform to the type and class as follows (see 6.2 and 6.9):

<u>Coat</u>	<u>Trousers</u>
Type I	Class 6
Type II	Class 2
Type III	Class 2

## 2. APPLICABLE DOCUMENTS

2.1 Government documents

2.1.1 Specifications, standards, and handbooks. The following specifications, standards, and handbooks form a part of this document to the extent specified herein. Unless otherwise specified, the issues of this document shall be those listed in the issue of the Department of Defense Index of Specifications and Standards (DODISS) and supplement thereto, cited in the solicitation (see 6.2).

(Non-Government standards and other publications are normally available from the organizations that prepare or distribute the documents. These documents also may be available in or through libraries or other informational services.)

2.3 Order of precedence. In the event of a conflict between the text of this document and the references cited herein, the text of this document takes precedence. Nothing in this document, however, supersedes applicable laws and regulations unless a specific exemption has been obtained.

## 3. REQUIREMENTS

3.1 First article. When specified (see 6.2), a sample shall be subjected to the first article inspection (see 6.3) in accordance with 4.3.

## MIL-C-44211B

3.2 Basic material

3.2.1 Type I coat. The basic material shall be 11.3 ounce polyester and wool serge, Army Green 489 (matching the standard sample for Army Green 489 and basic cloth), conforming to type III, class 3 of MIL-C-823.

3.2.2 Type II coat (MDW). The basic material shall be 10 ounce polyester and wool tropical cloth, Blue Shade 450, conforming to type III, class 3 of MIL-C-21115.

3.2.3 Type III coat (MDW). The basic material shall be 16 ounce wool elastique, Blue Shade 150, conforming to type III of MIL-C-3738.

3.2.4 Lining. The material for lining the fronts, sleeves, yoke, back vent, and facings for inside breast pocket and as an option for pocket flaps and lower pocket facings shall be rayon lining, 3.7 ounces per square yard, Army Green 45 for Type I coats and Blue Shade 192 for Type II and Type III coats, conforming to class 1 of MIL-C-368. As an alternate, the lining may be a polyester twill cloth conforming to MIL-C-44121, Army Green 461 for Type I coats and Blue Shade 192 for Type II and Type III coats, to approximate shade of the basic fabric.

3.2.4.1 Binding. The binding for the coat shall be cut on the bias of the same material as the coat lining (see 3.2.4). The width of the bias binding shall be 5/8 to 7/8 inch. The binding may be placed on rolls.

3.2.5 Fusible interlinings

3.2.5.1 Small parts fusible interlining. The lapels, front facing, pocket flaps, top sleeve, undersleeve, top collar, and shoulder loops, known as "small parts" shall use a charcoal, nonwoven fusible interlining. It shall conform to either type V or VI, class 1, styles A or B; or type VIII, class 1, style A of MIL-C-44296. The material shall have a uniformly distributed powder dot, paste dot, spunfused, or sintered nylon polyamide fusible adhesive evenly applied to one side in accordance with good commercial practice; for two sided application (see Table II, operation 18.c.(4)) use type IX, class 1, styles B or C of MIL-C-44296. Any given coat shall incorporate the same small parts fusible material. As an alternate, a black or charcoal, woven, lightweight fusible interlining for small parts, conforming to type I, class 1, style A of MIL-C-44296 may be used.

3.2.5.2 Fronts fusible interlining. The fusible interlining for the coat and side body fronts shall be a black or charcoal napped woven twill material conforming to type II, class 1, style B of MIL-C-44296. The material shall have a uniformly distributed, dot-type nylon polyamide fusible adhesive evenly applied on one side in accordance with good commercial practice. Any given coat shall incorporate the same fronts fusible material.

## MIL-C-44211B

3.2.5.3 Colorfastness. All dyed finished fusible interlining materials shall show colorfastness to drycleaning as specified in MIL-C-44296. When no standard sample is available, the finished fusible materials shall show "fair" colorfastness to drycleaning.

3.2.5.4 Shrinkage. The interlining, after fusing to the basic cloth as specified in 3.2.5.5, shall not exceed 1.5 percent differential shrinkage when tested as specified in 4.4.3.1. Additionally, the interlining, after fusing to the basic cloth as specified in 3.2.5.5, shall not exceed 2.0 percent shrinkage after drycleaning when tested as required in 4.4.3.1. All drycleaned materials shall not exhibit any sign of bubbling, puckering, or delamination.

3.2.5.5 Fusing press operating procedures and conditions. A single layer of fusible interlining shall be fused to a single layer of basic material on a dry-electrically-heated, conveyor-type fusing press which has the capacity of controlling and retaining pressure, dwell time, and temperature for a minimum of 8 hours. Pair or sandwich fusing which can create differential shrinkage, stitching, and uneven bonding shall not be permitted. A steam-sourced fusing press shall not be allowed for initial fusing operations. For optimum results, the fusible material manufacturer's recommendations for fusing dwell time, pressure, and temperature based upon the fusing equipment used and basic material being fused shall be utilized. Under no circumstances shall the dry heat temperature of the fusing press exceed 315°F. Common fusing press settings shall be established in order to fuse both the small parts and fronts fusibles together. Basic preproduction and production maintenance procedures, including a fusing press information chart, shall be required to ensure proper fusing press performance relative to temperature control, evenness in pressure head or roller contact, dwell time, and cleanliness. Results of the production maintenance procedures shall be recorded on Figure 6.

3.2.6 Twill cloth. The material for the inside breast pocket, lower hanging pockets, armholes, shoulder, and pocket stays shall be polyester and cotton, or polyester and rayon matching the shade of the basic material or dyed black. It shall conform to class 1 of A-A-52106, except that the nonfibrous material content and colorfastness requirements for perspiration and crocking shall not apply.

3.2.7 Undercollar material. The material for the undercollar shall be wool flannel cloth conforming to A-A-50067, except that the colorfastness requirements for perspiration and crocking shall not apply. The color shall be Army Green 48 for the type I coat, Blue Shade 450 for type II, and Blue Shade 150 for type III.

## MIL-C-44211B

As an alternate for the type I coat, wool blend felt fabric composite, color Army Green 48, conforming to MIL-C-29137 may be used or 100 percent polyester needlepunched nonwoven material weighing between 8.0 - 10.0 oz./sq. yd., with a thickness between 0.070 - 0.095 inch at 0.6 psi, and exhibiting a minimum cross machine direction stiffness of 0.050 load lb., (when tested in accordance with FED-STD-191, TM 5202) can be used, The shade shall be Army Green 48.

3.2.8 Floating chest piece. The floating chest piece for the coat shall conform to type XVIII of MIL-C-15065.

3.2.9 Labels. Each coat shall have a combination size-identification label, a size label, an instruction label, and a cardboard instruction folder. All labels, except for the instruction folder, shall conform to DDD-L-20, and shall show colorfastness to dry cleaning.

3.2.9.1 Combination size and identification label. The combination label shall conform to type VI, class 1 and 2 combined.

3.2.9.2 Size label. The size label shall conform to type VI, class 2.

3.2.9.3 Instruction label. The instruction label shall conform to type VI, class 3. The letters for the caption shall be not less than 3/16 inch in height, and all other lettering shall be not less than 1/8 inch in height. The contents of the label for type I coats shall be as follows:

## COAT, MEN'S, ARMY GREEN

1. Dry clean only, low moisture.
2. Remove wrinkles or gloss with a steam iron or with a hot iron using a damp press cloth. Press/Iron temperature with steam shall be  $325^{\circ}\text{F} \pm 6^{\circ}\text{F}$  or wool setting with steam.
3. Roll press sleeves and lapels.
4. Utility press only.

The contents of the label for type II and III coats shall be as follows:

## COAT, MEN'S, BLUE (MDW)

1. Dry clean only, low moisture.
2. Remove wrinkles or gloss with a steam iron or with a hot iron using a damp press cloth. Press/Iron temperature with steam shall be  $325^{\circ}\text{F} \pm 6^{\circ}\text{F}$  or wool setting with steam.
3. Roll press sleeves and lapels.
4. Utility press only.

## MIL-C-44211B

3.2.9.4 Label/tag. Each item shall be individually bar-coded with a paper tag for personal clothing items. The paper tag shall be standard bleached sulfate having a basis weight of 100 pounds. The paper used for the tags shall have a smooth finish to accept thermal transfer and direct printing. The tags shall have a hole and shall be attached to each item by a fastener, clearly legible and readable by a scanner. The bar coding element shall be a 13 digit national stock number (NSN). The bar code type shall be a medium to high code density and shall be located so that it is completely visible on the item when it is folded and/or packaged as specified and so that it causes no damage to the item.

3.2.9.5 Uniform size tickets. When coat and trousers are procured as a uniform, a size ticket made of suitable commercial cardboard and measuring not less than 2-1/8 by 1-1/4 inches shall be included with both the coat and trousers. The corners may be perforated for tacking. The ticket shall be legibly printed with the following information, for example:

For type I items

UNIFORM, MEN'S, ARMY GREEN

Coat	-	38 Regular
Trousers	-	32 Regular
Army Green 489		

For type II and III items

UNIFORM, MEN'S, BLUE (MDW)

Coat	-	38 Regular
Trousers	-	32 Regular
Blue 450 (MDW)		Blue 150 (MDW)

The item description shall be printed in letters and numerals not less than 1/8 inch in height. The shade number shall be printed in letter and numerals not less than 1/16 inch in height. The nomenclature, "Coat and Trousers", together with the adjective size shall be in letters not less than 1/8 inch in height and may be abbreviated. The size shall be printed in numerals not less than 1/4 inch in height. The coat size ticket shall be tacked on the outside of the right front sleeve 2 or 3 inches from the bottom edge. The trousers size ticket shall be tacked to the outside of the waistband above the right hip pocket between the belt loops. The tickets shall be machine or hand tacked on four corners with two or three stitches to each hole.

## MIL-C-44211B

3.2.9.6 Cardboard instruction folder. The printed cardboard instruction folder, of a commercial-type, shall be attached by a string 12 inches in length, looped through a hole  $1/4$  inch in diameter, and attached to the right breast pocket flap button. The cardboard folder shall measure  $4 \pm 1/4$  inches by  $6 \pm 1/4$  inches. The text of the instruction folder shall be as shown on Figure 3. The letters for the instructions shall be not less than  $1/8$  inch in height.

3.2.10 Shoulder pads. The shoulder pads shall conform to type I, class 1 of MIL-P-15064.

3.2.11 Sleeve-head pads. The sleeve-head pads shall conform to type IV of MIL-P-15064.

3.2.12 Stay tapes. The tapes for the bridle at the breakline of the coat and for staying the armhole shall be preshrunk cotton, conforming to type I, class 1 or 2 of A-A-52071, except that the nonfibrous material content shall not apply. The tapes shall be of the following widths.

5/8 inch for bridle at breakline of coat  
1/4 inch for staying armhole

The 5/8-inch bridle tape may be dyed black, conforming to class 3, and shall show colorfastness to wet drycleaning. In the event a standard sample has not been established, the dyed tape shall show an adjective colorfastness rating of "good". The tape for staying the front edges of the coat shall be cross-cut,  $1/2$  inch wide, made from natural, or dyed black polyester and cotton, or rayon cloth conforming to class 1 of A-A-52106, except that the nonfibrous material content shall not apply. The raw edges of the tape shall be treated with a synthetic resin to prevent raveling. As an alternate, a fusible edge tape as specified in 3.2.12.1 may be used.

3.2.12.1 Fusible edge tape. The fusible edge tape shall be type I, style B, class 1, dyed black or charcoal, conforming to MIL-C-44296, except that it shall be cut in the filling (cross cut) direction at a width of  $5/8 \pm 1/32$  inch. The 5/8 inch edges shall be sewn together using a LSa-1 seam, a 304 stitch at 12 to 16 stitches per inch, and a 70/2 thread conforming to A-A-50199. All sewn edges shall be within the fusible dot area so that the adhesive will not exhibit any breaks or blank areas on either side of the joining seam.

### 3.2.13 Braid

3.2.13.1 Hanger braid. The braid for the coat hanger shall be a cotton or rayon tubular braid, flat,  $1/8$  to  $3/16$  inch wide, conforming to type IX, class 1 of MIL-B-371. The color shall be Army Green 44 for type I coats and Blue Shade 192 for types II and III.

## MIL-C-44211B

3.2.13.2 Sleeve braid (class 1 and 2 coats, Type I). The sleeve braids shall be flat, mohair or cotton braid, Army Black 194, conforming to type I, class 3, or type III, class 2, of A-A-55187 in the following widths. The colorfastness requirement to perspiration shall not apply:

Class 1 coat	-	1-1/2 inch wide braid
Class 2 coat	-	3/4 inch wide braid

3.2.13.3 Soutache braid, Type II and III coats. The sleeve ornamentation for the MDW coats shall be gold color, 1/8 inch wide, conforming to Type I, class 2 of MIL-B-13466.

3.2.13.4 Cord edge braid, Type II and III coats. The shoulder loops for the MDW coats shall be edged in gold color nylon cord edge braid, 3/32 inch wide, conforming to Type I, class 2 of MIL-B-13466.

### 3.2.14 Thread

3.2.14.1 Thread, polyester core: cotton-, or polyester-covered. The cotton-, or polyester-covered polyester core thread shall conform to A-A-50199 in the colors, sizes, and manufacturing uses as follows:

Use	Ticket	Ply
Seaming and stitching of coat	30, 50, 70	2
Overedging	70	2
Blindstitching, and machine felling (except when the use of silk or alternate nylon is indicated in Table II)	70	2
Button sewing, hand	30	2 or 3
Button sewing, machine (except automatic sew and shank type, see 3.2.14.6)	30	2 or 3
Braid stitching (class 1 and 2 coats only)	50 (black)	2 or 3
Sleeve braid soutache braiding stitching (Type II and III coats only)	50 (gold)	2
Tacking armhole and attaching sleeve-heads and pads	30 (white)	2 or 3

## MIL-C-44211B

3.2.14.2 Thread, silk. The silk thread shall conform to A-A-50196 in the types, sizes, and classes, and manufacturing uses as follows. The requirements prohibiting weighting and loading materials shall not apply for type III thread.

Use	Type	Size	Class
Machine-made buttonholes	I	B and C	-----
Hand-tailored buttonholes	II	10	1
Hand felling	III	A or C	-----
Machine-type felling	III	A	-----
Outside trim topstitching	I	O	-----

3.2.14.3 Thread, nylon. Nylon thread may be used as an alternate to silk thread, as indicated in 3.64. The nylon thread shall conform to the following types and sizes of V-T-295 (see 6.5).

Use	Type	Size	Class
Hand or machine-type felling	IV	A and C	A
Making buttonholes and bartacks	V	10	A
Machine stitching	VI	B, F, and O	A
Button sewing, machine	I, II or III	5	A

3.2.14.4 Thread, basting. The thread for basting shall be a good commercial grade, bleached or unbleached cotton thread. As an alternate, the cotton-covered polyester thread used for seaming and stitching, or the nylon thread used in hand or machine felling may be used (see 6.11).

3.2.14.5 Color. The color of the polyester-core, silk or nylon threads for type I coats shall be Army Green E, C.A. 66034, except the thread for stitching the sleeve braid shall be black AA, C.A. 66043, and the thread for tacking the armholes and attaching sleeve-head and pads shall be white. The nylon, silk, and polyester-core threads for type II and III coats shall be Blue Shade AB, C.A. 66044 or Black AA, C.A. 66043. The thread for sewing the soutache braid to the sleeve shall match the gold braid shade.

3.2.14.5.1 Colorfastness. All dyed thread shall show colorfastness to light and wet drycleaning, equal to or better than the standard sample. When no standard sample is available, the dyed thread shall show "good" colorfastness to light and wet drycleaning.

## MIL-C-44211B

3.2.14.5.2 Color, thread, topstitching. All thread used for outside trim (topstitching) either silk or nylon for type I coats, shall be separately evaluated for Army Green E, C.A. 66034 shade matching, and silk, nylon, or polyester core threads for types II and III coats shall be separately evaluated for Blue Shade AB, C.A. 66044, or Black Shade AA, C.A. 66043 shade matching.

3.2.14.6 Automatic button sewing. If an automatic machine which sews and shanks (wraps) the buttons in one operation is used, the thread shall be waxed in nylon monocord, special No. 5, having a minimum breaking strength of 16 pounds, and a minimum length per unit weight of 2150 yards per pound. The thread shall be tested for these requirements and for colorfastness (see 3.2.14.5.1) in accordance with the test methods specified in V-T-295.

3.2.15 Gimp. The gimp for reinforcing the buttonholes shall be cotton, size No. 8, conforming to type I or II of A-A-50198.

3.2.15.1 Color and colorfastness. The color of the gimp thread shall match the standard sample for Army Green 489 thread for type I coats, and Blue Shade AB, C.A. 66044 or Black, Shade AA, C.A. 66043 for types II and III coats. The dyed gimp shall show colorfastness to wet drycleaning equal to or better than the standard sample. When no standard sample is available, the dyed gimp shall show "good" colorfastness to wet drycleaning.

3.2.16 Buttons, uniform. The buttons for the front shall be 36-line, hopper back; and for the pockets and shoulder loops shall be 25-line, hopper back, conforming to type I, style 2, class A or B of MIL-B-3461.

3.2.16.1 Toggles (optional). Split or ring-type toggles, when used to fasten buttons to the breast pocket flaps and lower pocket flaps, shall conform to MIL-B-3461.

3.3 Design. The design is a four-button, single-breasted coat with notched collar and peak lapels, front and underarm darts, two-piece back with vent, two top-pleated patch pockets with flaps, two lower inside hanging pockets with flaps, and shoulder loops to button. The inside of the coat shall be 3/8 lined with yoke back, fully lined sleeves, and one inside breast pocket (see Figure 1). The type II and type III coats shall have gold cord edge braid on the shoulder loops and gold soutache braid sleeve ornamentation (see pattern for marking location of soutache braid).

## MIL-C-44211B

3.4 Patterns. Standard patterns to be used to cut working patterns will be furnished by the Government (see 6.3). The working patterns shall be identical to the Government patterns. Neither the Government patterns nor the working patterns shall be altered in any way, except that the additional notches for use during construction are allowed on the working patterns. Also, minor modifications are permitted where necessary when using automatic equipment. These modifications shall not alter the dimensional, serviceability, or appearance requirements cited in the specification. The standard patterns shall provide the following seam allowances:

1/4 inch	-	For lapel and front edge seams, points of shoulder loops, and joining pocket flaps to coat
5/16 inch	-	For armholes, darts, and shoulder seams
3/8 inch	-	For all other seams and lining seams, unless otherwise indicated
5/8 inch	-	For side and back center seams
2-1/4 inches	-	For the coat sleeve bottom turn up
1-3/4 inches	-	For the lining sleeve bottom turn up

Unless otherwise indicated in Table II, seams shall be in accordance with these seam allowances.

3.4.1 List of pattern parts. The component parts of the coat shall be cut from materials, as specified, according to the pattern parts indicated:

TABLE I. Pattern parts

Material	Pattern nomenclature	Cut parts
Basic material (see 3.2.1, 3.2.2, and 3.2.3) <u>1</u> /	Front	2
	Side body front	2
	Back	2
	Right front facing	1
	Left front facing	1
	Top collar	1
	Top sleeve	2
	Under sleeve	2
	Shoulder loop	2
	(Use shoulder loop pattern, with rounded end. Pattern will be stamped "MDW")	
	Breast patch pocket	2
	Breast pocket flap	2
	Lower pocket flap	2
	Lower pocket cord	2
	Lower pocket top and bottom pipings	2 each
	Breast pocket flap lining	2 <u>3</u> /
	Lower pocket flap lining	2
	Armhole shield (one-piece)	2

## MIL-C-44211B

TABLE I. Pattern parts (contd.)

Material	Pattern nomenclature	Cut parts
Soutache braid, gold color nylon	(Cut as required for sleeve ornamentation)	
Cord edge braid, gold color nylon	(Cut as required for shoulder loops)	
Cloth, rayon or polyester lining <u>2</u> /	Front	2
	Side body front	2
	Back yoke	1
	Top sleeve	2
	Under sleeve	2
	Lower pocket facing	2 <u>4</u> /
	Inside breast pocket piping	1
	Back vent lining	1
	Top sleeve (alternate construction)	2
	Under sleeve (alternate construction)	2
Cloth, twill, polyester and cotton, or polyester and rayon	Lower pocket	2
	Inside breast pocket	1
	Lower pocket stay	2
	Inside breast pocket stay	1
	Flap and breast pocket stay	2
Fusible interlining cloth	Right front	1
	Left front	1
	Right front facing piece	1
	Left front facing piece	1
	Shoulder loop	2
	Breast pocket	2
	Breast pocket flap	2

Material	Pattern nomenclature	Cut parts
Templates	Front shaper Left facing shaper Label shaper (working) Finished lapel shaper Undercollar shaper Top collar marker Undercollar stand shaper Shoulder loop shaper Breast patch pocket shaper Breast pocket flap marker (sew-in-line) Breast patch pocket flap shaper Breast patch pocket pleat shaper Lower pocket flap marker (sew-in-line) Lower pocket flap shaper Gorge shaper Bottom shaper Bench marker Representative production test squares (Marker for the sleeve ornamentation may be provided by the contractor)	

- 1/ Standard sample for basic material is on Roll No. 3166 for Blue Shade 450 and Roll No. 2951A for Blue Shade 150, and is applicable and available for shade, finished appearance, and colorfastness.
- 2/ Standard sample for rayon lining cloth is on Roll No. 11 for Blue Shade 450 and 150, and is applicable and available for shade, finished appearance, and colorfastness.
- 3/ Breast flap lining and lower flap lining may be cut of rayon lining in place of the basic material.
- 4/ The pocket facings may be cut of basic material in place of the rayon lining.
- 5/ The collar interlining may be cut in two pieces with center seam allowance added.
- 6/ The undercollar, when used with wool flannel and collar interlining construction, may be cut in two pieces with center seam allowance added.

## MIL-C-44211B

3.5 Construction

3.5.1 Stitches, seams, and stitching. Stitch, seam, and stitching types and stitches per inch, as specified in Table II, shall conform to FED-STD-751. When two or more seam or stitch types are given for the same part of an operation, any one of them may be used. Seam allowances shall be maintained with seams sewn so that no raw edges, run-offs, twists, pleats, puckers, or open seams shall result.

3.5.1.1 Type 301 and 306 stitching. Ends of all stitching shall be backstitched or overstitched not less than 1/4 inch, except where ends are caught in other seams or stitching. Ends of a continuous line of stitching, except label, shall be overlapped not less than 1/2 inch. The ends of the label and hand stitching shall be overlapped not less than three stitches. Thread tensions shall be maintained so that there will be no loose stitching resulting in loose bobbin or needle thread or excessively tight stitching resulting in puckering of the materials sewn. The lock shall be embedded in the materials sewn.

a. When thread breaks or bobbin run-outs occur during stitching, the stitching shall be repaired by restarting the stitching a minimum of 1/2 inch in back of the end of the stitching. 1/

b. Thread breaks or two or more consecutive skipped or run-off stitches noted during end item inspection shall be repaired by overstitching. The stitching shall start at a minimum of 1/2 inch in back of the defective area and continue a minimum of 1/2 inch beyond the defective area onto the existing stitching. Loose or excessively tight stitching shall be repaired by removing the defective stitching, without damaging the materials, and restitching in the required manner. 1/

1/ When making the above repairs, the ends of the stitching are not required to be backstitched. The loose ends shall be trimmed with scissors. Caution: Pulling or breaking the loose ends is not allowed.

3.5.1.1.1 Repairs of type 301 and 306 stitching. Repairs of type 301 and 306 stitching shall be as follows:

3.5.1.2 Type 401, 502, 503, and 504 stitching. Thread tension shall be maintained so that there will be no loose stitching. When a 401 stitch type is used, the looper (underthread) shall be on the inside. All repairs shall be in accordance with 3.6.1.1.1.a. and b., except substitute 3/4 inch for 1/2 inch where 1/2 inch appears. Repairs to stitch type 401 may be accomplished by use of stitch type 301.

## MIL-C-44211B

3.5.1.3 Type 101 and 103 stitching. The tension of 101 stitch tacking shall be adjusted and maintained so that there will be no loose stitching resulting in either loose underneath or top thread, or excessively tight stitching, resulting in a puckered outward appearance of the coats. The underneath loop shall be on the inside of the coat, unless otherwise specified in the table of operations.

3.5.1.3.1 Repairs of type 101 and 103 stitching. Repairs shall be accomplished by superimposing new tack or blindstitching in the same location after removing threads of first broken tack or blindstitching. When repairing blindstitching, superimpose stitching 1/2 inch over loose ends of broken stitching.

3.5.2 Buttonholes. The buttonholes shall be the eyelet-end, square-bar, cut-first type, reinforced with gimp. The purl of the buttonhole shall be on the outside of the coat. The ends of the gimp shall be through to the underside. The ends of the buttonhole stitching shall be tacked by hand or by machine the width of the bar section, and the ends of the buttonhole stitching caught in the gimp. The finished size of the buttonhole cut is specified in Table II. When toggles are used to attach a button to pocket flaps (see Table II, operation 41), only the eyelet of the buttonhole shall be cut and the ends of the gimp shall be caught in the bar.

3.5.3 Bartacks. Bartacks shall measure 1/4 to 3/8 inch long, and be free from thread breaks and loose stitching.

3.5.4 Outside trim stitching. All outside trim topstitching shall be done with either silk or nylon thread as specified in Table II. However, only one type of thread shall be used in the outside trim topstitching of any one coat.

3.5.5 Marking. The component parts of the coat shall be marked to ensure a uniform shade and size throughout the garment. Any method of marking may be used except:

- a. Corrosive metal fastening devices. No metal device or sew-on type markings shall be used on the rayon lining.
- b. Adhesive-type tickets which discolor the material or leave traces of paper or adhesive on the material after removal of the tickets.

NOTE: The use of ink pad numbering or machine rubber stamp, or pencil is allowed, provided that the numbering does not show on the outside of the garment, and wherever possible, is covered by the seam allowance.

## MIL-C-44211B

3.6 Manufacturing operations requirements. The coat shall be manufactured in accordance with operation requirements specified in Table II. The contractor is not required to follow the exact sequence of operations provided the finished coat is identical to that produced by following the sequence as listed in Table II. Minor modifications are permitted where necessary when using automatic equipment. These modifications shall not alter the dimensional, serviceability, or appearance requirements cited in this specification. Any additional basting or holding stitches used to facilitate manufacture is permissible provided the thread does not show on the finished coat.

3.6.1 Pressing. Pressing specified in Table II shall be done with a heated pressing iron or machine as commercially used for these coats.

3.6.2 Figures. Figures are furnished solely for guidance and information. When inconsistencies exist between the specification and the figures, the written specification shall govern.

3.6.3 Use of automated apparel equipment. Automated apparel equipment may be used to perform any of the operations specified in Table II, providing that the seam and stitch type are as specified, and the finished component conforms to the required configuration. When a Government-furnished shaper pattern is forwarded, the component shall conform to the pattern.

3.6.4 Abbreviations in Table of Operations. The abbreviations used in Table II are as follows:

Stch	-	Stitch
In	-	Inch
Ndl	-	Needle
Bob	-	Bobbin
Lpr	-	Looper
Mchne	-	Machine
Brtck	-	Bartack
Comrcl	-	Commercial

1.	<p><u>Cut basic material.</u></p> <p>a. Spread the material without tension in a suitable number of plies for the applicable fabric. The cut parts from the top and bottom ply shall match and correspond to the pattern.</p> <p>b. Lay the material in uniform lengths and widths. The plies shall not be stretched, pulled nor full, and one side of the lay shall be even.</p> <p>c. Cut coat parts in strict accordance with patterns which show directional lines, size, shape, placement of pockets and flaps, and notches for proper assembling of all parts. The use of drill holes for pocket, dart and flap locations are prohibited.</p> <p>d. Cut all parts of the garment out of one piece of material, except flap linings, armhole shields and lower pocket piping pieces which may be cut from ends. Cut piping pieces in the warp direction. When armhole shields are cut from ends, the shields shall match each other. The pocket flap linings and shoulder loops may be cut in either the warp or filling directions. Cut front darts as indicated on the pattern.</p> <p>e. The left front shall be dressed in the front shaping operation after the bottoms are shaped as defined in operation 21.d.</p>

Lower pocket opening					
Size	30-33	34-37	38-43	44-50	
Width of pocket opening	5 to 5-1/4	5-3/4 to 6	6 to 6-1/4	6-1/4 to 6-3/4	

1/ Tolerance on all measurements  $\pm 1/8$  inch. Reference Figure 8 for positions of A, B, C, D, E, and F.

3.8 End item. The end item fusible shall have "no strike through" of the adhesive after fusing. The production end item testing shall be as specified in 4.4.5. Results of the end item drycleaning test shall be recorded on Figure 7. Copies of Figures 6 and 7 shall be attached to and become part of the contractor's end item examination record.

3.9 Workmanship. The end item shall conform to the quality of product established by this specification.

## MIL-C-44211B

## 4. QUALITY ASSURANCE PROVISIONS

4.1 Responsibility for inspection. Unless otherwise specified in the contract or purchase order, the contractor is responsible for the performance of all inspection requirements (examinations and tests) as specified herein. Except as otherwise specified in the contract or purchase order, the contractor may use his own or any other facilities suitable for the performance of the inspection requirements specified herein unless disapproved by the Government. The Government reserves the right to perform any of the inspections set forth in the specification where such inspections are deemed necessary to ensure supplies and services conform to prescribed requirements.

4.1.1 Responsibility for compliance. All items shall meet all requirements of sections 3 and 5. The inspection set forth in this specification shall become a part of the contractor's overall inspection system or quality program. The absence of any inspection requirements in the specification shall not relieve the contractor of the responsibility of ensuring that all products or supplies submitted to the Government for acceptance comply with all requirements of the contract. Sampling inspection, as part of manufacturing operations, is an acceptable practice to ascertain conformance to requirements, however, this does not authorize submission of known defective material, either indicated or actual, nor does it commit the Government to accept defective material.

4.1.2 Responsibility for dimensional requirements. Unless otherwise specified in the contract or purchase order, the contractor is responsible for ensuring that all specified dimensions have been met. When dimensions cannot be examined on the end item, inspection shall be made at any point, or at all points in the manufacturing process necessary to ensure compliance with all dimensional requirements.

4.1.3 Certificates of compliance. Where certificates of compliance are submitted, the Government reserves the right to check test such items to determine the validity of the certification.

4.2 Classification of inspection. The inspection requirements specified herein are classified as follows:

- a. First article inspection (see 4.3)
- b. Quality conformance inspection (see 4.4)

4.3 First article inspection. The first article, submitted in accordance with 3.1, shall be examined for visual and dimensional defects specified in MIL-STD-1490, and for the fusing defects in 4.4.4 and 4.4.5.

## MIL-C-44211B

4.4 Quality conformance inspection. Sampling for inspection shall be performed in accordance with MIL-STD-105, unless otherwise specified.

4.4.1 Component and material inspection. In accordance with 4.1, components and materials shall be tested in accordance with all the requirements of referenced specifications, drawings, and standards unless otherwise excluded, amended, modified, or qualified in this specification or applicable procurement documents. In addition, testing shall be performed on components listed in Table V for characteristics noted including small parts and fronts fusibles fused to the outershell fabric as methods of testing specified in FED-STD-191, wherever applicable, and as listed in Table V shall be followed.

All requirements are applicable to the sample unit. Unless otherwise specified, the lot average will apply when more than one determination is made per sample unit. All test reports including Figures 6 and 7 shall contain the individual values used in expressing the final result. The component lot shall be unacceptable if one or more sample units fail to meet any of the test requirements specified. The lot size shall be expressed in linear yards and the sample unit shall be 18-linear inches full width. The sample size shall be in accordance with the following:

<u>Lot size</u>	<u>Sample size (sample units)</u>
800 or less	2
801 to 22,000	3
22,001	5

TABLE V. Component tests - fusible materials

Component	Characteristic	Requirement	Test method
Cloth, fusible, all parts	Color	3.2.5.1 and 3.2.5.2	Visual <u>1/</u>
	Adhesive type	3.2.5.1 and 3.2.5.2	<u>1/</u>
	Evenness of adhesive	3.2.5.1 and 3.2.5.2	<u>1/</u> <u>2/</u>
	Colorfastness to drycleaning	3.2.5.4	5621

1/ A certificate of compliance will be accepted for this requirement.

2/ A 12-inch head end per 100 yards of fusible material shall be viewed under a black light for unevenness of adhesive, missing dot, or extreme heavy coating. Any of these conditions observed shall cause rejection of the 100 yard sample.

## MIL-C-44211B

4.4.2 Daily preproduction testing. The tests listed in Table VI shall be performed each day prior to the start of production.

TABLE VI. Daily preproduction tests

Characteristic	Requirement	Test procedure
Fusing press settings	3.3.5.5	4.4.2.1
Actual fusing temperature	3.3.5.5	4.4.2.2

4.4.2.1 Fusing press settings. Before production begins each day, visually check all fusing machine settings for temperature, pressure and conveyor speed dwell time for conformance with the manufacturer's recommendations. Nonconforming settings shall be adjusted accordingly. Actual settings will be recorded in the first column of Figure 6.

4.4.2.2 Actual fusing temperature. Two swatches of outershell material, 12 inches in the warp direction and 11 inches in the filling direction, shall be cut from the outershell material to be used in the first 2 hours of the day's production. At the same time, one swatch each of the small parts and fronts fusible material, 12 inches in the warp (machine) direction and 11 inches in the filling (cross-machine) direction, shall be cut from material to be used in the first 2 hours of the day's production. All test swatches shall be cut in three equal parts of approximately 3.6 inches by 12 inches. The fusible test swatches may be cut slightly smaller in size to avoid conveyor belt contamination.

A temperature strip placed face down shall be sandwiched between one specimen of the outershell material placed face down and a specimen of fronts fusible material placed on top with the adhesive side down. The temperature strip shall be placed slightly within the fusible starter strip. All small parts and fronts fusing tests shall have an approximate 1 inch by full width starter strip or non-fused area incorporated into the top portion of any given bond strength samples. This can be accomplished by placing a thin non-adhesive material between the fusible interlining and outershell before fusing, or by folding the fusible onto itself. This sample shall be placed in the center of the fusing press conveyor with the outershell material down.

Two additional samples shall be prepared as described above using the fronts fusible material and placing them on the left and right sides of the conveyor belt with the outershell material face down. This process shall be repeated for the small parts fusible material but without using the temperature strips. If necessary, lanes may be designated on the samples.

## MIL-C-44211B

After the fusing press is fully warmed up, run all the samples through the press. When all the samples are cool to the touch after running through the fusing press, take the temperature strip specimens, determine the average of the three readings, and record the results in column 2 of Figure 6. Each individual temperature reading shall be retained in an organized, self-developed worksheet format. If the average temperature falls outside of the fusible manufacturer's recommended range, or if there is a variance in excess of 10°F or 6°C between lanes, determine the cause, correct the problem, and repeat the testing process. Actual temperature and time shall be recorded in Figure 6. (See 6.6 for suggested temperature strip sources.)

**4.4.3 In-process inspection.** Inspection of subassemblies shall be made to ascertain that construction details which cannot be examined in the finished product are in accordance with specified requirements. The Government reserves the right to exclude from consideration for acceptance, any material or service for which in-process inspection has indicated nonconformance.

Examination shall be made of the following operations to establish conformance to specified requirements. Whenever nonconformance is noted, corrections shall be made to the areas affected, the lot in process, and to the operation. Parts which cannot be corrected shall be removed from production.

a. Visual and dimensional examination of the working patterns to determine that they conform to the Government patterns in all respects (see 3.4).

b. Visual and dimensional examination of the cut parts to determine that they are properly cut with respect to size, material directional requirements (warp and filling); that location marks and notches on the parts are located correctly; and that parts containing material defects and damages have been removed (see 3.6.5 and Table II, Operations 1 through 4).

c. Visual examination of cut parts during assembly of the coat to determine proper shade matching (see 3.6.5 and Table II, Operation 5).

d. Visual examination of the fused cut parts to assure conformance to the specified positioning requirements of Operation 6 in Table II, and that there is no bubbling, strike back, or strike through. Additionally, all cut parts shall be examined for any resin transference.

e. Visual examination of collar gorge seam to determine if seam is tacked open and the bridle tape is caught in the tacking (see Table II, Operation 34.d.).

## MIL-C-44211B

f. Visual examination of sleeves (prior to basting lining to armhole, side seams, and bottom of coat) to determine that sleeves set uniformly with fullness at armhole distributed without pleats or puckers (see Table II, Operation 35). 1/

g. Visual examination of taped front and back armholes to determine that the armhole tape is stitched correctly without any indication of a stretched back and front armhole (see Table II, Operations 20.c. and 20.d.). 1/

h. Visual examination to determine that the breast pocket conforms to the breast pocket shaper, and the breast pocket flaps and the lower pocket flaps conform to their respective pocket flap shapers (sew in line). 2/

1/ For this examination, the contractor shall establish an inspection station. Periodic examination shall be made during each work shift to determine that the requirements are being met.

2/ This examination shall be performed prior to stitching the flaps to the coat front.

4.4.3.1 Examination of coat fronts and facings. The right and left coat fronts after stitching side fronts, darts, making lower pockets, attaching breast pockets, pocket flaps, coat front fusible interlinings and all other fused parts, bridle tape, and facing shall be examined for the defects listed below.

<u>Examine</u>	<u>Defect</u>
Front darts and side body fronts	One or more omitted One or more not as specified One or more not pressed as specified
Front fusible interlinings, facing fusible interlinings, and all other fused component cut parts	Not attached or positioned as specified Not fused Omitted
Front floating chest piece	Not attached or positioned as specified Omitted Not assembled in accordance to specified requirements
Breast pockets	One or more out of alignment or not parallel with front edge
Breast and lower pocket flaps	One or more out of alignment or not parallel with front edge

## MIL-C-44211B

Bridle tape	Omitted Not held taut causing lapel breakline to be stretched Misplaced at gorge: - more than 3/8 inch behind lapel breakline - onto or extending beyond breakline on lapel side Misplaced at bottom lapel breakline: - more than 5/8 inch behind breakline - onto or extending beyond breakline on lapel side - not within 1 to 1-1/2 inches from bottom of lapel Tape and interlining not stamp marked for fullness of bridle.
-------------	---

4.4.3.2 Examination of fronts and backs after joining. The fronts and backs after joining shall be examined for the defects listed below.

<u>Examine</u>	<u>Defect</u>
Fronts and lapels	One or more not shaped in accordance with shaper patterns
Left front	Not dressed from bottom notch to base of lapel

4.4.4 Point count inspection. Sampling and inspection provisions for end items, dimensional examination, and packaging inspection shall be performed in accordance with MIL-STD-1490 except that for end item examination, the following additional defects and point values shall apply:

	<u>Point value</u>
1. Delamination	
a. Partial or complete delamination on any fused component	*
b. Bubbling on any fused component	*
2. Any strike through or bleed through	*
3. Any resin transfer to coat	
a. On any fused component	*
b. Non-fused component	3

4.4.5 End item testing. One coat shall be randomly selected for end item testing for each 3000 coats or any portion of 3000 coats in the end item lot. Each coat selected shall be initially evaluated visually for any defects in the fusible category of MIL-STD-1490.

## MIL-C-44211B

4.4.6 Packaging examination. The fully packaged end items shall be examined for the defects listed below.

<u>Examine</u>	<u>Defect</u>
Finished dimensions	Length, width, or height exceeds specified maximum requirements
Palletization	Pallet pattern not as specified Load not bonded with required straps as specified
Weight	Exceeds maximum load limits
Marking	Omitted, incorrect, illegible, of improper size, location, sequence, or method of application

## 5. PACKAGING

5.1 Preservation. Preservation shall be level A or Commercial, as specified (see 6.2).

### 5.1.1 Level A

#### 5.1.1.1 Coats (classes 1 and 2)

5.1.1.1.1 Folding. Each coat shall be laid back down and a paperboard insert conforming to Figure 4 placed in the coat so as to fit snugly into the collar and shoulder area. The buttonhole front shall overlap the button front. The sleeves shall be positioned full length so that the sleeve ends rest over the pockets. The coat shall then be folded in half by bringing the bottom up even with the top edge of the collar so that the folded coat measures not more than 21 by 16 inches.

5.1.1.1.2 Arrangement. Five folded coats of one type, class, and size only, stacked one on another with collars alternated, shall be placed in an intermediate fiberboard box as specified.

5.1.1.1.3 Intermediate packing. The intermediate fiberboard box shall conform to style FTC, type CF, variety SW, class domestic, grade 200 of PPP-B-636. Inside dimensions of the box shall be 21 inches in length, 16 inches in width, and 6 inches in depth. The box closure shall be secured with 3 inch (minimum) width gummed paper tape conforming to A-A-1492. The tape shall be applied at the center of the length opening and extend along the bottom and up the sides at least 3 inches.

5.1.1.2 Coat (class 3). Coats shall be folded as specified in 5.1.1.1.1.

## MIL-C-44211B

5.1.1.3 Uniforms (classes 1, 2, and 3). A uniform shall consist of a matching coat and trousers, and, when procured as such, shall be folded together as follows:

5.1.1.3.1 Uniform folding. The coat shall be folded as specified in 5.1.1.1.1. Each pair of trousers shall be folded so that the length dimension is approximately 24-1/2 inches. The folded coat shall be placed between the fold of the trousers. The folded uniform shall measure not more than 24-1/2 by 16 inches.

5.1.1.4 Uniform arrangement (classes 1 and 2). Five folded uniforms of one type, class, and size only, stacked on one another, shall be placed in an intermediate fiberboard box as specified.

5.1.1.4.1 Intermediate packing. The intermediate fiberboard box shall conform to style FTC, type CF, variety SW, class domestic, grade 200 of PPP-B-636. Inside dimensions of the box shall be 25 inches in length, 16 inches in width, and 9 inches in depth. The box closure shall be secured with 3 inch (minimum) width gummed paper tape conforming to A-A-1492. The tape shall be applied at the center of the length opening and extend along the bottom and up the sides at least 3 inches.

5.1.2 Commercial. Coats or uniforms of one type, class, and size only, shall be preserved in accordance with ASTM D 3951.

5.2 Packing. Packing shall be level A, B, or Commercial as specified (see 6.2).

5.2.1 Level A packing

5.2.1.1 Coats (classes 1 and 2). Fifteen coats of one class and size only, preserved as specified in 5.1, shall be packed in a fiberboard shipping container conforming to style RSC, grade V2s of PPP-B-636. Level A intermediate packs shall be packed flat, three in depth within a shipping container. Inside dimensions of each shipping container shall approximate 23 inches in length, 18 inches in width, and 19 inches in depth. Approximate dimensions are furnished as a guide only. Each shipping container shall be closed in accordance with method III, waterproofed in accordance with method V, and reinforced as specified in the appendix of PPP-B-636, except that the inspection shall be in accordance with 4.4.4. Shipping containers shall be arranged in unit loads in accordance with MIL-L-35078 for the type and class of load specified (see 6.2). Strapping shall be limited to nonmetallic strapping, except for type II, class F loads.

## MIL-C-44211B

5.2.1.2 Coats (class 3). Fifteen coats of one size only, preserved as specified in 5.1.1.2, shall be packed in a fiberboard shipping container conforming to style RSC-L, grade V2s of PPP-B-636. The inside of each shipping container shall be fitted with a box liner conforming to type CF, class weather-resistant, variety DW, grade V15c of PPP-B-636. Inside dimensions of each shipping container shall approximate 22 inches in length, 17 inches in width, and 13 inches in depth. Approximate dimensions are furnished as a guide only. Level A unit packs shall be packed flat, fifteen in depth and alternated collar to bottom. Prior to packing, the shipping container shall be provided with an interior case liner bag, made from polyethylene film having a nominal thickness of 0.003 inches. The open top of the case liner bag shall be of sufficient length to completely cover the stack of coats when closed. The liner shall be closed by folding the top down onto the stack and securing it with pressure-sensitive tape or by means of a mechanical tie prior to closure of the container.

Each shipping container shall be closed in accordance with method III, waterproofed in accordance with method V, and reinforced as specified in the appendix of PPP-B-636, except that the inspection shall be in accordance with 4.4.4. Shipping containers shall be arranged in unit loads in accordance with MIL-L-35078 for the type and class of load specified (see 6.2). Strapping shall be limited to nonmetallic strapping, except for type II, class F loads.

5.2.1.3 Uniforms (classes 1 and 2). Ten uniforms of one class and size only, preserved as specified in 5.1, shall be packed in a fiberboard shipping container conforming to style RSC, grade V2s of PPP-B-636. Level A intermediate packs shall be packed flat, two in depth within a shipping container. Inside dimensions of each shipping container shall approximate 27 inches in length, 18 inches in width, and 19 inches in depth. Approximate dimensions are furnished as a guide only.

Each shipping container shall be closed in accordance with method III, waterproofed in accordance with method V, and reinforced as specified in the appendix of PPP-B-636, except that the inspection shall be in accordance with 4.4.4. Shipping containers shall be arranged in unit loads in accordance with MIL-L-35078 for the type and class of load specified (see 6.2). Strapping shall be limited to nonmetallic strapping, except for type II, class F loads.

5.2.1.4 Uniforms (class 3). Ten uniforms of one size only, preserved as specified in 5.1.1.4, shall be packed in a fiberboard shipping container conforming to style RSC-L, grade V2s of PPP-B-636. The inside of each shipping container shall be fitted with a box liner conforming to type CF, class weather-resistant, variety DW, grade V15c of PPP-B-636. Inside dimensions of each shipping container shall approximate 25-1/2 inches in length, 17 inches in width, and 13 inches in depth. Approximate dimensions are furnished as a guide only. Level A unit packs shall be packed flat, ten in depth.

## MIL-C-44211B

Prior to packing, the shipping container shall be provided with an interior case liner bag, made from polyethylene film having a nominal thickness of 0.003 inches. The open top of the case liner bag shall be of sufficient length to completely cover the stack of uniforms when closed. The liner shall be closed by folding the top down onto the stack and securing it with pressure-sensitive tape or by means of a mechanical tie prior to closure of the container. Each shipping container shall be closed in accordance with method III, waterproofed in accordance with method V, and reinforced as specified in the appendix of PPP-B-636, except that the inspection shall be in accordance with 4.4.4. Shipping containers shall be arranged in unit loads in accordance with MIL-L-35078 for the type and class of load specified (see 6.2). Strapping shall be limited to nonmetallic strapping, except for type II, class F loads.

### 5.2.2 Level B packing

5.2.2.1 Coats (classes 1 and 2). Fifteen coats of one class and size only, preserved as specified in 5.1, shall be packed in a fiberboard shipping container conforming to style RSC, type CF, (variety SW) or type SF, class domestic, grade 275 of PPP-B-636. Level A intermediate packs shall be packed flat, three in depth within a shipping container. Inside dimensions of each shipping container shall approximate 23 inches in length, 18 inches in width, and 19 inches in depth. Approximate dimensions are furnished as a guide only. Each shipping container shall be closed in accordance with method II, as specified in the appendix of PPP-B-636, except that the inspection shall be in accordance with 4.4.4.

5.2.2.2 Coats (class 3). Fifteen coats of one size only, preserved as specified in 5.1.1.2, shall be packed in a fiberboard shipping container conforming to style RSC-L, type CF (variety SW) or SF, class domestic, grade 275 of PPP-B-636. The inside of each shipping container shall be fitted with a box liner conforming to type CF, class domestic, variety DW, grade 275 of PPP-B-636. Inside dimensions of each shipping container shall approximate 22 inches in length, 17 inches in width, and 13 inches in depth. Approximate dimensions are furnished as a guide only. Level A unit packs shall be packed flat, fifteen in depth and alternated collar to bottom. Prior to packing, the shipping container shall be provided with an interior case liner bag, made from polyethylene film having a nominal thickness of 0.003 inches. The open top of the case liner bag shall be of sufficient length to completely cover the stack of coats when closed. The liner shall be closed by folding the top down onto the stack and securing it with pressure-sensitive tape or by means of a mechanical tie prior to closure of the container. Each shipping container shall be closed in accordance with method II, as specified in the appendix of PPP-B-636, except that the inspection shall be in accordance with 4.4.4.

## MIL-C-44211B

5.2.2.3 Uniforms (classes 1 and 2). Ten uniforms of one class and size only, preserved as specified in 5.1, shall be packed in a fiberboard shipping container conforming to style RSC, type CF, (variety SW) or SF, class domestic, grade 275 of PPP-B-636. Level A intermediate packs shall be packed flat, two in depth within a shipping container. Inside dimensions of each shipping container shall approximate 27 inches in length, 18 inches in width, and 19 inches in depth. Approximate dimensions are furnished as a guide only. Each shipping container shall be closed in accordance with method II, as specified in the appendix of PPP-B-636, except that the inspection shall be in accordance with 4.4.4.

5.2.2.4 Uniforms (class 3). Ten uniforms of one size only, reserved as specified in 5.1, shall be packed in a fiberboard shipping container conforming to style RSC-L, type CF (variety SW) or SF, class domestic, variety DW, grade 275 of PPP-B-636. The inside of each shipping container shall be fitted with a box liner conforming to type CF, class domestic, variety DW, grade 275 of PPP-B-636. Inside dimensions of each shipping container shall approximate 25-1/2 inches in length, 17 inches in width, and 13 inches in depth. Approximate dimensions are furnished as a guide only. Level A unit packs shall be packed flat, ten in depth. Prior to packing, the shipping container shall be provided with an interior case liner bag, made from polyethylene film having a nominal thickness of 0.003 inches. The open top of the case liner shall be closed by folding the top down onto the stack and securing it with pressure-sensitive tape or by means of a mechanical tie prior to closure of the container. Each shipping container shall be closed in accordance with method II, waterproofed in accordance with method V, and reinforced as specified in the appendix of PPP-B-636, except that the inspection shall be in accordance with 4.4.4.

5.2.2.5 Weather-resistant fiberboard shipping container. When specified (see 6.2), the shipping container shall be a grade V3c, V3s, or V4s fiberboard box fabricated in accordance with PPP-B-636, and closed in accordance with method III as specified in the appendix of PPP-B-636, except that the inspection shall be in accordance with 4.4.4.

5.2.2.6 Hanger packs. When specified (see 6.2), 12 coats of one type, class and size shall each be placed on a 16-inch hanger for sizes up to and including size 36 and a 17-inch hanger for size 37 and larger and packed in a type I container (hanger pack) in accordance with MIL-C-44192. The loaded containers shall be palletized and marked in accordance with MIL-C-44192.

5.2.3 Commercial. Coats or uniforms of one type, class, and size only, preserved as specified in 5.1, shall be packed in accordance with ASTM D 3951.

## MIL-C-44211B

5.3 Palletization. When specified (see 6.2) coats and uniforms, packed as specified in 5.2.2 or 5.2.3, shall be palletized on a 4-way entry pallet in accordance with load type 1a of MIL-STD-147. Pallet type shall be I (4-way entry), type IV, or type V in accordance with MIL-STD-147. Pallets shall be fabricated from wood groups I, II, III, or IV, of MIL-STD-731. Each prepared load shall be bonded with primary and secondary straps in accordance with bonding means C and D or film bonding means F or G. Pallet pattern for coat and uniform, classes 1 and 2 shall be number 6 and for class 3 shall be pallet pattern number 3 in accordance with the appendix of MIL-STD-147.

5.4 Marking. In addition to any special marking required by the contract or purchase order, intermediate packs, shipping containers and palletized unit loads shall be marked in accordance with MIL-STD-129 or ASTM D 3951, as applicable.

## 6. NOTES

(This section contains information of a general or explanatory nature that may be helpful, but is not mandatory.)

6.1 Intended use. The coats are intended for wear as part of the Department of the Army (Type I) and the Military District of Washington (Types II and III).

6.2 Acquisition requirements. Acquisition documents should specify the following:

- a. Title, number and date of this specification.
- b. Types, classes and sizes required (see 1.2).
- c. Whether coat and trousers are procured as a uniform (see 1.3, 3.3.9.4, and 6.9).
- d. Issue of DODISS to be cited in the solicitation and, if required, the specific issue of individual documents referenced (see 2.1 and 2.2).
- e. When first article inspection is required (see 3.1, 4.3, and 6.3), the item will be tested and should be a first article sample. The contracting officer should include specific instructions in acquisition documents regarding arrangement for examinations, quantity, and testing and approval.
- f. Selection of applicable levels of preservation and packing (see 5.1 and 5.2).
- g. Type and class of unit load required (see 5.2.1.1, 5.2.1.2, 5.2.1.3, and 5.2.1.4).
- h. When weather-resistant grade fiberboard shipping containers are required for level B packing (see 5.2.2.5).
- i. When hanger pack is required (see 5.5.2.6).
- j. When palletization is required (see 5.3).

MIL-C-44211B

6.3 First article. When a first article is required, it shall be inspected and approved under the appropriate provisions of FAR 52.20. The first article should be a preproduction sample. The contracting officer should specify the appropriate type of first article and the number of units to be furnished. The contracting officer should include specific instructions in all acquisition documents regarding arrangements for selection, inspection, and approval of the first article.

6.4 Samples. For access to samples, address the contracting activity issuing the invitation for bids.

6.5 Nylon thread. The particular nylon thread chosen should perform satisfactorily in each of the operations for which it is allowed under mass production conditions. Thread guide and tension devices should be carefully examined, and rough or worn machine components should be replaced. High needle temperature should be avoided to prevent melting of the thread.

6.6 Temperature indicators. Suggested sources for temperature indicators are as follows:

Paper Thermometer Company (603) 547-2034

6.7 Release agent. Suggested source for release agent is as follows:

Apparel Machine & Supply Co. (EZ off Agent) (215) 634-2626

6.8 Bonding strength dispute procedure. In case of dispute, the average of the first 3 inches of the five highest bonding strength peaks from a chart recording on a CRE Tensile Tester, running at 12 inches per minute shall determine the bonding strength. If splitting is observed, then just the highest peak shall be regarded as the bonding strength.

6.9 Uniform assembly. When coats and trousers are provided as a uniform, the coats and trousers should be assembled as follows:

<u>X-Short</u>		<u>Short</u>		<u>Regular</u>		<u>Long</u>		<u>X-Long</u>

				52	47				

6.10 Alternate construction

a. When the alternate construction to fell the armhole lining by machine is used, it consists of leaving an opening between notches of the forearm sleeve lining seam and stitching the lining to the armhole on the inside from front sleeve notch of sleeve to backarm seam across undersleeve (301 stitch).

Utilizing the forearm sleeve opening, stitch the top sleeve lining to the armhole on inside by felling machine from front sleeve notch to backarm seam across the crown of top sleeve lining. Close the previous left opened forearm seam.

b. Use of AMF Automatic 84-4 EBS Button Machine, using fully wrapped shank with show (tack) stitch is permissible.

6.11 Basting recommendations. In order to assure good basting without quilling effect (protrusion of extraneous fibers through basting needle holes) the following practices are recommended:

a. Utilize either 70/2 smooth finish cotton/polyester wrap or size A nylon thread. Avoid using threads with coarse, hairy exterior structure.

b. Utilize finest size sewing needle possible (sizes 12 or 14) with ballpoint. Larger sized needles will provide larger holes and better chance for fibrous material to enter.

c. Increase quality control checks on needle changes during production. Dull or burred needle tips will push fibrous material to outershell exterior.

d. Reduce basting sewing tensions and amount of pull on the material being sewn wherever possible.
