SUPERSEDING  
MIL-O-2414G(NU)  
15 August 1984

MILITARY SPECIFICATION

OVERCOAT, MAN'S, ENLISTED

This specification is approved for use by the Navy Clothing and Textile Research Facility, Department of the Navy, and is available for use by all Departments and Agencies of the Department of Defense.

1. SCOPE

1.1 Scope. This specification covers the requirements for the enlisted man's double breasted service blue overcoat (pea coat).

1.2 Classification. The overcoat shall be of one type only and in the following sizes and lengths (see 6.2):

Sizes - 30, 32, 34, 36, 38, 40, 42, 44, 46, 48, 50, and 52

Lengths - short, regular, long, and extra-long

---

Beneficial comments (recommendations, additions, deletions) and any pertinent data which may be of use in improving this document should be addressed to: Officer in Charge, Navy Clothing and Textile Research Facility, 21 Strathmore Road, Natick, MA 01760-2490 by using the self-addressed Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document or by letter.

THE COLOR ASSOCIATION OF THE UNITED STATES

Department of Defense Standard Shades for Buttons

Department of Defense Standard Shades for Sewing Threads

(Application for copies of color cards should be addressed to the Color Association of the U.S. Inc., 343 Lexington Avenue, New York, NY 10016).

TECHNICAL MANUAL OF THE AMERICAN ASSOCIATION OF TEXTILE CHEMISTS AND COLORISTS

Method No. 8 Colorfastness to Crocking: AATCC Crockmeter Method

(Application for copies should be addressed to the AATCC National Headquarters, P.O. Box 12215, Research Triangle Park, NC 27709-9989).

2.3 Order of precedence. In the event of a conflict between the text of this specification and the references cited herein, the text of this specification shall take precedence. Nothing in this specification, however, shall supersede applicable laws and regulations unless a specific exemption has been obtained.

3. REQUIREMENTS

3.1 Guide sample. Samples, when furnished, are solely for guidance and information to the contractor (see 6.3). Variations from this specification may appear in the sample in which case this specification shall govern.

3.2 First article. When specified, the contractor shall furnish sample unit(s) for first article inspection and approval (see 4.3 and 6.2).

3.3 Materials.

3.3.1 Basic material. The basic material shall be 22 ounce wool melton conforming to type II, class 4 of MIL-C-16290 shade Blue 3346.

3.3.2 Linings.

3.3.2.1 Lining, fleece. The knitted fleece material for lining the body shall conform to type III of MIL-C-17155 and shall be dyed to match Black 3234.

3.3.2.2 Lining, sleeves and yoke. The napped-back satin material for lining the sleeves and yoke shall conform to type II of MIL-C-43525 and shall be dyed to match Black 3202.

## MIL-O-2414H(NU)

3.3.3 Nylon binding. The binding for the back edge of facings, bottom raw edge and vent shall be nylon taffeta cloth conforming to type IV of MIL-C-21852. The color shall be black. The nylon shall be cut on a 45 (+5) degree angle in strips of 7/8 to 1 inch width. The ends of the strips shall be joined together by stitch type 301 and the seam type SSa-1 with 10-12 stitches per inch.

3.3.4 Pocketing.

3.3.4.1 Inside pockets. The material for the inside pocket and the cash pocket shall be polyester, polyester/cotton, or polyester/rayon twill conforming to class 1 of MIL-C-43718. The shade shall be natural or black. When a black shade is used, the colorfastness requirements for perspiration and crocking shall not apply.

3.3.4.2 Front pockets. The material for the front pockets shall be cotton corduroy conforming to type I, class 1 of CCC-C-441.

3.3.4.2.1 As an alternate, the material for the front pockets shall be a soft filled cotton flannel having a smooth suede finish on one side, in natural or gray shade and shall conform to the physical requirements shown in Table I when tested as specified in Table III.

TABLE I. Physical Requirements

Characteristics	Minimum
Weight (oz./sq. yd.)	6.0
Yarns per inch:	
Warp	44
Filling	40
Breaking strength (pounds):	
Warp	60
Filling	35

The use of sulphur dyes and dyes containing elementary sulphur or sulphur compounds capable of oxidation to sulphuric acid is prohibited. The dyed material shall show a minimum of good fastness to wet-dry cleaning and shall show an AATCC Rating for crocking not lower than 3 when tested as specified in Table III.

3.3.5 Interlining. The material for interlining the collar shall be cotton warp, and spun hair-wool filling conforming to type I, class 2 of MIL-C-297. The color shall be black, grey, or natural.

3.3.6 Wigan. The material for interlining the sleeve bottoms shall be cotton wigan, natural color, conforming to type I of MIL-C-16375.

\* 3.3.7 Coat front. The coat front shall be manufactured in accordance with type XIX of MIL-C-15065.

## MIL-O-2414H(NU)

3.3.8 Shoulder and sleeve-head pads. The shoulder pads shall conform to type I, class 1 and the sleeve-head pads shall conform to type IV of MIL-P-15064.

3.3.9 Threads.

3.3.9.1 Cotton or covered polyester thread. The thread for seaming and stitching the overcoat shall be dyed Black AA Cable No. 66043 of DOD Standard Shades for Sewing Threads. Colorfastness requirements shall be in accordance with 3.3.9.3.3, and shall conform to V-T-276 or MIL-T-43548 (2 or 3 ply, except the use of the polyester-covered, polyester core thread is not allowed) when applicable, in the following types and sizes:

Use	Type 1/	Ticket No./	
		Ply 1/	Ticket No. 2/
Seaming and stitching	IC2	0/3	50
401 looper; 304 stitching	IC2	0/3	70
Tacking armholes and attaching sleeve-head pads	IA1 or IA2	30/3	30
Buttonholes and bartacks	IC2	A or B/3	30
Button sewing:			
Hand	IB3	12 or 16/4	30
Machine	IA3 or IB3	20/4	30

1/ Applies to V-T-276.

2/ Applies to MIL-T-43548.

3.3.9.2 Basting thread. Thread for basting and tacking may be bleached or unbleached and shall be of a good commercial grade cotton. A monofilament synthetic thread may be used for only those basting operations where the thread is required to be removed provided the garment is subsequently given a treatment by a cleaning agent in which the synthetic thread is soluble. When this thread is used, any residue remaining on the garment after the dry cleaning process shall be brushed or removed.

3.3.9.3 Felling thread.

3.3.9.3.1 Polyester thread. For machine felling and blind felling, polyester thread conforming to type I, size A/3 or AA/2 of V-T-285 or a monofilament nylon thread of comparable type and size shall be used. The color of the polyester thread shall be black.

3.3.9.3.2 Nylon thread. For hand felling, nylon thread conforming to type IV, size A/2 or C/2 of V-T-295 shall be used. The color shall be black.

3.3.9.3.3 Colorfastness. The dyed thread shall show colorfastness to wet-dry cleaning and light equal to or better than the standard sample when tested as specified in V-T-276, V-T-285, V-T-295, or MIL-T-43548. As a limit of acceptability, or when no standard is available, the dyed thread shall show a minimum of "good" colorfastness to wet-dry cleaning and light when tested as specified in V-T-276, V-T-285, V-T-295, or MIL-T-43548.

## MIL-O-2414H(NU)

3.3.9.4 Gimp. The gimp for reinforcing the buttonholes shall be thread, cotton, gimp, buttonhole conforming to type I or II, size No. 8 of V-T-280. The gimp shall be dyed black.

3.3.9.4.1 Colorfastness. The dyed thread shall show colorfastness to wet-dry cleaning equal to or better than the standard sample when tested as specified in V-T-280. As a limit of acceptability, or when no standard is available, the dyed thread shall show a minimum of "good" colorfastness to wet-dry cleaning when tested as specified in V-T-280.

3.3.10 Tapes.

3.3.10.1 Woven tape. The tape shall be cotton, preshrunk, conforming to type I, class 1 or class 2 of DDD-T-86. The widths shall be as follows:

1/2 inch for staying lapels, fronts and bottom edges  
5/8 inch for staying bridle at breakline of lapel  
1/4 inch for staying back armhole, lower part of front  
armhole, and fold line of left vent

3.3.10.2 Cross-cut tape. The tape for staying the front shoulder, neck gorge, back neckline and upperpart of front armhole shall conform to class 1 of MIL-C-43718. The tape shall be cut across the width of the cloth in strips 1/2 (+1/16) inch wide and shall be dyed or undyed. The raw edges of the tape shall be treated with a synthetic resin to prevent raveling when tested as specified in 4.4.1.

3.3.10.3 Tape, fusible. The tape for joining the fronts and facings shall be woven or non-woven with a thermoplastic polyamid resin applied to the tape. The tape shall be natural color and shall be 5/8 inch in width (see 4.4.1).

3.3.11 Buttons.

3.3.11.1 Plastic anchor design buttons. The outside buttons shall be class 2 (50 line) of MIL-B-17143.

3.3.11.2 Plastic button. The hidden plastic button for anchoring the left front on the inside of the coat shall be shade Black BT, Cable No. 62001 in accordance with DOD Standard Shade for Buttons, conforming to type II, class D, style 20 and 21, 45-line of V-B-871. As an alternate, the 50 line plastic anchor design button in paragraph 3.3.11.1 may be used.

3.3.12 Hanger loop. The hanger loop shall be cotton tubular braid conforming to type III, class 1 of MIL-B-371, except that the color shall be black. The dyed braid shall show good fastness to wet-dry cleaning and shall show an AATCC Rating for crocking not lower than 3 when tested as specified in Table III.

3.3.13 Labels.

3.3.13.1 Combination label. Each overcoat shall have a combination personal identification and instruction label that conforms to type VI, classes 10 and 15 of DDD-L-20. The printing on the label shall show fastness to dry cleaning. The label shall bear the following inscription:

## MIL-O-2414H(NU)

NAME:  
 SERVICE NO.:  
 OVERCOAT, MAN'S, ENLISTED (100% WOOL)  
 CONTRACT NO.: DLA 100-00-0-0000 (EXAMPLE)  
 NAME OF CONTRACTOR:  
 NAME OF MANUFACTURER: (If other than contractor)

DRY CLEAN ONLY

3.3.13.2 Size label. A separate label conforming to type VI, class 2 of DDD-L-20 shall indicate the size and stock number.

NOTE: The length (short, regular, long, or extra-long) may be abbreviated as S, R, L, or XL.

3.3.13.3 Removable size ticket. Each coat shall have a commercial type size ticket attached to the outside of the lower left sleeve. The ticket shall be 1-1/2 inches long and 2 inches high, made of a suitable plain white cardboard. The corners of the ticket may be double perforated for ease in tacking. The size (38R - Example) shall be printed or stamped on the upper left hand corner in black or blue ink. The lettering for the size shall be 1/4 inch in height. Abbreviations for lengths shall be allowed in accordance with 3.3.13.2.

3.4 Design. The double breasted overcoat is fleece lined (fleece side of lining away from the wearer), with napped-back satin sleeve and yoke linings, convertible collar, two outside slash pockets (Beason), a cash pocket within the right outside pocket, a right inside breast pocket opening on facing, a two-piece back with center vent, and seven 50-line black plastic anchor design buttons with one hidden anchoring button.

3.4.1 Figures. Figures are furnished for information purposes only. To the extent of any inconsistencies between the written specification and the figures, the written specification shall govern.

3.5 Patterns. Standard patterns to be used to cut working patterns will be furnished by the Government (see 6.3). The working patterns shall be identical to the Government patterns. Neither the Government patterns nor the working patterns shall not be altered in any way, except that additional notches for use during construction are permitted on the working patterns. Also, minor modifications are permitted where necessary when using automatic equipment. These modifications shall not alter the dimensional, serviceability, or appearance requirements cited in the specification. Unless otherwise specified in Table II, seam allowances shall be as follows:

Joining center back and side seams	1/2 inch
Joining shoulders, armholes, sleeves	3/8 inch
Joining facings to fronts	1/8 to 3/16 inch
Joining linings and yokes at sides and back	1/2 inch
Joining shoulders and sleeves of lining	3/8 inch
Joining undercollar to neckline	5/8 inch

## MIL-O-2414H(NU)

3.5.1 Pattern parts. The component parts of the overcoat shall be cut from materials as specified and in accordance with the number of parts required for the manufacturing process as follows:

<u>Material</u>	<u>Nomenclature of pattern parts</u>	<u>Cut parts</u>
Cloth, melton, wool	Front	2
	Back	2
	Front Facing	2
	Topsleeve	2
	Undersleeve	2
	Topcollar	1
	Topcollar (Alternate) <u>1</u> /	1
	Undercollar Front	2
	Undercollar Back	2
	Front Pocket Facing (Beason)	2
Pocket welt (inside breast pocket)	1	
Cloth, lining, fleece	Front Lining	2
	Back Lining, Left Side	1
	Back Lining, Right Side	1
Cloth, lining, satin	Front Yoke	2
	Back Yoke	1

1/ Use with undercollar shaper (alternate)

### 3.6 Construction.

## MIL-O-2414H(NU)

3.6.1 Stitches, seams, and stitchings. Stitch, seam, and stitching types specified in Table II shall conform to FED-STD-751. Wherever two or more methods for seam or stitch types are given for the same part of the operation, any one may be used. Seam allowances shall be maintained with seams properly sewn so that no raw edges, runoffs, twists, pleats, puckers, or open seams result. All seams shall start and finish evenly. Thread tension shall be maintained so that there is no tight or loose stitching. Where stitch type 401 is used, the looper (under thread) shall be on the inside of the overcoat. Ends of all seams produced by stitch type 401 shall be caught in other seams or stitching. Unless otherwise specified, edgestitching shall be 1/2 inch from the folded edge. When no range or tolerance is given for gauge of stitching, 1/16 inch variation is permitted. Edgestitching shall be straight and parallel to the edge.

3.6.2 Thread breaks and ends of seams. Ends of all seams and stitchings, when not caught in other seams or stitchings, shall be backtacked not less than 3/8 inch. The ends of a continuous line of stitching (except label) shall be overlapped not less than 1/2 inch. The ends of the label stitching shall be overlapped not less than 3 stitches. Thread breaks (all stitch types) shall be secured by stitching back of the break not less than 1/2 inch. Skipped stitches or thread breaks may be repaired by using 301 stitch type.

3.6.3 Stitches per inch. The minimum and maximum number of stitches per inch shall be specified in Table II.

3.7 Manufacturing operations requirements. The overcoats shall be manufactured in accordance with operation requirements specified in Table II. The contractor is not required to follow the exact sequence of operations listed provided that the finished overcoats are identical to those produced by following the sequence of operations as listed in Table II. Minor modifications are permitted where necessary when using automatic equipment. These modifications shall not alter the dimensional, serviceability, or appearance requirements cited in the specification.

3.7.1 Shade and size marking. The component parts shall be marked or ticketed to insure a uniform shade and size throughout the overcoat. Any method may be used except:

- (1) Corrosive metal fastening devices. No metal device or sew-on type marking shall be used on the satin lining.
- (2) Adhesive type tickets which discolor or adhere to the material upon removal of tickets.

NOTE: The use of ink pad numbering machine, rubber stamp, or pencil is allowed, provided the numbering does not show on the outside of the overcoat and wherever possible, is covered by the seam allowance.

3.7.2 Pressing and fusing. All pressing operations referenced in Table II shall use a heated pressing iron and steam pressing machines designed specifically for the pressing operations being performed. Fusible tape shall be applied in accordance with the fusible manufacturer's recommended time, temperature, and pressure settings and in accordance with good commercial practice.

## MIL-O-2414H(NU)

3.7.3 Abbreviations in table of operations. The abbreviations used in Table II are as follows:

Stch	-	Stitch
in	-	inch
Ndl	-	Needle
Bob	-	Bobbin
Lpr	-	Looper
Mchne	-	Machine
Brtck	-	Bartack
Comrcl	-	Commercial
smlr	-	similar
Btnhl	-	Buttonhole
incl	-	including
dbl	-	double

TABLE II - CONSTRUCTION OF OVERCOAT

No.	Operation	Stch Type	Seam/ Stch type	Stch in	Threa: Ndl B L
-----	-----------	--------------	--------------------	------------	----------------------

1. Cutting.

a. Cut the overcoats in strict accordance with the patterns provided which show size, shape, directional lines, and notches for proper assembly of all parts. Marking, spreading, and cutting procedures used shall be consistent with the precision results required for the proper construction of the overcoat. Perforated and plain paper markers are prohibited on the basic fabric. Felt back paper markers are permitted.

b. Cut the component woolen parts of the overcoat from one piece of material, except the undercollar parts and pocket facing and welt which may be cut from ends. When so cut, these parts shall approximate the shade of the corresponding overcoat. The basic material shall be spread in the lengthwise direction with the nap of all plies running in the same direction. Accordingly, when making markers, all patterns of the component woolen parts shall be positioned so that the nap on the completed overcoat will run in one direction, either up or down. The undercollar parts shall be shade marked and shall match each other when assembled. When alternate topcollar is used it may be die cut.

c. Cut the component lining parts of the overcoat from one piece of material.

NOTE: (1) The fleeced or pile side of the knit lining material shall be considered the back side, and the unfleeced side, or smooth surface, shall be considered the face and shall finish toward the wearer.

(2) The smooth, satin surface of the material for the yoke and sleeves shall be considered the face side.

TABLE II - CONSTRUCTION OF OVERCOAT

No.	Operation	Stch Type	Seam/ Stch type	Stch in	Threa Ndl B L
	i. Crease undercollar at breakline and press on a suitable pressing buck. Center area of creaseline shall be straight for a distance of 3 to 4 inches.				
	j. Unless alternate undercollar shaping is performed as prescribed in operation 4.f., mark and shape the undercollar with undercollar shaper.				
	k. Trim, where necessary, ends and outer edge of undercollar interlining. Trim interlining not more than 3/16 inch from the neck edge of undercollar.				
	l. Position, face to face, center of topcollar to center seam of undercollar. Stitch the topcollar to the undercollar 3/16 inch from edge, along the ends and outer edge putting fullness on topcollar, and making certain points are uniformly shaped. Trim excess topcollar material.	301	SSa-1	12-14	50 5
	NOTE: Use the topcollar cut from the alternate topcollar pattern when undercollar is shaped with the alternate undercollar shaper (see operation 4.f.). Omit trimming.				
	m. Turn collar to finished position. Baste along ends and outer edge, distributing the collar fullness evenly and rolling the joining seam to the underside. Trim neck edge of topcollar to allow for seaming and proper roll.		Hand or Mchne		
	n. Press collar, stretching the outer edge to conform to the shoulder contours, and removing excess fullness.				
5.	<u>Make sleeves.</u>				
	a. Sleeves shall be set-in type consisting of a topsleeve and undersleeve.				
	b. With face sides together, distribute fullness of the forearm seam of woolen sleeve, align notches and stitch 3/8 inch from raw edge.	301 or 401	SSa-1	12-14	50 5 50 7

24.	<p><u>Pressing.</u>            Finished appearance. Edges of the collar, lapels, fronts and bottoms shall be smooth and flat. Shoulders shall be molded and shaped to body contours with no excess fullness. The fronts, sides and backs shall be smooth and flat with no excess fullness. The left vent shall lap smoothly over the right with no distortion or pressing impressions at the back of the overcoat. Fullness in the tops of the sleeves shall be shrunk in. Sleeves shall roll smoothly with no breaks, twists, or creases. The collar breakline shall be maintained with a soft crease and the collar edges shall be shaped and stretched over the shoulders. Lapel notches (gap between top edge of lapels and collar ends) shall be uniform. The break line crease shall extend from the gorge line midway into the lapel. The remaining lapel shall roll at the breakline. Fullness (shaping) over topcollar, lapel facing and the lower left coat front shall be maintained so that they roll inward, allowing their edges to rest against the body of the overcoat. The collar and lapels shall finish uniform and in accordance with the finished collar and lapel shapers.</p>				
	a. Press the edge of lapels, fronts, collar, and bottom of the overcoat on edge pressing machine.				
	b. Press entire body of overcoat complete on suitable pressing machine.				
	c. Roll press sleeves.

TABLE II - CONSTRUCTION OF OVERCOAT

No.	Operation	Stch Type	Seam/ Stch type	Stch in	Threa Ndl B )/ L :
	d. Press collar on suitable collar pressing machine stretching outer edge of collar over shoulder area.				
	e. Press armholes and shoulders on armhole or shoulder machine.				
	f. Press armhole solid from the inside, creasing the armhole from not less than 1/2 inch above the backarm seam to not less than 4 inches from the front shoulder seam. The armpit and back of the armhole shall be held short and pressed flat.				
	g. Press lapels. The lapels shall be soft creased from the breakline of the collar, and roll pressed from midway between the gorge seam to the bottom of the lapel.				
	h. Block armholes and shrink topsleeve with suitable pressing machine.				
25.	<u>Finish pressing.</u>				
	a. Press yoke smooth and flat with a hand iron.				
	b. Touch up any area missed by hand or machine pressing.				
	c. Remove gloss, creases, and all pressing impressions.				
	d. Place overcoat on hanger until thoroughly dry.				
25.	<u>Mark and sew buttons.</u>				
	a. Plastic anchor design buttons shall be sewn with the anchor in an upright position and aligned with the corresponding buttonholes. No bulging or distortion shall occur when fronts and necks are buttoned.

TABLE II - CONSTRUCTION OF OVERCOAT

No.	Operation	Stch Type	Seam/ Stch type	Stch in	Thre Ndl B I :
	b. In addition to the number of stitches required for sewing on buttons, hand or machine sewn buttons on right front and the hidden button used to anchor right front to inside shall have the thread tightly wrapped not less than four times around to form a 1/8 to 3/16 inch shank. Thread ends on all buttons shall be hidden and securely tied off with not less than 2 stitches.				
	c. Fronts - six buttons, three on each front as follows:			Stchs per button	
	(1) Top button - through all plies. (Breast pocket shall not be caught in stitching).	Hand or		4 (dbl thread) or	12/4 16/4
	(2) Center button - lower ply of pocketing and plies of inside breast pocket shall not be caught in button stitching.	101 or 301		22-24	20/4
	(3) Bottom button - catch top ply of front pocketing, front, and interlining only.			14-16	20/4
	Center of each button shall be sewn 6 (+ 1/4) inches from the finished front edge.				
	NOTE: Pattern markings should be used as a guide only, pending amount of trimming performed in operation 14.				
	d. Sew one 50 line anchor button on right front lapel through facing and smoothly align with lapel buttonhole.			- as above -	
	e. Sew one hidden button on left front directly under the outside center button, catching the inner ply of the pocketing.			- as above -	

## MIL-O-2414H(NU)

3.8 Sizes and measurements. Finished measurements shall be as shown in Table II. All measurements and tolerances are expressed in inches.

Table II - Sizes and Measurements.

Size	(A) Chest	(B) Sleeve Inseam Length				(C) Center Back Length			
		Short	Regular	Long	X-Long	Short	Regular	Long	X-Long
30	42	17	18	19	20	29-1/4	30-3/4	32-3/4	34-3/4
32	44	17	18	19	20	29-3/4	31-1/4	33-1/4	35-1/4

52	64	17	18	19	20	33-1/4	34-3/4	36-3/4	38-3/4
Tolerance	+1/2	+1/2	+1/2	+1/2	+1/2	+3/8	+3/8	+3/8	+3/8

NOTE: Refer to figure 1 for A, B, and C measurements.

- (A) Chest - Twice the measurement taken along the base of armhole from left front edge to center back seam with the overcoat laid out open and flat.
- (B) Sleeve inseam length - Measurement shall be taken along sleeve inseam from base of armhole to bottom of sleeve.
- (C) Center back length - Measurement shall be taken from the neckline seam to bottom edge of overcoat.

3.9 Workmanship. The finished overcoat shall conform to the quality of product established by this specification. As a final step in the contractor's production control plan, before formation of a lot, each overcoat shall be buttoned on a model form and examined for selected defects. An overcoat containing a selected defect shall not be included in the end item lot. Selected defects are those defects listed in Table III of MIL-STD-1391. The occurrence of defects shall not exceed the applicable point value or defect limit.

## MIL-O-2414H(NU)

## 4. QUALITY ASSURANCE PROVISIONS

4.1 Responsibility for inspection. Unless otherwise specified in the contract, the contractor is responsible for the performance of all inspection requirements as specified herein. Except as otherwise specified in the contract or order, the contractor may use his own or any other facilities suitable for performance of the inspection requirements specified herein, unless disapproved by the Government. The Government reserves the right to perform any of the inspections set forth in the specification where such inspections are deemed necessary to assure supplies and services conform to prescribed requirements.

4.1.1 Responsibility for compliance. All items must meet all requirements of sections 3 and 5. The inspection set forth in this specification shall become a part of the contractor's overall inspection system or quality program. The absence of any inspection requirements in the specification shall not relieve the contractor of the responsibility of assuring that all products or supplies submitted to the Government for acceptance comply with all requirements of the contract. Sampling in quality conformance does not authorize submission of known defective material, either indicated or actual, nor does it commit the Government to acceptance of defective material.

4.1.2 Certificate of compliance. Where certificates of compliance are submitted, the Government reserves the right to check test such items to determine the validity of the certification.

4.2 Classification of inspection. The inspection requirements specified herein are classified as follows:

1. First article inspection (see 4.3).
2. Quality conformance inspection (see 4.4).

4.3 First article inspection. When required, the first article submitted in accordance with 3.2 shall be inspected as specified for compliance with design, construction, workmanship, appearance, and dimensional requirements.

4.4 Quality conformance inspection. Inspection shall be performed in accordance with MIL-STD-1391.

4.4.1 Component and material inspection. In accordance with 4.1 above, components and materials shall be tested in accordance with all the requirements of referenced specifications, drawings, and standards unless otherwise excluded, amended, modified, or qualified in this specification or applicable procurement documents. In addition, a certificate of compliance shall be furnished for the resin treatment requirements of 3.3.10.2, the fusible tape requirements of 3.3.10.3. In addition, the alternate cotton flannel (3.3.4.2.1) and the cotton braid (3.3.12) shall be tested for the characteristics specified in Table III and in accordance with the referenced test methods of FED-STD-191 whenever applicable. The sample unit for the alternate cotton flannel shall be 2 yards, and the sample unit for the cotton braid shall be 1/2 yard.

## MIL-O-2414H(NU)

Table III Test Methods

Component	Characteristic	Requirement Paragraph	Test Method
Alternate Cotton Flannel	Weight	3.3.4.2.1	5041 <u>1/</u>
	Yarns per inch		
	Warp	3.3.4.2.1	5050 <u>1/</u>
	Filling	3.3.4.2.1	5050 <u>1/</u>
	Breaking Strength		
	Warp	3.3.4.2.1	5100 <u>1/</u>
	Filling	3.3.4.2.1	5100 <u>1/</u>
	Colorfastness to Crocking	3.3.4.2.1	AATCC 8-1977 <u>1/</u>
	Colorfastness to Wet-Dry Cleaning	3.3.4.2.1	5622
Cotton Braid	Colorfastness to Crocking	3.3.12	AATCC 8-1977 <u>1/</u>
	Colorfastness to Wet-Dry Cleaning	3.3.1.2	5622

1/ A certificate of compliance may be substituted and will be acceptable for the stated requirements.

4.4.2 Examination of the end item. Sampling and examination of the end item shall be performed in accordance with the provisions of MIL-STD-1391 and the following defects:

1. Top stitching along welt crooked, not parallel to pocket or misplaced - 1 point
2. One or both sleeve seams not pressed open - 2 points
3. Tacking of sleeve lining seams to sleeve seams omitted or insecure - 1 point
4. Undercollar lower raw edge stitching not uniform for more than 3/4 inch - 1 point
5. Repair of undercollar lower raw edge stitching not accomplished neatly - 2 points
6. Bottom edge of undercollar exposed beyond collar edge - 2 points

4.4.3 Packaging inspection. Packaging inspection shall be in accordance with MIL-STD-1391 or MIL-C-44192 as applicable.

## MIL-O-2414H(NU)

\* 4.4.4 Palletization examination. An examination shall be made to determine that the palletization complies with the section 5 requirements. Defects shall be scored in accordance with the list below. The sample unit shall be one palletized unit load fully packaged. The lot size shall be the number of palletized unit loads in the end item inspection lot. The inspection level shall be S-1 and the AQL, expressed in terms of defects per hundred units, shall be 6.5.

<u>Examine</u>	<u>Defect</u>
Finished dimensions	Length, width, or height exceeds specified maximum requirements.
Palletization	Pallet pattern not as specified. Interlocking of loads not as specified. Load not bonded with required straps as specified.
Weight	Exceeds maximum load limits.
Marking	Omitted; incorrect; illegible; of improper size, location, sequence, or method of application.

## 5. PACKAGING

5.1 Preservation-packaging. Preservation-packaging shall be level A or C (see 6.2).

5.1.1 Level A. Each overcoat shall be unbuttoned and folded as follows:

- (1) Keeping the lining exposed and collar extended, insert on shoulder into opposite shoulder area (base fabric face to face).
- (2) Shape and smooth shoulder area and align front edges with center back seam.
- (3) Fold overcoat in half lengthwise to measure approximately 14 inches by 23 inches. Each overcoat shall be inserted in a snug-fitting clear polyethylene film bag of not less than 0.00125 inch thickness (+ 20% tolerance). All seams and closures shall be formed by heat sealing. A 1/4 inch hole shall be made at one corner of the bag to allow excess air to escape. As an alternate, the polyethylene bag may be of the tuck-in or reverse flap type where a heat seal closure and corner hole are not required.

5.1.2 Level C. Overcoats shall be packaged to afford adequate protection against deterioration and physical damage during shipment from the supply source to the first receiving activity. The package and the quantity per package shall be the same as that normally used by the contractor for retail distribution.

5.2 Packing. Packing shall be level A, B, or C as specified (see 6.2).

## MIL-O-2414H(NU)

5.2.1 Level A. Seven overcoats, of one size and length, packaged as specified in 5.1, shall be packed in a fiberboard shipping container assembled, closed, and reinforced conforming to type CF, class weather-resistant, grade V15C, variety DW, size 3A of MIL-B-17757. The fiberboard for the liner shall conform to type CF, class domestic of MIL-B-17757. Level A packages shall be packed flat, seven in depth within the container with every other one reversed and the length of the bags parallel to the side panels of the container. Each container shall have the contents completely covered on the top and bottom with a sheet of commercial grade kraft paper.

5.2.2 Level B. Seven overcoats, of one size and length, packaged as specified in 5.1., shall be packed in a fiberboard shipping container assembled, closed, and reinforced conforming to type CF, class domestic, grade 275, variety DW, size 3A of MIL-B-17757. The fiberboard for the liner shall conform to type CF, class domestic of MIL-B-17757. Level A packages shall be packed flat, seven in depth within the container with every other one reversed, and the length of the bags parallel to the side panels of the container. Each container shall have the contents completely covered on the top and bottom with a sheet of commercial grade kraft paper.

5.2.3 Level C. Overcoats, packaged as specified in 5.1, shall be packed in a manner to insure carrier acceptance and safe delivery at destination at the lowest transportation rate for such supplies. The quantity per shipping container shall be the same as that normally used by the contractor for retail distribution. Containers shall comply with the U.S. Postal Service Manual, Uniform Freight Classification Rules, or National Motor Freight Classification Rules, as applicable.

5.2.4 Hangar pack. When specified (see 6.2) the coats shall be packaged, packed, palletized and marked in accordance with appendix to MIL-C-44192 in type I containers except the quantity shall be six coats.

5.3 Marking. In addition to any special marking required by the contract or order, shipping containers shall be marked in accordance with MIL-STD-129.

5.3.1 Polyethylene bagged packages. The polyethylene bagged packages, specified in 5.1.1, shall have the required information legibly printed or stamped in black bold letters, 1/4 inch in height, directly on the bag across the center face or on a white paper label inserted within the bag to permit ready identification. The bag or label shall indicate the following information:

STOCK NUMBER  
NOMENCLATURE  
SIZE AND LENGTH

## MIL-O-2414H(NU)

5.4 Palletization. When specified (see 6.2) overcoats, packed as specified in 5.2, shall be palletized on a 4-way entry pallet in accordance with load type Ia of MIL-STD-147. Each prepared load shall be bonded with primary and secondary straps in accordance with the bonding means C, K and L or P. Pallet pattern shall be in accordance with the appendix of MIL-STD-147. The pallet shall be 4-way, Type IV; Type V, class 1, size 2; or Type VIII fabricated from wood group I, II, III or IV, Grade A of NN-P-71, or 4-Way, Style 1, Size A, Type I, Class 1, fabricated from wood groups specified, of MIL-P-15011. Interlocking of loads shall be effected by reversing the pattern of each course. If the container is of size which does not conform to any of the patterns specified in MIL-STD-147, the pallet pattern used shall first be approved by the contracting officer.

## 6. NOTES

6.1 Intended use. The overcoat (Pea Coat) is intended for use by the Navy enlisted male personnel.

6.2 Ordering data. Procurement documents should specify the following:

- a. Title, number, and date of this specification.
- b. Sizes and lengths required (see 1.2).
- c. When first article inspection is required (see 3.2). (When required, the item tested should be a first article sample. The contracting officer should include specific instructions in acquisition documents regarding arrangements for examinations, quantity, and approval of the first article.)
- d. Levels of packaging and packing required (see 5.1 and 5.2).
- e. When palletization is required (see 5.4).

6.3 Samples and patterns. For access to samples and patterns, address the procuring activity issuing the invitation for bids.

6.4 Subject term (key word) listing:

Wool, melton  
Peacoat  
Overcoat, double breasted  
Coat, enlisted

**INSTRUCTIONS:** In a continuing effort to make our standardization documents better, the DoD provides this form for use in submitting comments and suggestions for improvements. All users of military standardization documents are invited to provide suggestions. This form may be detached, folded along the lines indicated, taped along the loose edge (*DO NOT STAPLE*), and mailed. In block 5, be as specific as possible about particular problem areas such as wording which required interpretation, too rigid, restrictive, loose, ambiguous, or was incompatible, and give proposed wording changes which would alleviate the problems. Enter in block 6 any remarks not related to a specific paragraph of the document. If block 7 is filled out, an acknowledgement will be mailed to you within 30 days to let you know that your comments were received and are being considered.

**NOTE.** This form may not be used to request copies of documents, nor to request waivers, deviations, or clarification of specification requirements on current contracts. Comments submitted on this form do not constitute or imply authorization to waive any portion of the referenced document(s) or to amend contractual requirements.
