MILITARY SPECIFICATION

OVERCOAT, MAN'S, ARMY GREEN 44, WITH REMOVABLE LINER

- * This specification is approved for use by the U.S. Army Natick Research, Development and Engineering Center, Department of the Army, and is available for use by all Departments and Agencies of the Department of Defense.

1. SCOPE

1.1 Scope. This document covers a wool or polyester and wool gabardine overcoat and a detachable wool liner.

1.2 Classification. The overcoats shall be of one type and two classes in the sizes listed below:

Class 1 - Wool Gabardine, AG 44

Class 2 - Polyester and Wool, Gabardine, AG 44

Schedule of sizes (chest size)

X-short	Short	Regular	Long	X-long
	30	30		
32	32	32	32	
34	34	34	34	34
36	36	36	36	36
38	38	38	38	38
40	40	40	40	40
42	42	42	42	42
	44	44	44	44
	46	46	46	46
	48	48	48	48

- * Beneficial comments (recommendations, additions, deletions) and any pertinent data which may be of use in improving this document should be addressed to: U.S. Army Natick Research, Development, and Engineering Center, Natick, MA 01760-5014 by using the self-addressed Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document or by letter.

AMSC N/A

DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.

MIL-0-43537C(GL)

2. APPLICABLE DOCUMENTS

2.1 Government documents.

* 2.1.1 Specifications, standards, and handbooks. The following specifications, standards, and handbooks form a part of this specification to the extent specified herein. Unless otherwise specified, the issues of these documents shall be those listed in the issue of the Department of Defense Index of Specifications and Standards (DODISS) and supplement thereto, cited in the solicitation.

* (Copies of specifications, standards, and handbooks required by contractors in connection with specific acquisition functions should be obtained from the contracting activity or as directed by the contracting activity.)

* 2.2 Other publications. The following documents form a part of this specification to the extent specified herein. Unless otherwise specified, the issues of the documents which are DOD adopted shall be those listed in the issue of the DODISS specified in the solicitation. Unless otherwise specified, the issues of documents not listed in the DODISS shall be the issues of the nongovernment documents which are current on the date of the solicitation.

* AMERICAN SOCIETY FOR TESTING AND MATERIALS

D 3951 - Standard Practice for Commercial Packaging

(Copies may be obtained from the American Society for Testing and Materials, 1916 Race Street, Philadelphia, PA 19103.)

* (Nongovernment standards and other publications are normally available from the organizations which prepare or which distribute the documents. These documents also may be available in or through libraries or other informational services.)

* 2.3 Order of precedence. In the event of a conflict between the text of this specification and the references cited herein, the text of this specification shall take precedence. Nothing in this specification, however, shall supersede applicable laws and regulations unless a specific exemption has been obtained.

MIL-0-43537C(GL)

3. REQUIREMENTS

- * 3.1 First article. When specified in the contract or purchase order, a sample shall be subjected to first article inspection (see 4.3, 6.2, and 6.4).
- * 3.2. Guide samples. Guide samples, when furnished, are solely for guidance and information to the contractor (see 6.3). Variations from this document may appear in the samples, in which case this document shall govern.
- * 3.3 Materials. Materials shall be as specified herein (see 6.5).
 - 3.3.1 Basic material for overcoat.
 - * 3.3.1.1. Class 1 overcoat. The basic material for the class 1 overcoat shall be wool, gabardine, Army Green 44, conforming to type I, class 5 of MIL-C-10176.
 - * 3.3.1.2 Class 2 overcoat. The basic material for the class 2 overcoat shall be polyester and wool, gabardine, Army Green 44, conforming to type II, class 10 of MIL-C-10176.
 - 3.3.2 Basic material for liner. The basic material for the liner shall be wool flannel lining, conforming to MIL-C-3191, except the color shall be Army Green 280 and the colorfastness requirement to light shall not apply.
 - 3.3.3 Lining. The material for lining overcoat and liner; for slide fastener bellows piece and facing for lower pocket openings; for binding side and center back seams, edges of vent and back edges of front facing, lower pocket openings (when applicable) and neck facing of overcoat; for binding outer edges, vent edges, slash openings, sleeve and armhole opening of liner; shall be Army Green 45, rayon cloth conforming to class 1 of MIL-C-368.
 - 3.3.4 Interlining for fronts. The interlining for fronts shall conform to type III of MIL-C-15065, except the applicable pattern parts listed in 3.5.1 of this document shall be used.
 - 3.3.5 Collar and belt interlining. The material for interlining collar and belt shall be cotton buckram cloth, natural or bleached, conforming to type I, class 2 of CCC-C-438.
 - 3.3.6 Undercollar material. The undercollar material shall be wool flannel conforming to MIL-C-15062 or a felt-fabric composite conforming to MIL-C-29137. The color shall be Army Green 48. The colorfastness requirements to perspiration and crocking in both documents shall not apply.
 - 3.3.7 Wigan for sleeve bottoms. The material for interlining sleeve bottoms shall be cotton wigan conforming to type I of MIL-C-16375.

MIL-0-43537C(GL)

* 3.3.8 Sheeting for inside hanging pocket. The lining for inside hanging pockets shall be a soft filled cotton sheeting, having a smooth suede finish on one side, dyed black or other suitable colors in dark shades, conforming to the following requirements when tested as specified in 4.4.1.1:

Weight per square yard (minimum)	6.0 ounces
Yarns per inch (minimum)	Warp - 44
	Filling - 40

Breaking strength (load-pounds minimum):	Warp - 60
	Filling - 35

The dyed and finished cloth shall contain no more labile sulfur than shown by the standard sample when tested as specified in 4.4.1.1. The finished material shall show "good" fastness to wet-dry-cleaning when tested as specified in 4.4.1.1.

3.3.9 Silesia. The material for stay pieces and interlining of shoulder loops shall be cotton silesia, dyed black, conforming to type I of MIL-C-326, except that the non-fibrous material content and colorfastness requirements for perspiration and crocking shall not apply. As an alternate to the silesia, cloth conforming to class 1 of MIL-C-43718 may be used.

3.3.10 Sleeve head pad. The sleeve head pad shall conform to type IV of MIL-P-15064.

3.3.11 Tapes. The tape shall be bleached or unbleached, preshrunk, conforming to type I, class 1 or 2 of DDD-T-86, except that the non-fibrous material content shall not apply, in the following widths:

- 3/8 or 1/2 inch for staying front edges
- 5/8 inch for bridle at breakline of overcoat
- 1/4 inch for staying armholes, gorge, and vent of overcoat
- 3/8 inch for pocket welt

3.3.12 Braid. The braid for coat hanger shall be dyed Army Green 44 and shall conform to type IX, class 1 of MIL-B-371.

3.3.13 Shoulder pad. The shoulder pad shall conform to type I of MIL-P-15064.

3.3.14 Labels. Each overcoat shall have an identification label, a size label, an instruction label, and a size ticket. Each liner shall have an identification and size label. The labels shall conform to type VI of DDD-L-20 and shall show fastness to drycleaning.

MIL-0-43537C(GL)

3.3.14.1 Identification label. The identification label shall conform to class 1.

3.3.14.2 Size label. The size label shall conform to class 2.

* 3.3.14.3 Instruction label. The instruction label shall conform to class 3 except that the text shall be as shown on figure 3 with the letters for caption not less than 5/32 inch in height and all other letters not less than 1/8 inch in height. The size of the label shall be $4 \pm 1/8$ by $2\frac{1}{4} \pm 1/8$ inches.

3.3.14.4 Size ticket. The size ticket shall be made of a suitable commercial cardboard and shall measure 2-1/8 by 1-1/2 inches. The size shall be printed on the ticket; for example, "36R" with letters and numerals not less than 1/4 inch in height, together with title of document.

3.3.14.5 Combination label. The identification label (class 1) and the instruction label (class 3) may be combined into one label. The combination label shall conform to the requirements of the class 3 label.

3.3.15 Thread.

3.3.15.1 Cotton thread. The cotton thread shall conform to V-T-276 in the following types and sizes:

Use	Type	Ticket No.	Ply
Seaming and stitching overcoat	IA3	30, 50	3
		70	2
Button sewing:			
Hand	IA3 or IB3	12 or 16	4
Machine	IA3 or IB3	20	4

NOTE: The cotton thread for basting shall be of commercial grade.

A monofilament synthetic thread may be used for those basting operations where the thread is required to be removed, provided the garment is subsequently given a treatment by a dry-cleaning agent in which the synthetic thread is soluble. When this thread is used, any residue remaining on the garment after the dry-cleaning process shall be brushed off or removed.

MIL-0-43537C(GL)

- * 3.3.15.2 Polyester thread. Polyester thread may be used as an alternate to the cotton thread specified in 3.3.15.1. The polyester thread shall conform to the following sizes of MIL-T-43548:

Use	Ticket Number	Ply
Seaming and stitching overcoat	30, 50	2 or 3
	70	2
Button Sewing:		
Hand	30	2 or 3
Machine	30	2 or 3

- * 3.3.15.3 Silk thread. The silk thread shall conform to V-T-301 in the types, sizes, classes and manufacturing uses as follows, except the requirements governing weighting or loading shall not apply.

Uses	Type	Size	Class
Machine-made buttonholes	I	A and B	--
Hand tailored buttonholes	II		1, Subclass
		10	A or B
Hand felling	III	A or C	--
Machine type felling	III	A	--
Outside trim topstitching	I	0	--

- * 3.3.15.4 Nylon thread. Nylon thread may be used as an alternate to the silk thread specified in 3.3.15.3. The nylon thread should conform to the following types and sizes of V-T-295. If an automatic machine which sews and shanks (wraps) the button in one operation is used, the thread shall conform to type III, size ff, waxed physical and colorfastness requirements.

Use	Type	Size	Class
Hand or machine type felling	IV	A and C	A
Making buttonholes and bartacks	V	10	A
Machine stitching	VI	0	A

MIL-0-43537C(GL)

3.3.15.4 Color. The threads shall be dyed Army Green E. C.A. 66034.

3.3.15.5 Colorfastness. The dyed thread (except for seaming linings) shall show fastness to wet-dry-cleaning and light equal to or better than the standard sample. The thread for seaming of linings shall show fastness to wet-dry-cleaning equal to or better than the standard sample. When no standard sample is available, the dyed thread shall show "good" fastness to wet-dry-cleaning and light as applicable.

3.3.16 Gimp. The cotton gimp for reinforcing buttonholes shall conform to type I or II, size 8 of V-T-280.

3.3.16.1 Color. The gimp shall be dyed Army Green E, C.A. 66034.

3.3.16.2 Colorfastness. The dyed gimp shall show fastness to wet-dry-cleaning equal to or better than the standard sample. When no standard sample is available, the dyed gimp shall show "good" fastness to wet-dry-cleaning.

* 3.3.17 Slide fastener. The slide fastener for the overcoats with liner shall be type IV, style, 1, size LS, with short tab pull and brass chain, conforming to V-F-106. The length of the fastener shall be 84 inches for regular, long and X-long sizes; and 78 inches for short and X-short sizes.

3.3.17.1 Tape for slide fastener. The slide fastener tape shall be dyed Green, Shade X, Cable No. 66524. The dyed tape shall show fastness to wet-dry-cleaning equal to or better than the standard sample.

3.3.18 Buckle. The buckle shall be a 2-1/4 inch slide buckle conforming to class 3 of MIL-B-1860. The color of the buckle shall be Army Green Shade BR, Cable No. 62015.

3.3.19 Buttons. The buttons shall conform to type II, class D; style 20 or 21, sizes 24-line, 30-line and 45-line; and style 15, 18-line; glossy finish, button shade Army Green BR, Cable 62015, conforming to V-B-871.

MIL-0-43537C(GL)

* 3.4 Design. The design of the overcoat shall be: a double-breasted model, lined to waist, with a convertible collar, and an all-around belt with buckle supported by belt loops; lower welt pockets with a through opening, sleeve tabs, and shoulder loops to button; and a center back vent, lapped on the right. The overcoat shall be provided with a detachable liner which can be fastened into the overcoat. The liner shall be sleeveless, with all outside edges and edges of slash opening and armholes bound. The overcoat is designed so that it may be worn with or without the liner.

3.5 Patterns. Standard patterns will be furnished by the Government. The patterns show size, seam allowance, shape, shape and placement of pockets, directional lines for marking in, and include shapers for lapels, undercollar and undercollar stand, and marker for width of pocket welts. The standard patterns shall not be altered in any way and are to be used only as a guide for making the contractor's working patterns, which shall be identical to the standard patterns.

3.5.1 List of pattern parts. The components of the overcoat shall be cut from materials as specified according to the pattern parts indicated:

List of pattern parts

Material	Pattern nomenclature	Cut parts
Cloth, wool, gabardine	Front part	2
	Back part	2
	Top sleeve	2
	Undersleeve	2
	Top collar	1
	Shoulder loops	2
	Belt	1
	Front facings	2
	Sleeve tab	4
	Neck facing	1
	Top collar stand	1
	Inside hanging pocket	2
	Pocket welt	2

1/ Alternate pattern parts provided for constructing the back lining (yoke), back liner, and back liner lining in one piece.

MIL-0-43537C(GL)

- * 3.6 Construction. The construction shall conform in all respects to the requirements in table I and herein.
- * 3.6.1 Stitches, seams, and stitching. Stitch, seam, and stitching types, specified in table I, shall conform to FED-STD-751. Where two or more seam or stitching types are given for the same operation, any one of them may be used. Seam allowances shall be maintained with seams sewn so that no raw edges, runoffs, twists, pleats, puckers or open seams will result. All seams shall start and finish evenly. Thread tension shall be maintained so that there is no tight or loose stitching. The edge and top stitching shall be uniformly gaged throughout the garment.

3.6.1.1 Type 301 stitching. Ends of all stitching shall be backstitched or overstitched 1/2 inch minimum except when caught in other stitching or turned under in a hem. Thread tension shall be maintained so that there will be no loose stitching resulting in puckering of material sewn. The lock shall be embedded in the material sewn.

3.6.1.1.1 Repairs of type 301 stitching. Repairs of type 301 stitching shall be as follows:

a. When thread breaks or bobbin run-outs occur during sewing, the stitching shall be repaired by restarting the stitching a minimum of one inch behind the end of the stitching. 1/

b. Thread breaks, two or more consecutive skipped stitches or run-off stitches noted during inspection of the item (in-process or end item) shall be repaired by overstitching. The stitching shall start a minimum of one inch before the defective area and continue a minimum of one inch beyond the defective area onto the existing stitching. Loose or excessively tight stitching shall be repaired by removing the defective stitching, without damaging the materials, and restitching in the required manner. 1/

1/ When making the above repairs, the ends of the stitching are not required to be backstitched.

3.6.1.2 Type 401 stitching. Thread tension shall be maintained so that there will be no loose stitching. Both ends of all seams or stitching produced with a 401 stitch type, when not turned under in a hem or held down by other stitching, shall have a 1/2 to 3/4 inch chain extending beyond each end. The looper (under thread) shall always be on the inside of the overcoat and on the coatside of the liner. All repairs shall be in accordance with 3.6.1.1.1a or 3.6.1.1.1b. Repairs may be made using 301 stitch type.

MIL-0-43537C(GL)

3.6.1.3 Automatic stitching. Automatic stitching machines may be used to perform any of the required stitch patterns provided the requirements of the stitch pattern, stitches per inch, size and type of thread are met, and at least three tying, overlapping or backstitches are used to secure the ends of the stitching.

3.6.1.4 Thread ends. All thread ends that are visible on the finished item shall be trimmed to a length of not more than 1/4 inch.

3.6.2 Buttonholes. All buttonholes shall be cut first type buttonholes of the eyelet end, square bar type, worked over gimp, with the gimp pulled through to the underside. The ends of the buttonholes shall be bartacked in a separate operation from the buttonhole making, with 21 stitches per bartack using silk size A upper and lower thread; or buttonholes may be tacked by hand, using No. 10 silk, with not less than 6 stitches per tack; or front buttonholes may be made by hand, using No. 10 silk.

- * 3.6.3 Bartacks. Bartacks shall measure 1/4 to 1/2 inch long and be free from thread breaks and loose stitching.
- * 3.7 Repairs. Repairs such as mends, darns, patches or splices are not permitted on the coat.

3.8 Manufacturing operations requirements. The overcoats shall be made by and with the use of all operations listed in table I. The contractor is not required to follow the exact sequence of operations or sub-operations shown unless otherwise specified. Any additional basting or holding stitching used to facilitate manufacture is permissible provided that the threads are removed or do not show in the finished overcoat or liner.

- * 3.9 Figures. Figures 1 through 5 are furnished for information purposes only. If there are any inconsistencies between the written document and the figures, the written document shall control.

3.10 Pressing. Unless otherwise specified, all pressing specified in table I shall be accomplished by heated pressing iron or machine.

MIL-O-43537C(GL)

NO.	TABLE I MANUFACTURING OPERATIONS REQUIREMENTS	STITCH TYPE	SEAM AND STITCHING TYPE	STITCHES PER INCH	THREAD NEEDLE	ROBBIN/LOOPER COVER
1. <u>Cutting.</u> <ul style="list-style-type: none"> a. Cut all parts out of one piece of material in strict accordance with patterns furnished which show directional lines, size, shape, placement of pockets and notches for assembling of all parts, except inside hanging pockets and underly of sleeve tabs, which may be cut from ends. The use of perforated paper markers is prohibited on the gabardine cloth. Drill holes for component marking is prohibited. b. Parts cut from ends shall approximate the shade of overcoat. c. The welt pieces shall be cut in such a manner that the twill line of the fronts and welts will run in the same direction in the finished overcoats. d. Cut slash opening on fronts of wool liner as indicated on pattern. e. Belt sizes 42 and larger may be cut in two pieces with the seam running across the width of the belt. In the finished belt, the piecing shall be towards buckle end of belt. f. Cut belt loops and keeper (strip cut) in the direction of the warp, of sufficient width and length to finish in accordance with operations 23, 24 and 48b. g. The pocket openings may be die cut in the cutting room as indicated by pocket opening mark on pattern. The pocket opening shall not be tongue notched in the cutting room. 						

MIL-O-43537C(GL)

NO.	MANUFACTURING OPERATIONS REQUIREMENTS	STITCH TYPE	SEAM AND STITCHING TYPE	STITCHES PER INCH	THREAD	
					NEEDLE	ROBBIN/LOOPER
1.	<u>Cutting.</u> (cont'd)					
	h. Center top collar shaper on top collar and recut to conform to the shaper.					
2.	<u>Cut linings.</u>					
	Cut all parts of the lining for the overcoat and liner in the direction of the warp in accordance with patterns furnished. The overcoat lining parts shall match each other except sleeve lining and pocket facing parts. Sleeve lining parts shall match each other. The liner lining parts shall match each other.					
3.	<u>Cut trimmings.</u>					
	a. Cut all trimmings in strict accordance with patterns furnished, which show size and markings for proper assembling.					
	b. Cut the undercollar cloth and collar interlining in accordance with directional lines on patterns.					
	c. Cut the silesia for the shoulder seams, fore-part of armholes and back neck on the bias $3\frac{1}{4}$ to 1 inch wide.					
	d. Cut the pocket lining in the warp or filling direction.					

NO.	MANUFACTURING OPERATIONS REQUIREMENTS (cont'd)	STITCH TYPE	SEAM AND STITCHING TYPE	STITCHES PER INCH	THREAD NEEDLE	ROBBIN/LOOPER	COVER
3.	<u>Cut trimming.</u> (cont'd)						
	e. Cut the rayon binding for the overcoat and liner $7/8$ to 1 inch wide on the bias from the lining material. Cut the rayon bellows strip from lining material on the bias 2 inches wide. Cut the rayon binding for lower pocket openings (when applicable) from the lining material, on the bias, $1\text{-}1/8$ inches wide.						
4.	<u>Replacement of defective components.</u>						
	During the spreading, cutting and manufacturing process, components having material defects or damages that are classified as defects in MIL-STD-1391 shall be removed from production and replaced with non-defective and properly matched components.						
5.	<u>Marking.</u>						
	The component parts of the overcoat shall be marked to insure a uniform shade and size throughout the garment. Any method of marking may be used except:						
	*						
	a. Corrosive metal fastening devices. No metal device or sew-on type markings shall be used on the rayon lining.						
	b. Adhesive-type tickets which discolor the material or leave traces of paper or adhesive on the material after removal of the tickets.						
	NOTE: The use of an ink pad numbering or machine rubber stamp or pencil is allowed, provided the numbering does not show on the outside of the garment, and wherever possible, is covered by the seam allowance.

MIL-0-43537C(GL)

* 3.12 Workmanship. The finished overcoats shall conform to the quality and grade of product established by this document. As a final step in the contractor's production control plan before formation of the lot, each overcoat shall be buttoned on a model form and examined. An overcoat containing a selected defect shall not be included in the end item lot. The selected defects are those defects listed in MIL-STD-1391 indicated by an asterisk (*). The occurrence of defects shall not exceed the applicable acceptable point value or defect limit.

4. QUALITY ASSURANCE PROVISIONS

4.1 Responsibility for inspection. Unless otherwise specified in the contract or purchase order, the contractor is responsible for the performance of all inspection requirements as specified herein. Except as otherwise specified in the contract or purchase order, the contractor may use his own or any other facilities suitable for the performance of the inspection requirements specified herein, unless disapproved by the Government. The Government reserves the right to perform any of the inspections set forth in this document where such inspections are deemed necessary to assure supplies and services conform to prescribed requirements.

4.1.1 Responsibility for compliance. All items must meet all requirements of sections 3 and 5. The inspection set forth in this document shall become a part of the contractor's overall inspection system or quality program. The absence of any inspection requirements in the document shall not relieve the contractor of the responsibility of assuring that all products or supplies submitted to the Government for acceptance comply with all requirements of the contract. Sampling in quality conformance does not authorize submission of known defective material, either indicated or actual, nor does it commit the Government to acceptance of defective material.

4.1.2 Responsibility for dimensional requirements. Unless otherwise specified in the contract or purchase order, the contractor is responsible for assuring that all specified dimensions have been met. When dimensions cannot be examined on the end item, inspection shall be made at any point, or at all points in the manufacturing process necessary to assure compliance with all dimensional requirements.

4.1.3 Certificate of compliance. When a certificate of compliance is submitted, the Government reserves the right to inspect such items to determine the validity of the certification.

4.2 Classification of inspections. The inspection requirements specified herein are classified as follows:

- a. First article inspection (see 4.3).
- b. Quality conformance inspection (see 4.4).

MIL-0-43537C(GL)

- * 4.3 First article inspection. When a first article is required (see 6.2), it shall be examined for visual and dimensional defects in accordance with the provisions of MIL-STD-1391. The presence of any defect shall be cause for rejection of the first article.
- * 4.4 Quality conformance inspection. Unless otherwise specified, sampling for inspection shall be performed in accordance with MIL-STD-105.
- * 4.4.1 Component and material inspection. In accordance with 4.1 above, components and materials shall be inspected in accordance with all the requirements of referenced documents unless otherwise excluded, amended, modified or qualified in this document or applicable purchase document.
- * 4.4.1.1 Testing of cloth, cotton sheeting. In addition to testing provisions contained in subsidiary documents, testing shall be performed on the component listed in table IV for characteristics noted. The method of testing specified in FED-STD-191, wherever applicable and as listed in table IV shall be followed. All requirements are applicable to the sample unit. Unless otherwise specified in subsidiary documents, sampling shall be in accordance with the following:

<u>Lot size</u>	<u>Sample size</u>
800 or less	2
801 to 22,000 inclusive	3
22,001 and over	5

The lot shall be unacceptable if one or more sample units fail to meet any test requirement specified. All test reports shall contain the individual values utilized in expressing the final result. The sample unit for testing the cotton sheeting cloth shall be one yard full width. The lot size shall be expressed in yards.

TABLE IV. Test methods

<u>Characteristic</u>	<u>Requirement paragraph</u>	<u>Test method</u>
Material identification	3.3.8	1200 1/
Weight	3.3.8	5041
Yarns per inch	3.3.8	5050
Breaking strength	3.3.8	5100
Colorfastness to wet-dry cleaning	3.3.8	5622
Sulfur dyes	3.3.8	2020

1/ Accept on contractor's certificate of compliance.

MIL-0-43537C(GL)

- * 4.4.1.2 Certification. The contractor shall furnish a certificate of compliance for Government approval for the material identification requirement specified in 3.3.8.
- * 4.4.2 In-process inspection. Inspection of sub-assemblies shall be made to ascertain that construction details which cannot be examined in the finished product are in accordance with specified requirements. The Government reserves the right to exclude from consideration for acceptance, any material or service for which in-process inspection has indicated nonconformance.
- * 4.4.3 End item examination. Sampling and examination for the end item and packaging shall be performed in accordance with MIL-STD-1391. The end item shall conform to the dimensions specified in tables II and III.
- * 4.4.4 Palletization examination. The fully packaged and palletized end items shall be examined for the defects listed below. The lot size shall be expressed in units of palletized unit loads. The sample unit shall be one palletized unit load, fully packaged. The inspection level shall be S-1, and the AQL, expressed in terms of defects per hundred units, shall be 6.5.

<u>Examine</u>	<u>Defect</u>
Finished dimensions	Length, width, or height exceeds specified maximum requirements.
Palletization	Pallet pattern not as specified. Interlocking of loads not as specified. Load not bonded with required straps as specified.
Weight	Exceeds maximum load limits.
Marking	Omitted; incorrect; illegible; of improper size, location, sequence, or method of application.

5. PACKAGING

- * 5.1 Preservation. Preservation shall be level A or Commercial as specified (see 6.2).
- * 5.1.1 Level A. Each overcoat with liner attached shall be laid flat back down and a paperboard insert conforming to figure 4 placed inside the overcoat fitting into the collar and shoulder area. The overcoat shall be buttoned and belted, and the sleeves positioned full length resting naturally over the pockets. The bottom shall be folded up over the front until the overcoat length measures approximately 36 inches. The top with the inclosed insert shall then be folded down over the bottom the full length of the insert. Each folded overcoat shall measure not more than 25 by 18 inches.

MIL-0-43537C(GL)

- * 5.1.2 Commercial. Overcoats shall be preserved in accordance with ASTM D 3951.
- * 5.2 Packing. Packing shall be level A, B or Commercial as specified (see 6.2).
- * 5.2.1 Level A packing. Six overcoats of one size only, preserved as specified in 5.1, shall be packed flat in a fiberboard shipping container conforming to style RSC-L, grade V2s of PPP-B-636. The inside of each container shall be fitted with a box liner conforming to type CF, class weather-resistant, variety DW, grade V15c or PPP-B-636. Level A unit packs shall be packed flat, alternated top to bottom, six in depth within a shipping container. Inside dimensions of each container shall approximate 25-1/2 inches in length, 18-1/2 inches in width and 10 inches in depth. Approximate dimensions are furnished as a guide only. Each container shall have the contents completely covered on the top and bottom with a sheet of 30-pound minimum basis weight kraft paper conforming to A-A-203. Each shipping container shall be closed in accordance with method III, waterproofed in accordance with method V, and reinforced as specified in the appendix of PPP-B-636, except that the inspection shall be in accordance with MIL-STD-1391. Shipping containers shall be arranged in unit loads in accordance with MIL-L-35078 for the type and class of load specified (see 6.2). Strapping shall be limited to nonmetallic strapping except for type II, class F loads.
- * 5.2.2 Level B packing. Six overcoats of one size only, preserved as specified in 5.1, shall be packed flat in a fiberboard shipping container conforming to style RSC-L, type CF (variety SW), or SF, class domestic, grade 275 of PPP-B-636. The inside of each container shall be fitted with a box liner conforming to type CF, class domestic, variety DW, minimum grade 275 of PPP-B-636. Level A unit packs shall be packed flat, alternated top to bottom, six in depth within a shipping container. Inside dimensions of each container shall approximate 25-1/2 inches in length, 18-1/2 inches in width and 10 inches in depth. Approximate dimensions are furnished as a guide only. Each shipping container shall have the contents completely covered on the top and bottom with a sheet of 30-pound minimum basis weight kraft paper conforming to A-A-203. Each shipping container shall be closed in accordance with method II as specified in the appendix of PPP-B-636, except that the inspection shall be in accordance with MIL-STD-1391.
- * 5.2.2.1 Weather-resistant fiberboard containers. When specified (see 6.2), the shipping container shall be a grade V3c, V3s, or V4s fiberboard box fabricated in accordance with PPP-B-636 and closed in accordance with method III as specified in the appendix of PPP-B-636, except that the inspection shall be in accordance with 5.3 of MIL-STD-1391.
- 5.2.3 Commercial packing. Overcoats, preserved as specified in 5.1, shall be packed in accordance with ASTM D 3951.

MIL-0-43537C(GL)

- * 5.3 Palletization. When specified (see 6.2), overcoats packed as specified in 5.2.2 and 5.2.3 shall be palletized on a 4-way entry pallet in accordance with load type Ia of MIL-STD-147. Pallet types shall be type I (4-way entry), type IV or type V in accordance with MIL-STD-147. Pallets shall be fabricated from wood groups I, II, III, or IV of MIL-STD-731. Each prepared load shall be bonded with primary and secondary straps in accordance with bonding means K and L or film bonding means O or P. Pallet pattern shall be number 90 in accordance with appendix of MIL-STD-147. Interlocking of loads shall be effected by reversing the pattern of each course.
- * 5.4 Marking. In addition to any special marking required by the contract or purchase order, unit packs (bundles), shipping containers and palletized unit loads shall be marked in accordance with MIL-STD-129 or ASTM-D-3951, as applicable.

6. NOTES

- 6.1 Intended use. The overcoat is intended for wear as a service overcoat by male military personnel of the Department of the Army.
- * 6.2 Ordering data. Acquisition documents should specify the following:
 - a. Title, number and date of this document.
 - b. When first article is required (see 3.1, 4.3 and 6.4).
 - c. Size required (see 1.2).
 - d. Selection of applicable levels of preservation and packing (see 5.1 and 5.2).
 - e. When weather-resistant grade fiberboard shipping containers are required for level B shipments (see 5.2.2.1).
 - * f. When palletization is required (see 5.4).
 - * g. Type and class of unit load required (see 5.2.1).
- * 6.3 Samples. For access to samples address the contracting activity issuing the invitation for bids.
- * 6.4 First article. When a first article is required, it shall be inspected and approved under the appropriate provisions of FAR 52.209. The first article should be a preproduction sample. The contracting officer should specify the appropriate type of first article and the number of units to be furnished. The contracting officer should include specific instructions in all acquisition instruments regarding arrangements for selection, inspection, and approval of the first article.
- * 6.5 Recycled material. It is encouraged that recycled material be used when practical as long as it meets the requirements of this document (see 3.3).

Stitch Class 800. - This class of stitch shall be formed with one or more needle threads and has for a general characteristic that the thread does not interloop with itself or any other thread or threads. The thread is passed completely through the material by means of a double pointed center eye needle and returned by another path. This class of stitch simulates hand stitching.

This type of stitch shall be formed with one needle thread which is passed completely through the material and returned by another path after the material has been moved forward one stitch length.

FIGURE 5 - STITCH TYPE 801

INSTRUCTIONS: In a continuing effort to make our standardization documents better, the DoD provides this form for use in submitting comments and suggestions for improvements. All users of military standardization documents are invited to provide suggestions. This form may be detached, folded along the lines indicated, taped along the loose edge (DO NOT STAPLE), and mailed. In block 6, be as specific as possible about particular problem areas such as wording which required interpretation, was too rigid, restrictive, loose, ambiguous, or was incompatible, and give proposed wording changes which would alleviate the problems. Enter in block 6 any remarks not related to a specific paragraph of the document. If block 7 is filled out, an acknowledgement will be mailed to you within 30 days to let you know that your comments were received and are being considered.

NOTE This form may not be used to request copies of documents, nor to request waivers, deviations, or clarification of specification requirements on current contracts. Comments submitted on this form do not constitute or imply authorization to waive any portion of the referenced document(s) or to amend contractual requirements.
