 - a. At least 350 hours simulated "sunshine" per MIL-STD-810, except that light intensity shall be controlled such that the recorded temperature at the geometric center of the periscope block is 160° F \pm 5° F. Intensity shall be controlled by adjustment of the light source to periscope distance and not by varying voltage to the source.
 - b. At least 420 hours steady state, hot-humid (110° F \pm 10° F, relative humidity 70% \pm 10%).
 - c. At least 420 hours cold temperature $(20^{\circ} \text{ F} \pm 5^{\circ} \text{ F})$.

Environmental conditions a. and b. above shall be cycled such that no one condition exposure exceeds 10 hours duration. Environmental condition c. above shall be cycled such that the condition shall not be maintained beyond 70 continuous hours. No test exposure will be followed by a like exposure."
