10 June 1988

SUPERSEDING

MIL-S-24149/1C

1 June 1981

MILITARY SPECIFICATION SHEET

STUD, WELDING, AND ARC SHIELDS (FERRULES);
 TYPE I, CLASS 1,2,3, AND TYPE II, CLASS 1,4,5,5A,6,
 CARBON STEEL, FOR DIRECT ENERGY ARC WELDING

This specification is approved for use within the Naval Sea Systems Command, Department of the Navy, and is available for use by all Departments and Agencies of the Department of Defense.

The requirements for acquiring the studs and arc shields (ferrules) described herein shall consist of this specification and the latest issue of MIL-S-24149 (SH).

NOTE:

1. See requirement 5.

2.250	8
2.500	9
3.000	10
3.500	11

NOTES:

1. Length "L" shown is the overall length of the stud before welding. The stud will be approximately 1/8 to 3/16 inch shorter after welding.
2. Part number includes the stud and the arc shield (ferrule).
3. Dimensions are in inches. Unless otherwise specified, tolerances: decimals $\pm .015$, angles $\pm 2^\circ$.

3. Dimensions are in inches. Unless otherwise specified, tolerances: decimals $\pm .015$, angles $\pm 2^\circ$.

MIL-S-24149/1D(SH)

REQUIREMENTS:

1. Material.
 - a. Studs - carbon steel.
 - b. ARC shield (ferrules) - heat resistant ceramic.
 - c. Welding flux-solid flux or aluminum coated flux.
2. Tensile strength. 50,000 psi minimum.
3. Chemical composition. Studs shall be of the chemical composition indicated in Table XIII.

TABLE XIII. CHEMICAL COMPOSITION.

CARBON	MANGANESE	PHOSPHORUS	SULPHUR	IRON
.23	.90	.040	.050	Remainder

- 1/ The chemical compositions are standard AISI heat analysis and AISI product tolerances shall apply. Unless otherwise specified, values are maximum percentages (AISI 1008 -1022 are acceptable.)
4. Finish. Finish shall be zinc coating or flash copper plating, as specified. When zinc coating is specified, it shall not be within .250 inch from the weld-end.
5. Weld-end design. The stud manufacturer shall be responsible for design of weld ends that will provide a sound weld when used with the proper ferrule.
6. Part number. The part number consists of letter "M", the basic number of this specification sheet, followed by a code indicating the flux on the weld-end, followed by a length dash number taken from TABLES I, II, III, V, VII, IX, XI or XII, followed by a code letter indicating the type of coating.

Weld-end flux -

Add "-" following the basic part number to indicate fluxless weld-end.

Add "A" in lieu of the dash for solid flux weld-end.

Add "C" in lieu of the dash for aluminum flux coated weld-end.

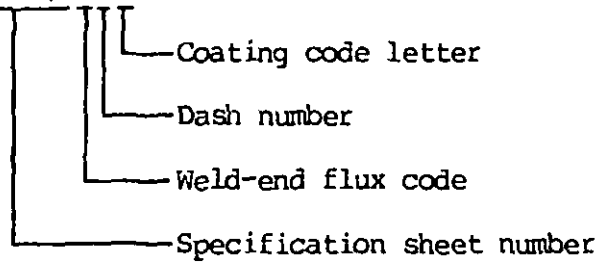

Type of coating -

Add "Z" as a suffix to the dash number for zinc coating.

Add "C" as a suffix to the dash number for flash copper plating.

MIL-S-24149/1D(SH)

Example: M24149/1-7Z

M24149/1-7Z indicates - Type 1, Class 1, welding stud and arc shield;
.1900-32UNF thread; 2.000 inch length; fluxless
weld-end; zinc coated.

M24149/1A111Z indicates - Type I, Class 2, welding stud and arc shield;
.185 O.D.; 2.000 inch length; solid flux
weld-end; zinc coated.

NOTES:

1. Interchangeability - Where the plate thickness permits, Class 5A may be used interchangeably with Class 5.
2. Change from previous issue - Revision letters are not used to denote changes due to the extensiveness of the changes.
