MILITARY STANDARD

AIR CONDITIONERS,
STANDARD FAMILY OF MILITARY AIR CONDITIONERS,
GENERAL APPLICATION CHARACTERISTICS

AMSC N/A

FSC 4120

DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.

MIL-STD-1408B

FOREWORD

1. This military standard is approved for use by all Departments and Agencies of the Department of Defense.

2. Beneficial comments (recommendations, additions, deletions) and any pertinent data which may be of use in improving this document should be addressed to: U. S. Army Belvoir Research, Development, and Engineering Center, ATTN: STRBE-TSE, Fort Belvoir, VA 22060-5606 by using the Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document or by letter.

-----------------------------------	----

MIL-STD-1408B

1. SCOPE

1.1 Scope. This standard serves as a catalog of units comprising the standard family of military air conditioners. It presents capabilities and application characteristics useful in selecting a unit to meet a defined need. In cases where the need is not well defined, reference to Army Materiel Command Pamphlet 706-120, Criteria for Environmental Control of Mobile Systems, is invited and encouraged.

2. REFERENCED DOCUMENTS

2.1 Government documents.

2.1.1 Specifications. The following specifications form a part of this document to the extent specified herein. Unless otherwise specified, the issues of these documents are those listed in the issue of the Department of Defense Index of Specifications and Standards (DODISS), and supplement thereto, cited in the solicitation.

SPECIFICATIONS

MILITARY

MIL-A-52767	- Air Conditioners: Vertical and Horizontal.
MIL-A-52963	- Air Conditioner: Split-Package, 208-Volt, 3-Phase 400-Hertz, AC, 18,000 Btu/Hr Cooling, 30,000 Btu/Hr Heating.
MIL-A-53089	- Air Conditioners: Vertical and Horizontal, Compact, Multiple Power Input.
MIL-A-83216	- Air Conditioner A/E32C-39.

(Unless otherwise indicated, copies of federal and military specifications, standards, and handbooks are available from the Naval Publications and Printing Service Office (NPPSO), Standardization Documents Order Desk, Building 4 D, 700 Robbins Avenue, Philadelphia, PA 19111-5094.)

2.1.2 Government drawings. The following Government drawings form a part of this document to the extent specified herein. Unless otherwise specified, the issues are those cited in the solicitation.

DRAWINGS

TA13217E6898	- Air Conditioner, Vertical, Compact, 60,000 Btu/hr, 208 Volt, 3-Phase, 400 Hertz.
TA13218E9880	- Air Conditioner, Vertical, Compact, 6,000 Btu/hr, 208 Volt, 3-Phase, 400 Hertz.
TA13218E9890	- Air Conditioner, Vertical, Compact, 6,000 Btu/hr, 115 Volt, Single-Phase, 50/60 Hertz.
TA13218E9900	- Air Conditioner, Vertical, Compact, 9,000 Btu/hr, 208 Volt, 3-Phase, 400 Hertz.
TA13218E9905	- Air Conditioner, Vertical, Compact, 9,000 Btu/hr, 115 Volt, Single-Phase, 50/60 Hertz.
TA13218E9910	- Air Conditioner, Vertical, Compact, 9,000 Btu/hr, 208 Volt, 3-Phase, 50/60 Hertz.
TA13218E9915	- Air Conditioner, Vertical, Compact, 9,000 Btu/hr, 230 Volt, Single-Phase, 50/60 Hertz.

MIL-STD-1408B

TA13221E9100	- 18,000 BTUH Split Package Air Conditioner, 18,000 BTUH Cooling, 30,000 BTUH Heating, 208V, 3 Phase, 400 Hertz.
TA13222E9150	- Air Conditioner, Horizontal, Compact, 18,000 Btu/hr, 230 Volt, Single-Phase, 50/60 Hertz.
TA13222E9160	- Air Conditioner, Horizontal, Compact, 18,000 Btu/hr, 208 Volt, 3-Phase, 50/60 Hertz.
TA13222E9170	- Air Conditioner, Horizontal, Compact, 18,000 Btu/hr, 208 Volt, 3-Phase, 400 Hertz.
TA13225E8000	- Air Conditioner, Vertical, Compact, 18,000 Btu/hr, 208 Volt, 3-Phase, 50/60 Hertz.
TA13225E8010	- Air Conditioner, Vertical, Compact, 18,000 Btu/hr, 208 Volt, 3-Phase, 400 Hertz.
TA13225E8200	- Air Conditioner, Vertical, Compact, 36,000 Btu/hr, 208 Volt, 3-Phase, 50/60 Hertz.
TA13225E8210	- Air Conditioner, Vertical, Compact, 36,000 Btu/hr, 208 Volt, 3-Phase, 400 Hertz.
TA13225E8445	- Air Conditioner, Horizontal, Compact, 9,000 Btu/hr, 230 Volt, Single-Phase, 50/60 Hertz.
TA13225E8450	- Air Conditioner, Horizontal, Compact, 9,000 Btu/hr, 115 Volt, Single-Phase, 50/60 Hertz.
TA13225E8455	- Air Conditioner, Horizontal, Compact, 9,000 Btu/hr, 208 Volt, 3-Phase, 50/60 Hertz.
TA13225E8460	- Air Conditioner, Horizontal, Compact, 9,000 Btu/hr, 208 Volt, 3-Phase, 400 Hertz.
TA13225E9500	- Air Conditioner, Horizontal, Compact, 36,000 Btu/hr, 208 Volt, 3-Phase, 50/60 Hertz.
TA13225E9600	- Air Conditioner, Horizontal, Compact, 36,000 Btu/hr, 208 Volt, 3-Phase, 400 Hertz.
TA13228E4000	- Air Conditioner, Vertical, Compact, 60,000 Btu/hr, 208 Volt, 3-Phase, 50/60 Hertz.
TA13228E4200	- Air Conditioner, Horizontal, Compact, 18,000 Btu/hr, 230 Volt-AC, Single-Phase, 50/60 Hertz, and 208 Volt-AC, 3-Phase, 50/60/400 Hertz.
TA13228E4250	- Air Conditioner, Vertical, Compact, 18,000 Btu/hr, 208 Volt-AC, 3-Phase, 50/60/400 Hertz.
TA13228E6700	- Air Conditioner, Horizontal, Compact, 36,000 Btu/hr, 208 Volt-AC, 3-Phase, 50/60/400 Hertz.
D13229E6716	- Receptical, Wall Mounting.
D13229E6718	- Plug, Straight.
TA13229E8100	- Air Conditioner, Vertical, Compact, 36,000 Btu/hr, 208 Volt-AC, 3-Phase, 50/60/400 Hertz.
TA13229E8611	- Air Conditioner: Trailer Mounted, Generator-Set-Powered, 18K Btuh.

(Copies of drawings required by contractors in connection with specific acquisition functions should be obtained from the USA Belvoir Research, Development, and Engineering Center, ATTN: STRBE-FES, Fort Belvoir, VA 22060-5606.)

2.2 Non-Government publications. The following document(s) form a part of this document to the extent specified herein. Unless otherwise specified, the issues of the documents which are DoD adopted are those listed in the issue of the DODISS cited in the solicitation. Unless otherwise specified, the issues of documents not listed in the DODISS are the issues of the documents cited in the solicitation (see 6.2).

MIL-STD-1408B

AMERICAN SOCIETY OF HEATING, REFRIGERATING AND AIR-CONDITIONING ENGINEERS (ASHRAE)

ASHRAE STD 16 - Method of Testing for Rating Room Air Conditioners and Packaged Terminal Air Conditioners.

ASHRAE STD 37 - Method of Testing for Rating Unitary Air Conditioning and Heat Pump Equipment.

(Application for copies should be addressed to the American Society of Heating, Refrigerating and Air-Conditioning Engineers, 1791 Tullie Circle, NE, Atlanta, GA 30329.)

3. DEFINITIONS

3.1 Definitions and abbreviations. The definitions and abbreviations used in this standard are as follows:

A/C	- Air conditioner - A device with the primary function of cooling air. This cooled air is then used to cool equipment and personnel within an enclosure. An A/C may or may not include supplemental heating capability. Usually provides secondary effect of dehumidifying and filtering the air being circulated within the space (see the figures specified in 5.1.8).
Btu	- British thermal units - The quantity of heat required to raise the temperature of one pound of water one degree Fahrenheit at, or near, its point of maximum density (39.1 °F).
Btuh	- British thermal units per hour.
DEPMED	- Deployable medical system.
Dry bulb temperature	- Dry bulb temperature is that measured by an ordinary thermometer. It indicates only sensible heat changes.
EMI	- Electromagnetic interference - The interference with the operation of electronic equipment that is caused by electromagnetic radiation emissions from electromechanical equipment such as air conditioners.
EMP	- Electromagnetic pulse - An intense burst of electromagnetic energy resulting from a nuclear explosion. The energy released can burn out the solid state components used in many A/Cs and shelters hundreds of miles from the blast.
h	- Hour
Hz	- Hertz (a unit of frequency, expressed in cycles per second).
kW	- Kilowatts (1,000 watts).
MPI	- Multiple power input
scfm	- Standard cubic feet per minute - Cubic feet of air flow per minute at 14.69 psi and 58.73 °F conditions.

MIL-STD-1408B

- Wet bulb temperature - Wet bulb temperature is the evaporating water temperature measured by a thermometer, whose bulb is covered by a water-saturated wick, when air is passed over the bulb. It is used with dry bulb temperature to determine humidity.
- Wg - Water gage - Pressure, in inches of water. On the data sheets, this is used to express the external static pressure on the A/C evaporator when describing conditions at which A/C conditioned air flow was measured.

4. GENERAL INFORMATION

4.1 Capacity. All air conditioners have been capacity tested in accordance with American Society of Heating, Refrigerating and Air Conditioning Engineers (ASHRAE) procedures using the temperatures specified in the climatic conditions for capacity ratings listed for each unit.

4.2 Design. All air conditioners, with the exception of the 54,000 DEPMED and 18,000 trailer mounted A/C, covered by this standard have been designed for installation inside or outside of vans, stationary and mobile shelters, and similar enclosures, provided unrestricted outdoor ambient air is available to the unit for proper operation. The 54,000 DEPMED and 18,000 trailer mounted A/C's are designed to be stationary ground units with cool air supplied to shelters by ducts.

4.3 Reduction in air flow. A reduction in the unit's rated air flow and cooling performance can be expected should the static pressure, as specified on item 16 of the figures, be exceeded by the installation of external ducts, filters, registers, or other devices which restrict the flow of air to and from the A/C. Air flow and cooling capacity for the 54,000 DEPMED and 18,000 trailer mounted A/C are rated with ducts installed.

5. DETAIL REQUIREMENTS

5.1 The standard family of military air conditioners. The standard family consists of 28 units ranging from 6,000 Btuh cooling/4,500 Btuh heating to 60,000 Btuh cooling/47,000 Btuh heating. These units are arranged by this standard into six categories: compact vertical, compact horizontal, split-package, MPI's, 18,000 trailer mount, and the 54,000 DEPMED. All units cool, dehumidify and heat. The heating capacity was designed so that the power demand in the heating mode approximates that of the cooling mode.

5.1.1 Compact air conditioners. The compact air conditioners are intended to satisfy the majority of requirements of the Field Army. They are designed for minimum size and weight, standardization of components, minimum power requirement, a tolerance of variations in power supply, and maximum reliability and maintainability consistent with their relatively small interior volume. Their features include:

- a. Rugged construction and able to withstand high levels of shock and vibration.
- b. Automatically controlled heating as well as cooling.
- c. Compatibility with collective protection systems.
- d. Fresh air ventilation with or without cooling or heating.
- e. Self-protection against abnormal temperatures.
- f. Self-protection against cutoff of condenser air flow.

MIL-STD-1408B

- g. Compatibility with sensitive electronic systems. A hot gas bypass control system enables precise air conditioning without cyclic disturbance of the external power supply circuit.
- h. The MPI units are equipped with soft start capabilities eliminating the need for a hot gas bypass control system.

5.1.2 Compact vertical air conditioners. The vertical air conditioners have their maximum dimension in the vertical direction for applications where available space and the specific cooling requirement dictate a relatively narrow, tall unit. There are five vertical units with a total of twelve different electrical models or classes; these are depicted in figure 1.

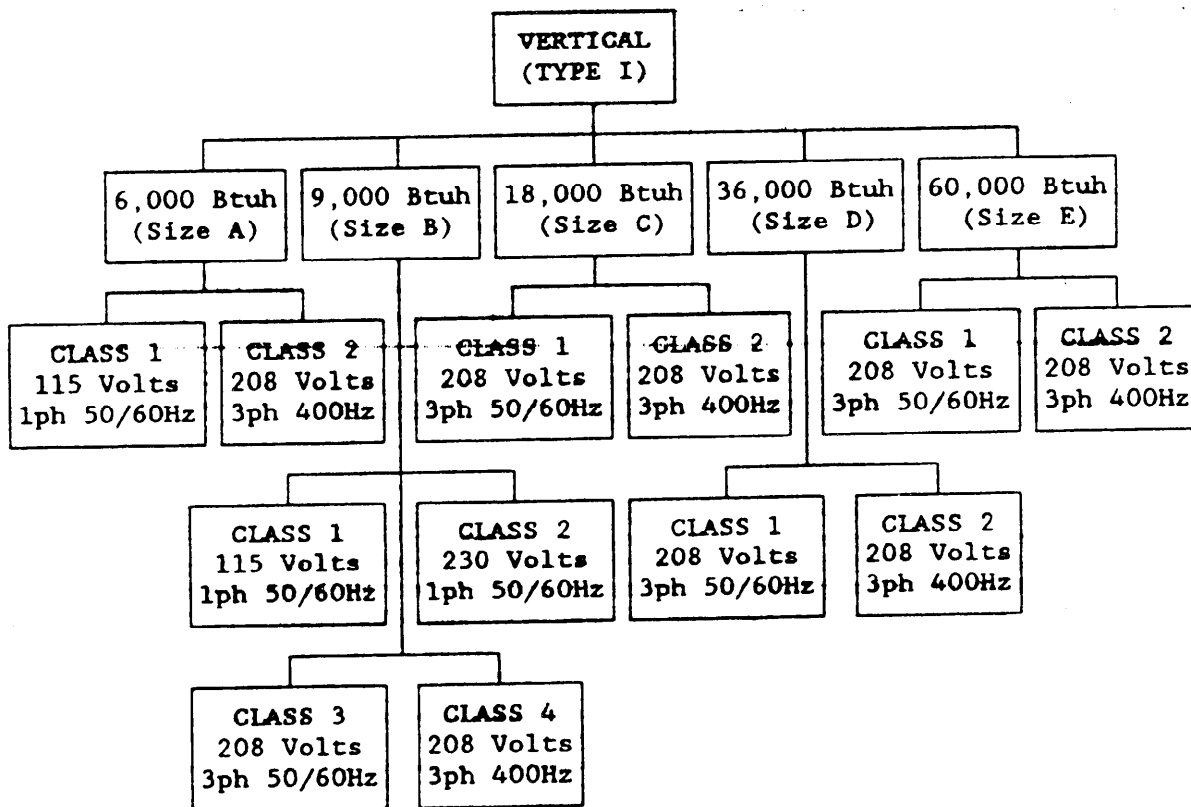

Figure 1. Compact vertical air conditioners.

MIL-STD-1408B

5.1.3 Compact horizontal air conditioners. The horizontal units are designed with their maximum dimension in the horizontal direction. There are three horizontal sizes with nine classes, as shown in figure 2.

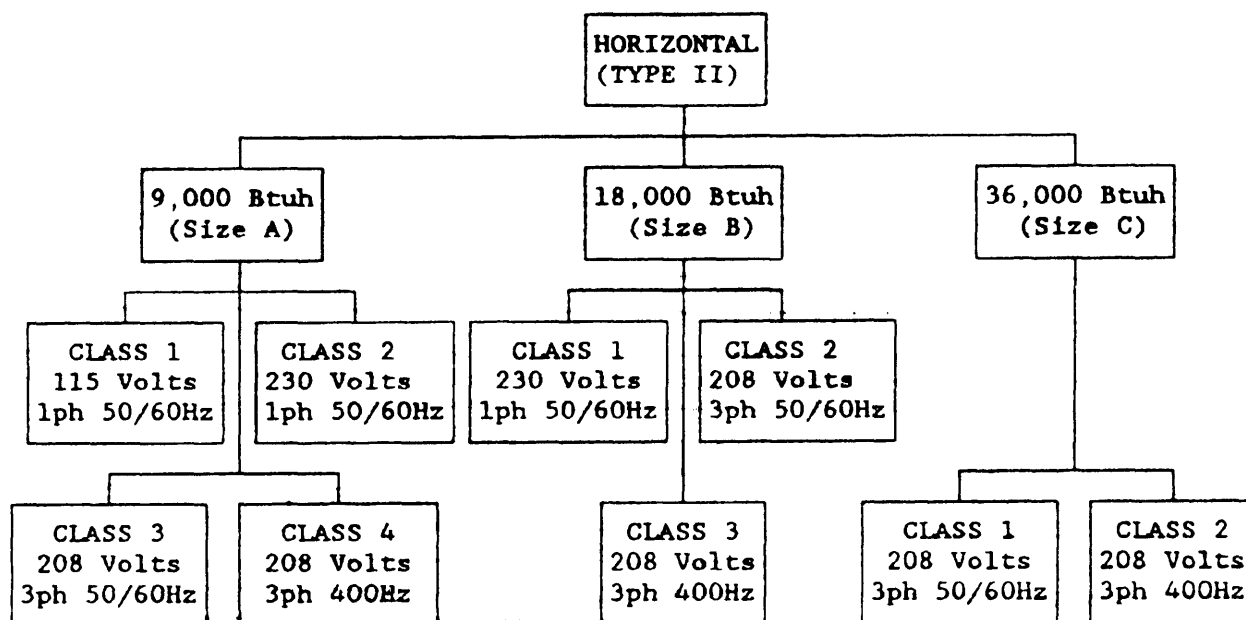

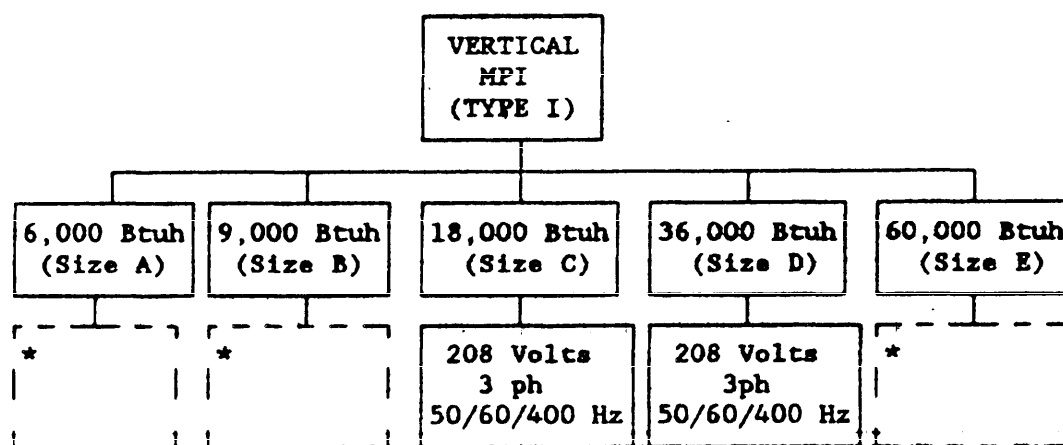

Figure 2. Compact horizontal air conditioners.

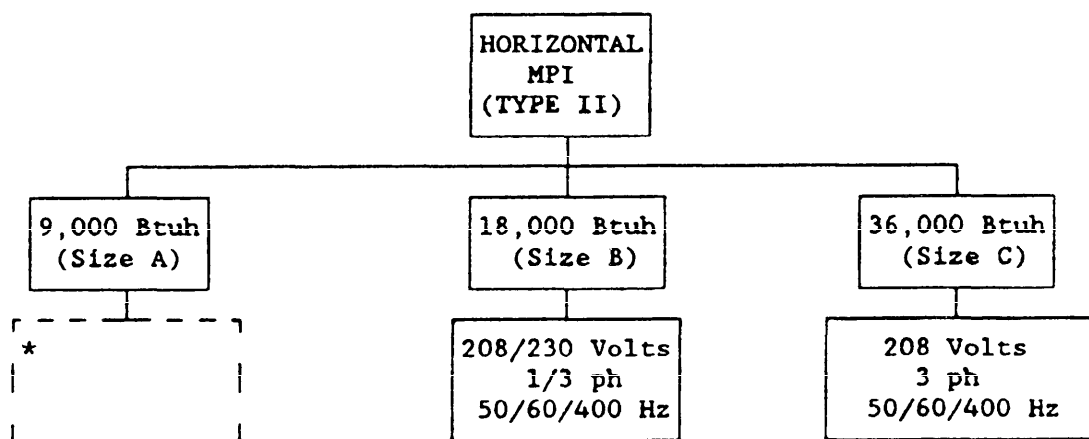

5.1.4 Split-package air conditioner. The split package unit is a single 18,000 Btuh air conditioner that is constructed in two parts: an evaporator section and a condenser section. This design permits the user to configure the package vertically or horizontally or with the condenser section operating remotely from the evaporator, for example, on the outside of a wall. The split package unit has the operational features of the compact air conditioners although it is approximately one-third larger and one-third heavier than the equivalent compact units. The split package unit is designed with protection against EMP.

5.1.5 MPI air conditioners. The MPI units are constructed following the vertical and horizontal units design and application. These units are capable of operating on multiple power inputs, subsequently the name, MPI. There are two vertical units and two horizontal units with power characteristics as shown in figures 3 and 4.

MIL-STD-1408B

Figure 3. Vertical multiple power input air conditioner.

* Future development planned.

* Future development planned.

Figure 4. Horizontal multiple power input air conditioners.

MIL-STD-1408B

5.1.6 Trailer mounted 18,000 Btuh A/C. The self-contained mobile trailer mounted 18,000 Btuh A/C consists of a single horizontal compact 18,000 Btuh air conditioner and a single 10 kW diesel generator unit, both mounted onto a 3/4-ton single axle trailer. The conditioned air is supplied to shelters by two 12-foot-long by 12-inches diameter ducts, supply and return.

5.1.7 Deployable medical system (DEPMED) A/C. The DEPMEDS unit is a horizontal, duct type, 54,000 Btuh air conditioner that has a base mount design. This means that the unit, as opposed to mounting directly on the shelter, would sit on the ground beside the shelter. The conditioned air is supplied to the shelter by two 15-inch diameter flexible ducts, supply and return.

5.1.8 Detailed drawings. Figures 5 through 19 contain general application characteristics for each type of unit: Figures 5 through 7 for horizontal compact units; figures 8 through 12 for vertical compact units; figure 13 for the split-package unit; figures 14 through 17 for MPI units; figure 18 for the trailer mounted 18,000 Btuh unit; and figure 19 for the DEPMED unit. Consult applicable military specification for complete dimensions and installation data.

5.2 Method of reference. Reference to models should include the military specification, type, size, and classes of the desired air conditioner; this information may be found on the figures provided herein.

6. NOTES

(This section contains information of a general or explanatory nature that may be helpful, but is not mandatory.)

6.1 Intended use. This standard is intended for use in selecting air conditioning units to meet a defined need.

6.2 Subject term (key word) listing.

Compact, horizontal
Compact, vertical
Compact unit
Multipower
Split-package
Trailer mounted
6,000 Btuh
9,000 Btuh
18,000 Btuh
36,000 Btuh
60,000 Btuh

6.3 Changes from previous issue. Marginal notations are not used in this revision to identify changes with respect to the previous issue due to the extensiveness of the changes.

STANDARDIZATION DOCUMENT IMPROVEMENT PROPOSAL

INSTRUCTIONS

1. The preparing activity must complete blocks 1, 2, 3, and 8. In block 1, both the document number and revision letter should be given.
2. The submitter of this form must complete blocks 4, 5, 6, and 7.
3. The preparing activity must provide a reply within 30 days from receipt of the form.

NOTE: This form may not be used to request copies of documents, nor to request waivers, or clarification of requirements on current contracts. Comments submitted on this form do not constitute or imply authorization to waive any portion of the referenced document(s) or to amend contractual requirements.

RECOMMEND A CHANGE:

1. DOCUMENT NUMBER
MIL-STD-14068

2. DOCUMENT DATE (YYMMDD)
920305

3. DOCUMENT TITLE

Air Conditioners, Standard Family of Military Air Conditioners, General Application Characteristics

4. NATURE OF CHANGE (Identify paragraph number and include proposed rewrite, if possible. Attach extra sheets as needed.)

REASON FOR RECOMMENDATION

6. SUBMITTER
