## 5. DETAILED REQUIREMENTS

5.1 Dimensions. Dimensions shall be in accordance with the applicable section of this standard and the following dimensional data:

- a. Dimensioning and tolerancing in accordance with ASME Y14.5. Dimensions are true position (TP) and in inches.
- b. Metric equivalents (to the nearest .02 mm) are given for information only and are based upon 1 inch = 25.4 mm.
- c. Dimensions and markings for insert arrangements are shown for engaging face of socket insert; pin insert is opposite.
- d. The following tolerances apply to an insert installed in the connector shell:
  1. Center of each hole in the insert shall be located at true position within .014 inches (0.356 mm) diameter.  $\oplus$  .014 DIA
  2. Center of engaging end of each contact shall be located at true position within .024 inches (0.610 mm) diameter.  $\oplus$  .024 DIA
- e. Unless otherwise indicated, dimensions are symmetrical about centerline (CL or  $\text{CL}$  ).
- f. An arrow  $\downarrow$  indicates the centerline of the insert arrangement.

5.2 Polarization (see figure 1).

- a. Each insert arrangement is shown in the "normal position" in the shell.
- b. In the normal position (N), the indexing radius coincides with the CL of the master key or keyway of the shell.
- c. For alternate polarization positions 1, 2, 3, 4 and 5, the socket insert is rotated clockwise relative to the centerline of the master key or keyway of the shell.
- d. For alternate polarization positions 1, 2, 3, 4 and 5, the pin insert is rotated counter-clockwise relative to the centerline of the master key or keyway of the shell.
- e. For alternate polarization positions 6, 7, 8, 9 and Y, the insert is in normal and the minor keys or keyways are relocated as indicated on figure 1 with reference to the master key or keyway.
- f. Four keys or keyways (maximum material condition (MMC)) and insert shall be located within .004 inches (0.102 mm) either side of true position (TP) relative to master key or keyway (MMC) and shell outside diameter (OD) or inside diameter (ID) (MMC).
- g. Alternate insert positions 1, 2, 3, 4 and 5 are for intermateability use only.  
NOT RECOMMENDED FOR NEW DESIGN.

5.3 Contacts. Solder contacts shall be in accordance with MIL-DTL-83723 or MIL-DTL-26500. Crimp contacts shall be in accordance with the applicable SAE-AS39029 specification sheet specified in table I or table II.

6.4 Drawing notes. The following information is applicable to all figures depicted in this standard.

- a. Dimensions are in inches. Metric equivalents are given for information only.
- b. Insert arrangements are shown using a conventional two-dimensional Cartesian system with two perpendicular axes. The x-axis is always the horizontal centerline, and the y-axis is always the vertical centerline. The origin, or "0,0" point, is always the intersection of the two axes. The axes in each insert arrangement follow the standard, two-dimensional, "positive" orientation, with the positive x-axis pointed to the right and the positive y-axis pointed up, as illustrated in the figure below:

6.5 Changes from previous issue. The margins of this standard are marked with vertical lines to indicate where changes from the previous issue were made. This was done as a convenience only and the Government assumes no liability whatsoever for any inaccuracies in these notations. Bidders and contractors are cautioned to evaluate the requirements of this document based on the entire content irrespective of the marginal notations and relationship to the previous issue.
