AIRCRAFT/STORES CERTIFICATION PROCEDURES

MIL-STD-1763A

1. **This Military Standard is approved for use by all Departments and Agencies of the Department of Defense.**
2. Beneficial comments (recommendations, additions, deletions) and any pertinent data which may be of use in improving this document should be addressed to: ASD/SK, Eglin AFB, Florida 32542-5000, by using the Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document, or by letter.

MIL-STD-1763A

6. NOTES

(This section contains information of a general or explanatory nature that may be helpful, but is not mandatory.)

6.1 Intended Use. This standard is intended to provide information and the methods used to obtain the data to establish that sufficient compatibility exists between an aircraft, specific stores, and suspension equipment to justify certification of the stores for use on that aircraft. By this standardization, responsible agencies may then be assured that a test run by any agency will still provide the same data between agencies and eliminating the duplication of tests. This standard purposely does not address the following:

- a. Certain aspects of the safety testing of munitions, such as insensitive munitions, rough handling, storage, accelerated aging, or transportation tests.
- b. Tests of the basic materials or piece parts, such as transistors, and integrated circuits.
- c. Munition effectiveness.

6.2 Tailoring Guidance. This document attempts to define all the tests which might ever be required to certify a store, and provides standard test methodology, test instrumentation, and data to be obtained from each test. Due to the number of separate compatibility situations which must be considered no single procedure or test method can be used in every case. It is up to the cognizant test approval authority or certifying agency to select and/or tailor the specific methods appropriate for each particular store certification situation.

6.3 International standardization agreements. Certain provisions of this document are the subject of international standardization agreements. When change notice, revision, or cancellation of the document is proposed which will affect or violate the international agreement concerned, the preparing activity shall take appropriate reconciliation action through international standardization channels, including departmental standardization offices to change the agreement or make other appropriate accommodations. Applicable international organizations are:

- a. North Atlantic Treaty Organization (NATO)
- b. Air Standardization Coordinating Committee (ASCC)

6.4 Changes from Previous Issue. Marginal notations are not used in this revision to identify changes with respect to previous issue due to the extensiveness of the changes. Individual test procedure numbering has been rationalized in this issue and those tests that have received extensive updates have had their number annotated with the alphanumeric revision number applicable.
