MIL-STD-2361D PRODUCTION XML DTD V4.10
Attribute Type Definitions

%audio.class;   *Defined Audio Types*

A predefined list containing common audio formats. The list can be updated to include other audio types.

ELEMENT USED IN: *%notation.class;*

ATTRIBUTE TYPE DEFINITION
  DECLARED VALUE: List (WMA | WAX | WAV | MID | MIDI | RMI | SMF | KAR | AIF | AIFC | AIFF | CDDA | AU | SND |ULW | CDA)

%graphic.class;   *Defined Notation Graphic Types*

A predefined list containing common graphical formats. The list can be updated to include other graphic types.

ELEMENT USED IN: *%notation.class;*

ATTRIBUTE TYPE DEFINITION
  DECLARED VALUE: List (BMP| CGM-CHAR | CGM-BINARY | CGM-CLEAR | DITROFF | DVI | EPS | EQN | FAX | GIF | GIF87a | GIF89a | JPG | JPEG | IGES | PCX | PDF | PIC | PNG | PS | SGML | TBL | TEX | TIFF | WMF | WPG | linespecific)

%maintlevel;   *Lowest Maintenance Level – **Attribute Type***

List of available maintenance level for a TM. The levels are Crew, Maintainer, Below-Depot, Aviation Support Battalion (ASB), Aviation Maintenance Company (AMC), Theater Aviation Sustainment Maintenance Group (TASMG), Depot (depot).

ELEMENT USED IN: *<titlepg>, and %wplevel;*

ATTRIBUTE TYPE DEFINITION
  DECLARED VALUE: List (crew | maintainer | below_depot | asb | amc | tasmg | depot)

%mp3.class;   *Defined Notation MP3 Types*

A predefined list containing common MP3 formats. The list can be updated to include other MP3 types.

ELEMENT USED IN: *%notation.class;*

ATTRIBUTE TYPE DEFINITION
  DECLARED VALUE: List (MP3 | M3U | SWA | M3URL)

%mpeg.class;   *Defined Notation MPEG Types*

A predefined list containing common MPEG formats. The list can be updated to include other MPEG types.

ELEMENT USED IN: *%notation.class;*

ATTRIBUTE TYPE DEFINITION
  DECLARED VALUE: List (MPEG | MPG | MPE | MLV | MP2 | MP2V | MPA | MP4 | MPG4)

MIL-STD-2361D PRODUCTION XML DTD V4.10
Attribute Type Definitions

%no_att;   *Yes or No with Default No – **Attribute Type***

Provide a "yes" or "no" value list with no attribute entered by the user is defaulted to "no".

ELEMENT USED IN: *<ammo>, <dialog-group>, <entry>, <figure>, <link>, <nostate>, <note>, <note.group>, <paper.manual>, <pi.item>, <pmcstable>, <randlist>, <servbranch>, <sys-ts>, <warning>, <warning.group>, and <yesstate>*

ATTRIBUTE TYPE DEFINITION
    DECLARED VALUE: "yes" or "no"
    DEFAULT VALUE =   no

%notation.class;   *Defined Notation Types*

A predefined list containing common graphic, audio and multimedia formats.

ELEMENT USED IN: *%notation.class;*
ATTRIBUTE TYPE DEFINITION
    DECLARED VALUE: List (MPEG | MPG | MPE | MLV | MP2 | MP2V | MPA | MP4 | MPG4)

%referencetype;   *Link Reference Type – **Attribute Type***

Define the link element information type being targeted. The link types are Technical Manual (tm), Supply Catalog (sc), Work Package (wp), Test Procedure (test), Task (task), Step Level 1 (step1), Paragraph (paragraph), Figure (figure), Table (table), Part Item (part), External Document (document), Initial Setup Item (setup.item), IETM or Help Frame (frame.help), Application Program (program), Multimedia (multimedia), Hotspot (hotspot), and Page Number (pageno).

ELEMENT USED IN: *<link>*
ATTRIBUTE TYPE DEFINITION
    DECLARED VALUE: List (tm | sc | wp | test | task | step1 | paragraph | figure | table | part | document | setup.item | frame.help | program | multimedia | hotspot | pageno)

%variablescope;   *State (Variable) Information Scope – **Attribute Type***

The state (variable) information data is kept within a local scope (i.e. only validate within a work package) or global is effective for the entire IETM.

ELEMENT USED IN: *<variable>*
ATTRIBUTE TYPE DEFINITION
    DECLARED VALUE: List (local | global)

%video.class;   *Defined Video Types*

A predefined list containing common video formats. The list can be updated to include other video types.

ELEMENT USED IN: *%notation.class;*

MIL-STD-2361D PRODUCTION XML DTD V4.10
Attribute Type Definitions

ATTRIBUTE TYPE DEFINITION
    DECLARED VALUE: List (ASR | ASX | WM | WMX | WMP | WMV | WVX | AVI | MOV | QT | SMI | SML | VFW | FLI)

%yes_att;   *Yes or No with Default Yes – **Attribute Type***

Provide a "yes" or "no" value list with no attribute entered by the user is defaulted to "yes".

ELEMENT USED IN: *<binarymenu>, <dialog>, <fillin>, <howtouse>, <internet>, and <menu>*

ATTRIBUTE TYPE DEFINITION
    DECLARED VALUE: "yes" or "no"

    DEFAULT VALUE =   yes

%yesorno;   *Yes or No without Default – **Attribute Type***

Provide a "yes" or "no" value list with no required value or default.

ELEMENT USED IN: *<binarymenu>, <choice>, <dialog>, <ecp>, <message>, <step1>, <step2>, <step3>, <step4>, <step5>, <step6>, and <variable>*

G

%graphicatt; *Graphic – **Attribute Set***

Attributes in this set supply common graphical properties
necessary to present the image.

ELEMENT USED IN: *<authent>, <graphic>, <icon-set>, <inlinegraphic>, and <symbol>*

REQUIRED ATTRIBUTE(S)

boardno The entity name containing the reproducible graphics, such
as the metric conversion chart.
    DECLARED VALUE: Pointer

OPTIONAL ATTRIBUTE(S)

reprodep Specifies the illustration depth or length.
    DECLARED VALUE: Any character

reprowid Specifies the illustration width.
    DECLARED VALUE: Any character

hscale Specifies the horizontal scaling factor for scaling the graphic;
not used if "scalefit='yes'".
    DECLARED VALUE: Any character

vscale Specifies the vertical scaling factor for scaling the graphic;
not used if "scalefit='yes'".
    DECLARED VALUE: Any character

scalefit Specifies that the graphic is to be scaled as needed to fit the
size of the reproduction area.
    DECLARED VALUE: "yes" or "no"

alt Narrative to identify the graphic.
    DECLARED VALUE: Any character

%graphicunit; Any of the attributes in the associated attribute set may be used with this
element. Refer to graphicunit for a complete description.

%graphicunit; *Graphic Unit of Measure – **Attribute Set***

Defines what measurement units were used for the graphic dimension.

ELEMENT USED IN: *%graphicatt;, <back>, <map.circle>, and <map.coord>*

OPTIONAL ATTRIBUTE(S)

unitmeasure Defines the graphic dimensions unit of measure.
    DECLARED VALUE: List (Millimeter (mm), Centimeter (cm), Pixel (px), Inch
(in), Point (pt), Pica (pi))

    DEFAULT VALUE = in

MIL-STD-2361D PRODUCTION XML DTD V4.10
Attribute Entity Definitions
H

%hcpesd;   *Nuclear Hardness and Electrostatic Discharge Markings – **Attribute Set***

Marking attributes which specify a task or steps in a procedure relates to establishing nuclear hardness or could damage electrostatic discharge sensitive parts.

ELEMENT USED IN: *%taskatt;, <flyable>, <formchart>, <intermediate>, <para>, <para0>, <pmcsproc>, <pmcsstep1>, <pmcsstep2>, <pmcsstep3>, <pmcsstep4>, <proc>, <short>, <specpara>, <step1>, <step2>, <step3>, <step4>, <step5>, <step6>, <subpara1>, <subpara2>, <subpara3>, <subpara4>, and <trim.para>*

OPTIONAL ATTRIBUTE(S)

hcp   Marks the task or a step in a procedure relating or contributing to establishing nuclear hardness.

    DECLARED VALUE: "yes" or "no"

    DEFAULT VALUE =   no

esd   Marks a task or a step in a procedure relating to handling or maintenance actions which could damage electrostatic sensitive parts.

    DECLARED VALUE: "yes" or "no"

    DEFAULT VALUE =   no

MIL-STD-2361D PRODUCTION XML DTD V4.10
Attribute Entity Definitions
I

%idrefs; *References with ID – **Attribute Set***

Attributes in this set supply identifiers for the current element and references to other element's identifiers.

ELEMENT USED IN: *%bodyidatt;, <contententry>, <indexentry>, <pageno>, and <rear>*

OPTIONAL ATTRIBUTE(S)

id An identifier of the element which is assigned at origination and which remains unchanged as the document is revised or updated even though the automatically assigned enumeration or manually-assigned "labels" change (in some cases many times). The value of the "id" is used when making references to the element from other portions of the document. If no ID is given, none will be maintained and the element can then not be cross-referenced by means of an IDREF on another element or with local linking element.

DECLARED VALUE: ID

idref References one or more identifiers; the use of this attribute must be specified in the style sheet as it has no implied or default use.

DECLARED VALUE: ID Reference (one or more)

assocfig A reference to a figure or figures associated with the current element; generally best applicable to text elements.

DECLARED VALUE: ID Reference (one or more)

%imatt; *Information Module Resource Values – **Attribute Set***

These attributes specify format and content characteristics that apply to the information module as a whole. The attributes are not inherited from one IM to another; however, the attributes at the IM level override the same attributes at the TM level.

ELEMENT USED IN: *<baim>, <bim>, <brim>, <dim>, <gim>, <mim>, <opim>, <pim>, <sim>, and <tim>*

OPTIONAL ATTRIBUTE(S)

chap-toc Specifies whether the chapter includes a table of chapter contents on the chapter title page; the style sheet for the Information Module specifies what contents are extracted to this TOC. A yes value indicates that a TOC should be extracted and printed.

DECLARED VALUE: "yes" or "no"

DEFAULT VALUE = yes

revno IM revision number.

DECLARED VALUE: Any character

frame Indicates to the IETM system the authors intended Frame break.

DECLARED VALUE: "yes" or "no"

DEFAULT VALUE = yes

<servbranch>, <stitle>, <subject>, <sys-ts>, <sysnomen>, <table-alt>,
<tminfono>, <tmno>, <tmtitle>, <wpno>, and <xref>

OPTIONAL ATTRIBUTE(S)

security   Element security level.
  DECLARED VALUE: List (Unclassified (uc), FOUO (fouo), Confindental (c), Se-
cret (s), and Top Secret (ts))

%setupatt;   *Initial Setup –* ***Attribute Set***

Defines a ID for each initial setup item. The concept is to use only the
data identified in setup and cross-reference to the initial setup for the
value. This is to increase reusability when a work package is shared
with multiple systems. When using a work package in different weapon
system exchange the initial setup data for the weapon system, but
maintaining the same identifiers from the previous system.

ELEMENT USED IN: *<dwgreq-setup-item>, <eqpconds-setup-item>, <mtrlpart-setup-item>,*
<persnreq-setup-item>, <ref-setup-item>, <specenv-setup-item>,
<testeqp-setup-item>, and <tools-setup-item>

OPTIONAL ATTRIBUTE(S)

id   An identifier of the element which is assigned at origination and which
remains unchanged as the document is revised or updated even though the
automatically assigned enumeration or manually-assigned "labels" change (in
some cases many times). The value of the "id" is used when making references
to the element from other portions of the document. If no ID is given, none
will be maintained and the element can then not be cross-referenced by means
of an IDREF on another element or with local linking element.
  DECLARED VALUE: ID

applicable   Reference to the applicable configuration(s) specified in the WP identification
information. When using an IETM that can filter information, this information
is not presented when not applicable to the current configuration. Presentations
that do not filter information, the information will be identified by the assigned
associated abbreviation to designate applicability of the information.
  DECLARED VALUE: ID Reference (one or more)

MIL-STD-2361D PRODUCTION XML DTD V4.10
Attribute Entity Definitions
S

%changelevel;	Any of the attributes in the associated attribute set may be used with this element. Refer to changelevel for a complete description.

%stdinfoatt; *Standard Information – **Attribute Set***

Defines common attributes associated to standard information. MIL-STD-40051-1A and MIL-STD-40051-2A states for TOC page-base TMs, the table number and title listed directly below the work package title, so the "tocentry" attribute number should be 1 less the associated work package TOC indenture level.

ELEMENT USED IN: *<aindx>, <crit.insp.tab>, <ctrlindtab>, <defect.tab>, <foldsect>, <glossary>, <howtouse>, <mobiltab>, <mrpl>, <oiptab>, <orsch.tab>, <pecul.insp.tab>, <pmcstable>, <pmi.pecul.tab>, <pshopchk.tab>, <table>, <tsindx.messageword>, <tsindx.symptom>, <tsindx.system>, and <warnsum>*

OPTIONAL ATTRIBUTE(S)

applicable Reference to the applicable configuration(s) specified in the WP identification information. When using an IETM that can filter information, this information is not presented when not applicable to the current configuration. Presentations that do not filter information, the information will be identified by the assigned associated abbreviation to designate applicability of the information.

DECLARED VALUE: ID Reference (one or more)

%bodyidatt; Any of the attributes in the associated attribute set may be used with this element. Refer to bodyidatt for a complete description.

tocentry Defines the indenture level in the TOC. When the level is zero, no entry in the TOC is used.

%taskatt;   *Task – Attribute Set*

Defines common attributes for all tasks.

ELEMENT USED IN: *<adjust>, <align>, <alignproc>, <ammo.defect>, <arm>, <assem>, <calibration>, <chkeqp>, <clean>, <cover>, <decon>, <degraded>, <disassem>, <disconnect>, <ecm>, <emergency>, <extconn>, <extpwr>, <followon.maintsk>, <fording>, <hoist>, <hookup>, <initial>, <inspect>, <install>, <jack>, <load>, <lube>, <mark>, <moor>, <ndi>, <op_steps>, <oper>, <operaux>, <orsch>, <other.maintsk>, <other.surtsk>, <overhaul>, <pack>, <paint>, <park>, <pis>, <precal>, <prechkadj>, <prepforuse>, <prepmove>, <preserv>, <processeqp>, <pss>, <rebuild>, <remove>, <repair>, <replace>, <ris>, <secref>, <service>, <setconn>, <shelter>, <shltr>, <site>, <siting>, <sling>, <softwaremaint>, <test>, <tow>, <unload>, <unpack>, and <unusualenv>*

OPTIONAL ATTRIBUTE(S)

%hcpesd;   Any of the attributes in the associated attribute set may be used with this element. Refer to hcpesd for a complete description.

frame   Indicates to the IETM system the authors intended Frame break.
  DECLARED VALUE: "yes" or "no"
  DEFAULT VALUE =   yes

tocentry   Defines the indenture level in the TOC. When the level is zero, no entry in the TOC is used.
  DECLARED VALUE: List (0, 3, 4, 5)
  DEFAULT VALUE =   0

date-time-stamp   How should the work package stamp be tracked for completion as time only, date only or time and date.
  DECLARED VALUE: List (date, time, date-time)

%applidatt;   Any of the attributes in the associated attribute set may be used with this element. Refer to applidatt for a complete description.

%tracking_att;   *Tracking – Attribute Set*

Identifies work package information about the work package for tracking usage and change levels. Identify the WP functional group code and LSA identifier. Identify, page-base only, if the WP is inserted between existing WP in a TM through a point WP sequence number, or if the WP is deleted in the TM (to maintain the correct WP sequence number for auto-generated numbers).

ELEMENT USED IN: *%wpatt;*
OPTIONAL ATTRIBUTE(S)

fgc   Specifies the functional group code that applies to the subject of the element.
  DECLARED VALUE: Any character

MIL-STD-2361D PRODUCTION XML DTD V4.10
Attribute Entity Definitions
T

lsa-id	Specifies the identification of the subject of the element in logistic support analysis applying to the equipment covered in the TM.
DECLARED VALUE:	Any character
wpseq	Identifies the work package sequence number in a paper composition system. The attribute is not used and ignored in a frame-base/IETM.
DECLARED VALUE:	Any character
insertwp	Specifies the work packages is being inserted into a revision. The insertwp attribute specifies the point WP number for paper. The work package must be added after the last inserted work package or between two existing work packages in a revision. After a revision is completed, the attribute is cleared and is re-sequenced in the correct order.
DECLARED VALUE:	Any character
deletewp	Specifies a work package is deleted from the current revision. Needed to keep placeholder for page-based work package sequence numbering. After a revision is completed, the work package is deleted from the assembly.
DECLARED VALUE:	"yes" or "no"
DEFAULT VALUE =	no

%wpatt; *Work Package – **Attribute List***

Common attributes that defines the work package through WP identification number, crew members needed, frame indicator, only applicable for selected service(s), and change tracking.

ELEMENT USED IN: *<aalwp>, <ammo.markingwp>, <ammowp>, <auxeqpwp>, <bdar-geninfowp>, <bdartoolswp>, <bulk_itemswp>, <coeibiiwp>, <compchklistwp>, <csi.wp>, <ctrlindwp>, <damage-assesswp>, <descwp>, <destruct-introwp>, <destruct-materialwp>, <diagnosticwp>, <dmwr_introwp>, <dmwr_operationalreqwp>, <dmwr_qarwp>, <emergencywp>, <eqploadwp>, <explistwp>, <facilwp>, <gen.maintwp>, <genrepairwp>, <genwp>, <ginfowp>, <introwp>, <inventorywp>, <kitswp>, <lubewp>, <macintrowp>, <macwp>, <maintwp>, <manu_items_introwp>, <manuwp>, <mobilwp>, <mrplwp>, <natowp>, <nsnindxwp>, <oipwp>, <opcheck-tswp>, <opcheckwp>, <opunuwp>, <opusualwp>, <orschwp>, <perseqpwp>, <plwp>, <pm-ginfowp>, <pmcsintrowp>, <pmcswp>, <pmi-cklistwp>, <pmiwp>, <pms-ginfowp>, <pms-inspecwp>, <pnindxwp>, <pshopanalwp>, <qawp>, <refdesindxwp>, <refwp>, <stl_partswp>, <stlwp>, <storagewp>, <stowagewp>, <substitute-matwp>, <supitemwp>, <surwp>, <techdescwp>, <thrywp>, <toolidwp>, <torquewp>, <tsindxwp>, <tsintrowp>, <tswp>, <wiringwp>, and <wtloadwp>*

REQUIRED ATTRIBUTE(S)

wpno Work package unique identification number IAW MIL-STD-40051-1A and MIL-STD-40051-2A.
DECLARED VALUE: ID

OPTIONAL ATTRIBUTE(S)

crewmember The crew member that this information pertains to is specified. This will appear in the table prior to the beginning of the procedure.
DECLARED VALUE: Any character

tocentry Defines the indenture level in the TOC. When the level is zero, no entry in the TOC is used.
DECLARED VALUE: List (2, 3, 4, 5)

date-time-stamp How should the work package stamp be tracked for completion as time only, date only or time and date.
DECLARED VALUE: List (date, time, date-time)

frame Indicates to the IETM system the authors intended Frame break.
DECLARED VALUE: "yes" or "no"
DEFAULT VALUE = yes

%wprsrc-vals; Any of the attributes in the associated attribute set may be used with this element. Refer to wprsrc-vals for a complete description.

MIL-STD-2361D PRODUCTION XML DTD V4.10
Attribute Entity Definitions
W

%tracking;	Any of the attributes in the associated attribute set may be used with this element. Refer to tracking for a complete description.
%bodyatt;	Any of the attributes in the associated attribute set may be used with this element. Refer to bodyatt for a complete description.

%wplevel;   *Work Package Lowest Maintenance Level – Attribute Set*

Defines the available maintenance levels for a work package.

ELEMENT USED IN: *<maintlvl>*

REQUIRED ATTRIBUTE(S)

level   The lowest maintenance level allowed to use the work package.
DECLARED VALUE: List (%maintlevel;)

%wprsrc-vals;   *Service Only Work Package – Attribute Set*

These attributes are used to specify if the work package is specifically only for one or more services in a joint publications. If all the services designated for the TM all attributes remain at the default state of "no".

ELEMENT USED IN: *%wpatt;*

OPTIONAL ATTRIBUTE(S)

army   United States Army.
DECLARED VALUE: "yes" or "no"

DEFAULT VALUE =   no

airforce   United States Air Force.
DECLARED VALUE: "yes" or "no"

DEFAULT VALUE =   no

navy   United States Navy.
DECLARED VALUE: "yes" or "no"

DEFAULT VALUE =   no

marines   United States Marine Corps
DECLARED VALUE: "yes" or "no"

DEFAULT VALUE =   no

%data;   *Linking Data Building Block –* ***Element Set***

Additional referencing building block elements needed for other elements.

ELEMENT USED IN: *<accept>, <change>, <condition>, <ctrlind>, <eqpitem>, <name>, and %text_ent;*

CONTENT MODEL IS: *%linkdata; | callout | ftnote | ftnref*

%diagnostic-test_ent;   *Diagnostic Test*

Defines the available diagnostic functions to perform.

ELEMENT USED IN: *<testwithstate>*

CONTENT MODEL IS: *comp-locator | diagnostic_initial | diagnostic_initial-alt | diagnostic_group | interaction*

%dialog_ent;   *Dialog Box (Conditional) –* ***Element Set***

Defines that either a non-conditional or conditional dialogs. A conditional element must resolve to only none or one condition (using state information variable) is true.

ELEMENT USED IN: *<interaction>, <loopaction>, and <variable>*

CONTENT MODEL IS: *dialog | dialog-alt*

%disconnect_ent;   *Test Equipment Disconnection (Conditional) –* ***Element Set***

Defines that either a non-conditional or conditional test equipment disconnection procedures. A conditional element must resolve to only none or one condition (using state information variable) is true.

ELEMENT USED IN: *<resultwithoutstate>, and <resultwithstate>*

CONTENT MODEL IS: *disconnect | disconnect-alt+*

H

%hookup_ent;   *Test Equipment Hookup (Conditional) – **Element Set***

Defines that either a non-conditional or conditional test equipment hookup procedures. A conditional element must resolve to only none or one condition (using state information variable) is true.

ELEMENT USED IN: *<testwithstate>*

CONTENT MODEL IS: *hookup* | *hookup-alt*+

MIL-STD-2361D PRODUCTION XML DTD V4.10
Element Entity Definitions
L

%linkdata;   *Reference Building Block – **Element Sets***

The element contains entities for formatting and referencing elements, and specialized referencing elements.

ELEMENT USED IN: *<ftnpara>, and %data;*

CONTENT MODEL IS: *%format; | %linkref; | help.info | indxref | term | term.def*

%linkref;   *Linking Reference – **Element Set***

Defines common internal or external TM referencing elements. The *<link>* element provides greater IETM functionality, then the elements *<xref>* or *<extref>*.

ELEMENT USED IN: *<dwgname>, <itemref>, <refdes>, <ref-setup-item>, <term>, <text>, <tsindx.messageword-entry>, <tsindx.symptom-entry>, <tsindx.system-entry>, and %linkdata;*

CONTENT MODEL IS: *xref | extref | link*

%list;   *List – **Element Set***

Defines the list types as sequenced (order/number), random (bullet), and definition.

ELEMENT USED IN: *<entry>, <ftnpara>, <indication>, and <para>*

CONTENT MODEL IS: *seqlist | randlist | deflist*

%localref;   *Local Reference – **Element Set***

Define the common internal TM referencing elements. The *<link>* element provides greater IETM functionality, then *<xref>*.

ELEMENT USED IN: *<defect-group>, <faultcode>, <faultproc>, <follow-on>, <help.info>, <messageitem>, and <mobil-entry>*

CONTENT MODEL IS: *xref | link*

ELEMENT USED IN: *<introwp>*

BOILERPLATE TEXT: **"***<title>***INTRODUCTION</title>**

<para0>

*<title>***SCOPE</title>**

*<para>*This parts information (PI) lists and authorizes spares and repair parts; special tools; special test, measurement, and diagnostic equipment (TMDE); and other special support equipment required for performance of (enter maintenance level) maintenance of the (enter item name). It authorizes the requisitioning, issue, and disposition of spares, repair parts, and special tools as indicated by the source, maintenance, and recoverability (SMR) codes.**</para>**

</para0>

<para0>

*<title>***GENERAL</title>**

*<para>*In addition to the Introduction work package, this PI is divided into the following work packages.*<seqlist>*

*<item>*Repair Parts List Work Packages. Work packages containing lists of spare and repair parts authorized for use in the performance of maintenance at the levels determined by the MAC/SMR code. These work packages also include parts which must be removed for replacement of the authorized parts. Parts lists are composed of functional groups in ascending alphanumeric sequence, with the parts in each group listed in ascending figure and item number sequence. Sending units, brackets, filters, and bolts are listed with the component they mount on. Bulk materials are listed by item name in the Bulk Items work package which follows (select the work package the bulk items follow: the last Parts List work package, the Special Tools Repair Parts work package, or Kits) work package. (choose one of the following) Repair parts kits are listed separately in their own functional group and work package OR Repair parts kits are listed at the end of the individual work packages. Repair parts for reparable special tools are also listed in a separate work package. Items listed are shown on the associated illustrations."**</item>**

<item>(Include the text in items 2 through 4 only if the described work package is included in the TM.) Special Tools Repair Parts Work Package.

MIL-STD-2361D PRODUCTION XML DTD V4.10
Text (Boilerplate) Entity Definition
I

This work package lists any spare parts required for the special tools, TMDE, or other support equipment listed in the Special Tools Work Package that are not listed in any other publication.

</item>

<item>Kits work package. This work package lists all repair kits and their component parts.**</item>**

<item>Bulk Items Work Package. This work package lists all items identified as 'bulk' in the parts lists. Due to the nature of bulk items, this work package does not include a figure.**</item>**

<item>Special Tools List Work Packages. This work package lists those special tools, special TMDE, and special support equipment authorized by this RPSTL (as indicated by Basis of Issue (BOI) information in the DESCRIPTION AND USABLE ON CODE (UOC) column). Tools that are components of common tool sets and/or Class VII are not listed.**</item>**

<item>Cross-Reference Indexes Work Packages. There are (enter applicable number) cross-reference indexes work packages in this RPSTL: the National Stock Number (NSN) Index work package and or, the Part Number (P/N) Index work package (If reference designator is used enter:, and the Reference Designator Index work package). The National Stock Number Index work package refers you to the figure and item number for each NSN listed in the RPSTL. The Part Number Index work package refers you to the figure and item number for each part number listed in the RPSTL. (If reference designator is used, enter: The Reference Designator Index work package refers you to the figure and item number of each reference designator listed in the RPSTL).**</item></seqlist></para>**

</para0>

<para0>

<title>EXPLANATION OF ENTRIES IN THE REPAIR PARTS LIST AND SPECIAL TOOLS LIST WORK PACKAGES**</title>**

<para> ITEM NO. (Entry 1). Indicates the number used to identify items called out in the illustration.**</para>**

<para> SMR CODE (Entry 2). The SMR code containing supply/requisitioning information, maintenance level authorization criteria, and disposition instruction, as shown in the following breakout. This entry may be subdivided into 4 subentries, one for each service.

BOILERPLATE TEXT: **"**_<title>_INTRODUCTION**</title>**

<para0>

_<title>_SCOPE**</title>**

_<para>_This RPSTL lists the authorized spares and repair parts; special tools; special test, measurement, and diagnostic equipment (TMDE); and other special support equipment required for performance of (enter maintenance level) maintenance of the (enter item name). It authorizes the requisitioning, issue, and disposition of spares, repair parts, and special tools as indicated by the source, maintenance, and recoverability (SMR) codes. **</para>**

</para0>

<para0>

_<title>_GENERAL**</title>**

_<para>_In addition to the Introduction work package, this RPSTL is divided into the following work packages. _<seqlist>_

_<item>_Repair Parts List Work Packages. Work packages containing lists of spare and repair parts authorized for use in the performance of maintenance at the levels determined by the MAC/SMR code. These work packages also include parts which must be removed for replacement of the authorized parts. Parts lists are composed of functional groups in ascending alphanumeric sequence, with the parts in each group listed in ascending figure and item number sequence. Sending units, brackets, filters, and bolts are listed with the component they mount on. Bulk materials are listed by item name in the Bulk Items work package which follows (select the work package the bulk items follow: the last Parts List work package, the Special Tools Repair

MIL-STD-2361D PRODUCTION XML DTD V4.10
Text (Boilerplate) Entity Definition
I

Parts work package, or Kits) work package. (choose one of the following) "Repair parts kits are listed separately in their own functional group and work package OR Repair parts kits are listed at the end of the individual work packages. Repair parts for reparable special tools are also listed in a separate work package. Items listed are shown on the associated illustrations."**</item>**

<item>(Include the text in items 2 through 4 only if the described work package is included in the TM.) "Special Tools Repair Parts Work Package. This work package lists any spare parts required for the special tools, TMDE, or other support equipment listed in the Special Tools Work Package that are not listed in any other publication.**</item>**

*<item>*Kits work package. This work package lists all repair kits and their component parts.**</item>**

*<item>*Bulk Items Work Package. This work package lists all items identified as 'bulk'> in the parts lists. Due to the nature of bulk items, this work package does not include a figure.**</item>**

*<item>*Special Tools List Work Packages. This work package lists those special tools, special TMDE, and special support equipment authorized by this RPSTL (as indicated by Basis of Issue (BOI) information in the DESCRIPTION AND USABLE ON CODE (UOC) column). Tools that are components of common tool sets and/or Class VII are not listed.**</item>**

*<item>*Cross-Reference Indexes Work Packages. There are (enter applicable number) cross-reference indexes work packages in this RPSTL: the National Stock Number (NSN) Index work package and or, the Part Number (P/N) Index work package (If reference designator is used enter:, and the Reference Designator Index work package). The National Stock Number Index work package refers you to the figure and item number for each NSN listed in the RPSTL. The Part Number Index work package refers you to the figure and item number for each part number listed in the RPSTL." (If reference designator is used enter: "The Reference Designator Index work package refers you to the figure and item number of each reference designator listed in the RPSTL). **</item>**

</seqlist></para>

</para0>

<para0>

*<title>*EXPLANATION OF ENTRIES IN THE REPAIR PARTS LIST AND SPECIAL TOOLS LIST WORK PACKAGES **</title>**

*<para>*ITEM NO.(Entry 1). Indicates the number used to identify items called out in the illustration.**</para>**

*<para>*SMR CODE (Entry 2). The SMR code containing supply/requisitioning information, maintenance level authorization criteria, and disposition instruction, as shown in the following breakout. This entry may be subdivided into 4 subentries, one for each service. *<table>*

*<title>*SMR Code Explanation.**</title>**

Indicates the primary number used by the manufacturer (individual, company, firm, corporation, or Government activity), which controls the design and characteristics of the item by means of its engineering drawings, specifications, standards, and inspection requirements to identify an item or range of items. **</para>**

<note>

<trim.para>When you use an NSN to requisition an item, the item you receive may have a different part number from the number listed.**</trim.para>**

</note>

<para>DESCRIPTION AND USABLE ON CODE (UOC) (Column (6)). This column includes the following information:***<seqlist>***

<item>The federal item name, and when required, a minimum description to identify the item.**</item>**

<item>Part numbers of any bulk materials required if the item is to be locally manufactured or fabricated.**</item>**

<item>Hardness Critical Item (HCI). Items that require special handling or procedures to ensure protection against electromagnetic pulse (EMP) damage are marked with the letters 'HCI.'**</item>**

<item>The statement END OF FIGURE appears below the last item description in column (6) for each figure in the repair parts list, special tools repair parts, kits, bulk items, and special tools list work packages. **</item>**

</seqlist></para>

*<para>*QTY (Column (7)). The QTY (quantity per figure) column indicates the quantity of the item used in the breakout shown on the illustration/figure. A "V" appearing in this column instead of a quantity indicates that the quantity is variable and quantity may change from application to application. (MC) Include for Marine Corps manuals only. USMC QTY per Equip (Column (8)). This column indicates the total quantity of the item used on the equipment.**</para>**

</para0>

<para0>

<title> EXPLANATION OF CROSS REFERENCE INDEXES WORK PACKAGES FORMAT AND COLUMNS**</title>**

<para><seqlist>

<item> 1. National Stock Number (NSN) Index Work Package. NSNs in this index are listed in National Item Identification Number (NIIN) sequence.*<randlist>*

<item> STOCK NUMBER Column. This column lists the NSN in NIIN sequence. The NIIN consists of the last nine digits of the NSN. When using this column to locate an item, ignore the first four digits of the NSN. However, the complete NSN should be used when ordering items by stock number.**</item>**

*<item>*For example, if the NSN is 5385-01-574-1476, the NIIN is 01-574-1476.**</item>**

*<item>*FIG. Column. This column lists the number of the figure where the item is identified/located. The figures are in numerical order in the repair parts list and special tools list work packages.**</item>**

*<item>*ITEM Column. This column identifies the item associated with the figure listed in the adjacent FIG. column. This item is also identified by the NSN listed on the same line.**</item>**

</randlist></item>

*<item>*Part Number (P/N) Index Work Package. Part numbers in this index are listed in ascending alphanumeric sequence (vertical arrangement of letter and number combinations which places the first letter or digit of each group in order A through Z, followed by the numbers 0 through 9 and each following letter or digit in like order).*<randlist>*

<item> PART NUMBER Column. This column indicates the part number assigned to the item. **</item>**

*<item>*FIG. Column. This column lists the number of the figure where the item is identified/located in the repair parts list and special tools list work packages.**</item>**

*<item>*ITEM Column. The item number is the number assigned to the item as it appears in the figure referenced in the adjacent figure number column. Include item 3 if reference designator index is used.**</item>**

</randlist></item>

those parts coded "F" in the third position of the SMR code, therefore, there may be a break in the item number sequence.**</para>**

</para0>

<para0>

*<title>*HOW TO LOCATE REPAIR PARTS**</title>**

<para><seqlist>

*<item>*When NSNs or Part Numbers Are Not Known. First. Using the table of contents, determine the assembly group to which the item belongs. This is necessary since figures are prepared for assembly groups and subassembly groups, and lists are divided into the same groups. Second. Find the figure covering the functional group or the subfunctional group to which the item belongs. Third. Identify the item on the figure and note the number(s). Fourth. Look in the repair parts list work packages for the figure and item numbers. The NSNs and part numbers are on the same line as the associated item numbers.**</item>**

*<item>*When NSN Is Known. First. If you have the NSN, look in the STOCK NUMBER column of the NSN index work package. The NSN is arranged in NIIN sequence. Note the figure and item number next to the NSN. Second. Turn to the figure and locate the item number. Verify that the item is the one for which you are looking**</item>**

*<item>*When Part Number Is Known. First. If you have the part number and not the NSN, look in the PART NUMBER column of the part number index work package. Identify the figure and item number. Second. Look up the item on the figure in the applicable repair parts list work package." Include item 4 only if the RPSTL has a reference designator index work package.**</item>**

*<item>*When Reference Designator Is Known. First. If you know the reference designator, look in the REFERENCE DESIGNATOR column of the reference designator index work package. Note the figure and item number. Second. Turn to the figure and locate the item number. Verify that the item is the one for which you are looking.**</item>**

</seqlist></para>

M

(ASB). The ASB performs the following types of maintenance: *<seqlist>*
<item> Off equipment repair of LRUs or other components within the limits prescribed in the MAC.*</item>*
*<item>*Inspections beyond the capability of the AMC.*</item>*
*<item>*BDAR as required. *</item>*
*<item>*Provide support to AMC personnel during peak workload periods as determined by local policy.*</item></seqlist></item></seqlist></item>*
*<item>*Sustainment maintenance*<seqlist>*
<item> Aviation Classification and Repair Activity Depot (AVCRAD). The AVCRAD performs the following: *<seqlist>*
<item> Provides support to CONUS forces*</item>*
*<item>*Provides support to OCONUS deployed forces (as the Theater Aviation Support Maintenance Group (TASMG).*</item>*
*<item>*Expands aviation maintenance capabilities of CONUS depots*</item>*
*<item>*Classifies and inspects aviation stocks and components.*</item>*
*<item>*Performs maintenance actions beyond the scope of the AMC or ASB within the limits prescribed in the MAC.*</item>*
<item> Augments ASB and AMC maintenance tasks.*</item></seqlist> </item>*
</seqlist></item>
*<item>*Depot.*</item></seqlist></para>*
</subpara1><subpara1>
*<title>*Use of the MAC*</title>*
<note>
*<trim.para>*Approved item names are used throughout this MAC. Generic terms/ nomenclature (if any) are expressed in parentheses and are not to be considered as official terminology. *</trim.para>*
</note>
*<para>*The MAC assigns maintenance tasks to the lowest level of maintenance. *</para>*
<subpara2>
*<title>*Maintenance tasks*</title>*
*<para>*Maintenance tasks are limited to and defined as follows:*<seqlist>*
*<item>*Inspect. A function to determine the serviceability of an item by comparing its physical, mechanical, and/or electrical characteristics with established standards through examination (e.g., by sight, sound,

Page – 97

or feel).**</item>**

*<item>*Test. To verify serviceability by measuring the mechanical, pneumatic, hydraulic, or electrical characteristics of an item and comparing those characteristics with prescribed standards, e.g., load testing of lift devices or hydrostatic testing of pressure hoses. **</item>**

*<item>*Service. Operations required periodically to keep an item in proper operating condition; e.g., to clean (includes decontaminate, when required), to preserve, to drain, to paint, or to replenish fuel, lubricants, chemical fluids, or gases. **</item>**

*<item>*Adjust. To maintain or regulate, within prescribed limits, by bringing into proper position, or by setting the operating characteristics to specified parameters. **</item>**

*<item>*Align. To adjust specified variable elements of an item to bring about optimum or desired performance. **</item>**

*<item>*Calibrate. To determine and cause corrections to be made or to be adjusted on instruments of test, measuring, and diagnostic equipment used in precision measurement. It consists of comparisons of two instruments, one of which is a certified standard of known accuracy, to detect and adjust any discrepancy in the accuracy of the instrument being compared.**</item>**

*<item>*Remove. The act of taking a sub component off an asset to allow repair or replacement of that sub-component, or to facilitate other maintenance. **</item>**

*<item>*Install. The act of placing, positioning, or otherwise locating a component or sub-component to make it part of a higher level end item. Install can be to install a new asset for the first time or reinstall an asset previously removed. The maintenance level allowed to perform an installation is determined by the third position in the SMR code. **</item>**

*<item>*Paint. This is a function to prepare and apply coats of paint. When used with munitions, the paint is applied so the ammunition can be identified and protected. **</item>**

*<item>*Replace. To install a serviceable component in its place in place of one that is unserviceable or a required time change asset. "Replace" is authorized by the MAC and the assigned maintenance level is shown as the third position code of the SMR code. **</item>**

MIL-STD-2361D PRODUCTION XML DTD V4.10
Text (Boilerplate) Entity Definition
M

*\<item\>*Repair. The application of maintenance actions, including fault location/troubleshooting, removal, installation, disassembly, assembly, or other maintenance actions to restore serviceability to an item by correcting specific damage, fault, malfunction, or failure in the item. *\<note\>*

*\<trim.para\>*The following definitions are applicable to the "repair" maintenance task: **\</trim.para\>**

\<trim.para\> Fault location/troubleshooting. The process of investigating and detecting the cause of equipment malfunctioning; the act of isolating a fault within a system or Unit Under Test (UUT). Actions. Welding, grinding, riveting, straightening, facing, machining, and/or resurfacing.**\</trim.para\>**

\</note\>\</item\>

*\<item\>*Overhaul. This is the maintenance effort (service/action) prescribed to restore an item to a completely serviceable/operational condition as required by maintenance standards in the appropriate technical publications. Overhaul is normally the highest degree of maintenance performed by the Army. Overhaul does not normally return an item to a like new condition. **\</item\>**

\<item\> Rebuild. This consists of those services/actions necessary for the restoration of unserviceable equipment to a like new condition in accordance with original manufacturing standards. Rebuild is the highest degree of material maintenance applied to Army equipment. The rebuild operation includes the act of returning to zero those age measurements (e.g., hours/miles) considered in classifying Army equipment/components. **\</item\>**

*\<item\>*Lubricate. The act of applying a material (e.g., oil or grease) to reduce friction and allow a component to operate in a more efficient manner. **\</item\>**

*\<item\>*Mark. The process of restoring obliterated identification on an asset. **\</item\>**

*\<item\>*Pack. To place an item to a container for either storage or shipment after service and other maintenance operations have been completed.**\</item\>**

*\<item\>*Unpack. The act or removing an asset from a storage or shipping container in preparation to perform further maintenance (e.g., repair

or install). **</item>**

*<item>*Preserve. The action required to treat systems and equipment whether installed or stored, to ensure a serviceable condition. **</item>**

*<item>*Prepare for use. Those steps required to make an asset ready for other maintenance (e.g., remove preservatives, lubricate, etc.). **</item>**

<item> Load. This may be one of two tasks: *<seqlist>*

*<item>*For transportation, the act of placing assets onto a transportation medium (e.g., pallet, truck, container).**</item>**

<item> For weapons/weapons systems, the act of placing munitions into the weapon/weapons system. **</item></seqlist></item>**

*<item>*Unload. This may be one of two tasks:*<seqlist>*

*<item>*For transportation, the act of removing assets from a transportation medium (e.g., pallet, truck, container). **</item>**

*<item>*For weapons/weapons systems, the act of removing munitions from the weapon/weapons system. **</item></seqlist>**Assemble. The step-by step instructions to join the component pieces of an asset together to make a complete serviceable asset. **</item>**

*<item>*Disassemble. The step-by-step breakdown (taking apart) of a spare/functional group coded item to the level of its least component, that is assigned an SMR code for the level of maintenance under consideration (i.e., identified as maintenance significant) **</item>**

*<item>*Clean. Step-by-step instructions on how to remove dirt, corrosion or other contaminants from equipment. **</item>**

*<item>*Non destructive inspection. Step-by-step instructions on preparation and accomplishment of non destructive inspections. **</item>**

*<item>*Place in service. Step-by-step instructions required to place an item into service that are not covered in the service upon receipt work package. **</item>**

*<item>*Radio interference suppression. Step-by-step instructions to ensure installed equipment, either communication or other electronics, does not interfere with installed communication equipment. **</item>**

*<item>*Arm. Detailed instructions on activating munitions prior to use.**</item>**

<item><note>

*<trim.para>*The following tasks may grouped together as ground handling tasks. **</trim.para>**

</note>Towing. The step-by-step instructions to connect one vehicle to another for the purpose of having one vehicle moved through the motive power of the other vehicle. **</item>**

*<item>*Jacking. The step-by-step instructions to mechanically raise or lift a vehicle to facilitate maintenance on the vehicle. **</item>**

*<item>*Parking. Step-by-step instructions to safely place a vehicle in a lot, ramp area or other designated location. **</item>**

*<item>*Mooring. Step-by-step instructions to secure a vehicle by chains, ropes or other means to protect the vehicle from environmental conditions or secure for transportation. **</item>**

*<item>*Covering. Step-by-step instructions to place a protective wrapping over a vehicle to protect it from environmental conditions or to hide (e.g., camouflage) it. **</item>**

*<item>*Hoisting. Step-by-step instructions to allow a vehicle to be raised by cables or ropes through attaching points. **</item>**

*<item>*Sling loading. Step-by-step instructions to place a sling around a vehicle to allow it to be raised. External power. Step-by-step instructions on how to apply electrical power from any authorized power source (e.g., external generator or facility power). **</item>**
</seqlist></para>

</subpara2></subpara1>*<subpara1>*

*<title>*Explanation of Columns in the MAC**</title>**

*<para>*Column (1) Group Number. Column (1) lists Functional Group Code (FGC) numbers, the purpose of which is to identify maintenance significant components, assemblies, subassemblies, and modules with the Next Higher Assembly (NHA). Column (2) Component/Assembly.**</para>**

<para> Column (2) contains the item names of components, assemblies, subassemblies, and modules for which maintenance is authorized. **</para>**

*<para>*Column (3) Maintenance task. Column (3) lists the functions to be performed on the item listed in column (2). (For a detailed explanation of these functions, refer to "Maintenance tasks" outlined previously).**</para>**

*<para>*Column (4) Maintenance Level. Column (4) specifies each level/class of maintenance authorized to perform each function listed in column (3), by indicating work time required (expressed as man-hours in whole hours or decimals) in the appropriate sub column. This work time figure

represents the active time required to perform that maintenance task at the indicated level of maintenance. If the number or complexity of the tasks within the listed maintenance task varies at different maintenance levels, appropriate work time figures are to be shown for each level. **</para>**

*<para>*The work time figure represents the average time required to perform the prescribed task (assembly, subassembly, component, module, end item, or system) on the item under typical operating conditions for that maintenance level. This time includes preparation time (including any necessary disassembly/assembly time), troubleshooting/fault location time, and quality assurance time in addition to the time required to perform the specific tasks identified for the maintenance tasks authorized in the MAC. The symbol designations for the various maintenance levels are as follows:*<randlist>*

*<item>*Field:*<randlist>*

*<item>*O Aviation Maintenance Company**</item>**

*<item>*F Aviation Support Battalion**</item></randlist></item>**

*<item>*Sustainment*<randlist>*

&macintrowp.intro-std;	*Standard – **Introduction – Maintenance Allocation Chart (MAC)***
	The verbatim MAC Aviation introduction IAW MIL-STD-40051-1A and MIL-STD-40051-2A. Requires selecting TM type, either page-based (*%page-base;*) or frame-based (IETM) (*%frame-base;*) selectable entity, to generate the correct boilerplate text.
ELEMENT USED IN:	*<macintrowp>*
BOILERPLATE TEXT:	**"***<intro><para0>*

*<title>*Maintenance allocation chart (MAC) introduction**</title>**

<subpara1>

*<title>*The Army Maintenance System MAC**</title>**

*<para>*This introduction provides a general explanation of the maintenance and repair functions. **</para>**

*<para>*The MAC (immediately following this introduction) designates overall authority and responsibility for the performance of maintenance tasks on the identified end item or component. The application of the maintenance tasks to the end item or component shall be consistent with

MIL-STD-2361D PRODUCTION XML DTD V4.10
Text (Boilerplate) Entity Definition
M

the capacities and capabilities of the designated maintenance levels, which are shown in the MAC in column (4). Column (4) is divided into two secondary columns. These columns indicate the maintenance levels of 'Field' and 'Sustainment'. Each maintenance level column is further divided into two sub-columns. These sub-columns identify the maintenance classes and areas follows:*<seqlist>*

*<item>*Field level maintenance classes:*<seqlist>*

*<item>*Crew maintenance. This is the responsibility of a using organization to perform maintenance on its assigned equipment. It normally consists of inspecting, servicing, lubricating, adjusting, and replacing parts, minor assemblies, and subassemblies. Items with a "C" ("O" for joint service reporting) in the third position of the SMR code may be replaced at the crew level. A code of "C" ("O" for joint service) in the fourth position of the SMR code indicates complete repair is authorized at the crew level. **</item>**

*<item>*Maintainer maintenance. This is maintenance accomplished on a component, accessory, assembly, subassembly, plug-in unit, or other portion by field level units. This maintenance is performed either on the system or after it is removed. An "F" in the third position of the SMR code indicates replacement of assemblies, subassemblies, or other components is authorized at this level. An "F" in the fourth position of the SMR code indicates complete repair of the identified item is allowed at the Maintainer level. Items repaired at this level are normally returned to the user after maintenance is performed.**</item>**

</seqlist></item>

*<item>*Sustainment level maintenance classes:*<seqlist>*

*<item>*Below depot sustainment. This is maintenance accomplished on a component, accessory, assembly, subassembly, plug-in unit, or other portion either on the system or after it is removed. The item subject to maintenance has normally been forwarded to a maintenance facility away from the field level supporting units. An "H" in the third position of the SMR code indicates replacement of assemblies, subassemblies, or other components is authorized at this level. An "H" appearing in the fourth position of the SMR code indicates complete repair is possible at this level. Items are normally returned to the supply system after maintenance is performed at this level.**</item>**

*<item>*Depot. This is maintenance accomplished on a component, accessory, assembly, subassembly, plug-in unit, or other portion either on the system or after it is removed. Assets to be repaired at this level are normally returned to an Army Depot or authorized contractor facility. The replace function for this level of maintenance is indicated by the letter "D" or "K" appearing in the third position of the SMR code. A "D" or "K" appearing in the fourth position of the SMR code indicates complete repair is possible at the depot sustainment maintenance level. Items are returned to the supply system after maintenance is performed at this level.**</item></seqlist></item></seqlist></para>**

*<para>*The tools and test equipment requirements table (immediately following the MAC) lists the tools and test equipment (both special

tools and common tool sets) required for each maintenance task as referenced from the MAC. **</para>**

*<para>*The remarks table (immediately following the tools and test equipment requirements) contains supplemental instructions and explanatory notes for a particular maintenance task.**</para>**

</subpara1>*<subpara1>*

*<title>*Maintenance tasks**</title>**

*<para>*Maintenance tasks are limited to and defined as follows:*<seqlist>*

*<item>*Inspect. A function to determine the serviceability of an item by comparing its physical, mechanical, and/or electrical characteristics with established standards through examination (e.g., by sight, sound, or feel).**</item>**

*<item>*Test. To verify serviceability by measuring the mechanical, pneumatic, hydraulic, or electrical characteristics of an item and comparing those characteristics with prescribed standards, e.g., load testing of lift devices or hydrostatic testing of pressure hoses. **</item>**

*<item>*Service. Operations required periodically to keep an item in proper operating condition; e.g., to clean (includes decontaminate, when required), to preserve, to drain, to paint, or to replenish fuel, lubricants, chemical fluids, or gases. **</item>**

*<item>*Adjust. To maintain or regulate, within prescribed limits, by bringing into proper position, or by setting the operating characteristics to specified parameters. **</item>**

*<item>*Align. To adjust specified variable elements of an item to bring about optimum or desired performance. **</item>**

*<item>*Calibrate. To determine and cause corrections to be made or to be adjusted on instruments of test, measuring, and diagnostic equipment used in precision measurement. It consists of comparisons of two instruments, one of which is a certified standard of known accuracy, to detect and adjust any discrepancy in the accuracy of the instrument being compared.**</item>**

*<item>*Remove. The act of taking a sub component off an asset to allow repair or replacement of that sub-component, or to facilitate other maintenance. **</item>**

*<item>*Install. The act of placing, positioning, or otherwise locating a component or sub-component to make it part of a higher level end item. Install can be to install a new asset for the first time or reinstall an asset previously removed. The maintenance level allowed to perform an installation is determined by the third position in the SMR code. **</item>**

*<item>*Paint. This is a function to prepare and apply coats of paint. When used with munitions, the paint is applied so the ammunition can be identified and protected. **</item>**

*<item>*Replace. To install a serviceable component in its place in place of one that is unserviceable or a required time change asset. "Replace"

is authorized by the MAC and the assigned maintenance level is shown as the third position code of the SMR code. **</item>**

*<item>*Repair. The application of maintenance actions, including fault location/troubleshooting, removal, installation, disassembly, assembly, or other maintenance actions to restore serviceability to an item by correcting specific damage, fault, malfunction, or failure in the item. *<note>*

*<trim.para>*The following definitions are applicable to the "repair" maintenance task: **</trim.para>**

<trim.para> Fault location/troubleshooting. The process of investigating and detecting the cause of equipment malfunctioning; the act of isolating a fault within a system or Unit Under Test (UUT). Actions. Welding, grinding, riveting, straightening, facing, machining, and/or resurfacing.**</trim.para>**

</note></item>

*<item>*Overhaul. This is the maintenance effort (service/action) prescribed to restore an item to a completely serviceable/operational condition as required by maintenance standards in the appropriate technical publications. Overhaul is normally the highest degree of maintenance performed by the Army. Overhaul does not normally return an item to a like new condition. **</item>**

<item> Rebuild. This consists of those services/actions necessary for the restoration of unserviceable equipment to a like new condition in accordance with original manufacturing standards. Rebuild is the highest degree of material maintenance applied to Army equipment. The rebuild operation includes the act of returning to zero those age measurements (e.g., hours/miles) considered in classifying Army equipment/components. **</item>**

*<item>*Lubricate. The act of applying a material (e.g., oil or grease) to reduce friction and allow a component to operate in a more efficient manner. **</item>**

*<item>*Mark. The process of restoring obliterated identification on an asset. **</item>**

*<item>*Pack. To place an item to a container for either storage or shipment after service and other maintenance operations have been completed.**</item>**

*<item>*Unpack. The act or removing an asset from a storage or shipping container in preparation to perform further maintenance (e.g., repair or install). **</item>**

*<item>*Preserve. The action required to treat systems and equipment whether installed or stored, to ensure a serviceable condition. **</item>**

*<item>*Prepare for use. Those steps required to make an asset ready for other maintenance (e.g., remove preservatives, lubricate, etc.). **</item>**

<item> Load. This may be one of two tasks: *<seqlist>*

*<item>*For transportation, the act of placing assets onto a transportation medium (e.g., pallet, truck, container).**</item>**

<item> For weapons/weapons systems, the act of placing munitions into the weapon/weapons system. **</item></seqlist></item>**

MIL-STD-2361D PRODUCTION XML DTD V4.10
Text (Boilerplate) Entity Definition
M

*<item>*Unload. This may be one of two tasks:*<seqlist>*

*<item>*For transportation, the act of removing assets from a transportation medium (e.g., pallet, truck, container). **</item>**

*<item>*For weapons/weapons systems, the act of removing munitions from the weapon/weapons system. **</item></seqlist>**Assemble. The step-by step instructions to join the component pieces of an asset together to make a complete serviceable asset. **</item>**

*<item>*Disassemble. The step-by-step breakdown (taking apart) of a spare/functional group coded item to the level of its least component, that is assigned an SMR code for the level of maintenance under consideration (i.e., identified as maintenance significant) **</item>**

*<item>*Clean. Step-by-step instructions on how to remove dirt, corrosion or other contaminants from equipment. **</item>**

*<item>*Non destructive inspection. Step-by-step instructions on preparation and accomplishment of non destructive inspections. **</item>**

*<item>*Place in service. Step-by-step instructions required to place an item into service that are not covered in the service upon receipt work package. **</item>**

*<item>*Radio interference suppression. Step-by-step instructions to ensure installed equipment, either communication or other electronics, does not interfere with installed communication equipment. **</item>**

*<item>*Arm. Detailed instructions on activating munitions prior to use.**</item>**

<item><note>

*<trim.para>*The following tasks may grouped together as ground handling tasks. **</trim.para>**

</note>Towing. The step-by-step instructions to connect one vehicle to another for the purpose of having one vehicle moved through the motive power of the other vehicle. **</item>**

*<item>*Jacking. The step-by-step instructions to mechanically raise or lift a vehicle to facilitate maintenance on the vehicle. **</item>**

*<item>*Parking. Step-by-step instructions to safely place a vehicle in a lot, ramp area or other designated location. **</item>**

*<item>*Mooring. Step-by-step instructions to secure a vehicle by chains, ropes or other means to protect the vehicle from environmental conditions or secure for transportation. **</item>**

*<item>*Covering. Step-by-step instructions to place a protective wrapping over a vehicle to protect it from environmental conditions or to hide (e.g., camouflage) it. **</item>**

*<item>*Hoisting. Step-by-step instructions to allow a vehicle to be raised by cables or ropes through attaching points. **</item>**

*<item>*Sling loading. Step-by-step instructions to place a sling around a vehicle to allow it to be raised. External power. Step-by-step instructions

MIL-STD-2361D PRODUCTION XML DTD V4.10
Text (Boilerplate) Entity Definition
M

on how to apply electrical power from any authorized power source (e.g., external generator or facility power). **</item>**

</seqlist></para>

</subpara1>*<subpara1>*

*<title>*Explanation of Columns in the MAC**</title>**

*<para>*Column (1) Group Number. Column (1) lists Functional Group Code (FGC) numbers, the purpose of which is to identify maintenance significant components, assemblies, subassemblies, and modules with the Next Higher Assembly (NHA). Column (2) Component/Assembly.**</para>**

<para> Column (2) contains the item names of components, assemblies, subassemblies, and modules for which maintenance is authorized. **</para>**

*<para>*Column (3) Maintenance task. Column (3) lists the functions to be performed on the item listed in column (2). (For a detailed explanation of these functions, refer to "Maintenance tasks" outlined previously).**</para>**

*<para>*Column (4) Maintenance Level. Column (4) specifies each level/class of maintenance authorized to perform each function listed in column (3), by indicating work time required (expressed as man-hours in whole hours or decimals) in the appropriate sub column. This work time figure represents the active time required to perform that maintenance task at the indicated level of maintenance. If the number or complexity of the tasks within the listed maintenance task varies at different maintenance levels, appropriate work time figures are to be shown for each level. **</para>**

*<para>*The work time figure represents the average time required to perform the prescribed task (assembly, subassembly, component, module, end item, or system) on the item under typical operating conditions for that maintenance level. This time includes preparation time (including any necessary disassembly/assembly time), troubleshooting/fault location time, and quality assurance time in addition to the time required to perform the specific tasks identified for the maintenance tasks authorized in the MAC. and Marking (PPM) – ***Maintenance***

The verbatim PPM packaging information text IAW MIL-STD-40051-1A and MIL-STD-40051-2A.

ELEMENT USED IN: *<pack>*

BOILERPLATE TEXT: **"***<geninfo>*

<para0>

*<title>*PACKAGING*</title>*

*<para>*Military preservation, Level A packing, and marking shall be accomplished

in accordance with the specific packaging instructions contained in *&maintwp.ppm.packaging.wp;*.*</para>*

</para0>

<para0>

*<title>*MARKING FOR SHIPMENT AND STORAGE*</title>*

<para><seqlist>

*<item>*Storage: In addition to any special markings called out on the special packaging instruction (SPI) or in the packaging requirements code, all unit packages, intermediate packs, exterior shipping containers, and, as applicable, unitized loads shall be marked in accordance with *<extref docno="MIL-STD-129"/>* including bar coding. The repair facility is responsible for application of special markings as required by *<extref docno="MIL-STD-129"/>* regardless of whether specified in the contract/order or not. Special markings include, but are not limited to, Shelf-life markings, structural markings, and transportation special handling markings. The marking of pilferable and sensitive materiel will not identify the nature of the materiel.*</item>*

*<item>*Shipment: The repair facility shall apply identification and address markings with bar codes in accordance with *<extref docno="MIL-STD-129"/>*. A Military Shipment Label (MSL) is required

for all shipments except contractor to contractor. The MSL will include both linear and 2D bar codes per the standard. Military Shipping Label: Military Shipment Labels may be created using the Computer Automated Transportation Tool Military Shipment Label/Issue Receipt Release Document (CATT MSL/IRRD).**</item></seqlist></para></para0>**

<para0>

*<title>*HEAT TREATMENT AND MARKING OF WOOD PACKAGING MATERIALS**</title>**

*<para>*Wood Packaging Materials (WPM) (i.e., boxes, crates, skids, pallets, and any wood used as inner packaging made of non-manufactured wood) shall be constructed of lumber that has been heat-treated in accordance with the requirements of International Standard for Phytosanitary Measures (ISPM)*–*15. The WPM manufacturer shall be affiliated with an inspection agency accredited by the board of review of the American Lumber Standard Committee. The WPM manufacturer shall ensure traceability to the original source of heat treatment. Each piece of WPM shall be marked to show the conformance to the International Plant Protection Convention Standard. Certification markings shall be indelible and permanent. They may be stamped, stenciled, or branded directly onto or into the WPM. Certification marks shall be applied in a visible location on at least two opposite sides of the wood packaging product, but are not required on each individual component piece of a wood packaging product. On dunnage, the marking shall be applied every two feet to opposite surfaces of each piece. If possible, the mark shall be visible when the dunnage is placed in the load to enable inspectors to verify the WPM*’*s compliance without unloading or unstuffing the container. Foreign manufacturers shall have the heat treatment of WPM verified in accordance with their National Plant Protection Organization*’*s compliance program.**</para>**

</para0>

<para0>

*<title>*ALTERNATIVES**</title>** *<para>*The packaging requirements have been validated and the method of preservation/packing has proven successful in meeting the needs of the military distribution system, including undefined storage and shipment throughout the world. Tailoring of the packaging instructions may only be authorized by the packaging requirements developer. If tailored, prototype package is required to validate the sizes and fit requirements. Minor dimensional and size changes are acceptable provided email notification is provided to the packaging requirements developer. Any design changes or changes in the method of preservation that provide a cost savings without degrading the method of preservation or packing or affecting the serviceability of the item will be considered and responded to within 10 days of submission. The equipment proponent reserves the right to require testing to validate alternate preservation methods, materials, alternates, blocking, bracing, cushioning, and packing.**</para>**

</para0>

<a.statement> *Distribution A Statement – **Notice***

This tag contains the DODD 5230.24 specified text for an unlimited distribution technical manual. The selected distribution reason is generated through the stylesheet.

ELEMENT USED IN: *<dist>*

CONTENT MODEL IS: EMPTY

<aal> *Standard Information – **Additional Authorization List***

A list containing standard information of all additional authorization items in the AAL. These items are required to operate the equipment but are not classified as COEI or BII items. In page-based, this element functions as the table element.

ELEMENT USED IN: *<aalwp>, and <supitemwp>*

CONTENT MODEL IS: (*title*, (*aal-category*+ | *aal-entry*+))

OPTIONAL ATTRIBUTE(S)

  %frameatt; Any of the attributes in the associated attribute set may be used with this element. Refer to frameatt for a complete description.

<aal-category> *Category – **Additional Authorization List***

If a list is subdivided into parts, for example by subassemblies, the category element is used. After the category element is entered, the category title and the specific entries are entered.

ELEMENT USED IN: *<aal>*

CONTENT MODEL IS: (*title*, *aal-entry*+)

OPTIONAL ATTRIBUTE(S)

  %frameatt; Any of the attributes in the associated attribute set may be used with this element. Refer to frameatt for a complete description.

<aal-entry> *Entry – **Additional Authorization List***

An AAL entry in the AAL standard information. In page-base, the element is equivalent to a "row" element in a table.

ELEMENT USED IN: *<aal>, and <aal-category>*

CONTENT MODEL IS: (*nsn*+, *dcpno*, *ui*, *qty*)

Page – 157

OPTIONAL ATTRIBUTE(S)

%bodyidatt; | Any of the attributes in the associated attribute set may be used with this element. Refer to bodyidatt for a complete description.

<aalwp> | *Additional Authorization List (AAL) – **Work Package***

The additional authorization list work package contains a listing of AAL items. Used in TMs with operator maintenance level.

ELEMENT USED IN: | *<sim>, and <systemref>*

CONTENT MODEL IS: | (*wp.metadata*?, *wpidinfo*, *intro*, *aal*)

OPTIONAL ATTRIBUTE(S)

%wpatt; | Any of the attributes in the associated attribute set may be used with this element. Refer to wpatt for a complete description.

<abbrev> | *Abbreviations – **Wiring***

A statement that abbreviations are in accordance with ASME-Y14.38. When the abbreviation is contained in a wire diagram work package, it stands for a marking actually found on the equipment or wire.

ELEMENT USED IN: | *<wiringwp>*

CONTENT MODEL IS: | (*%titldtext;*)

OPTIONAL ATTRIBUTE(S)

%bodyidatt; | Any of the attributes in the associated attribute set may be used with this element. Refer to bodyidatt for a complete description.

<accept> | *Acceptable Condition – **Inspection Criteria for Packaging***

The element is used to enter the component/assembly packaging material acceptable condition. The element is a required entry in the Inspection Criteria for Packaging standard information. In page-base, the element is equivalent to an "entry" element in a table.

ELEMENT USED IN: | *<accpt-rpbl-nonrpbl-entry>*

CONTENT MODEL IS: | (*%data;*)*

OPTIONAL ATTRIBUTE(S)

%bodyidatt; | Any of the attributes in the associated attribute set may be used with this element. Refer to bodyidatt for a complete description.

\<acceptance\>

*Acceptance Inspections Statement – **Quality Assurance***

An acceptance statement that defines the method used for acceptance inspection.

ELEMENT USED IN: *\<qawp\>*

CONTENT MODEL IS: (*%titldtext;*)

OPTIONAL ATTRIBUTE(S)

%changelevel;   Any of the attributes in the associated attribute set may be used with this element. Refer to changelevel for a complete description.

\<acceptqual\>

*Acceptable Quality – **Classification of Material Defects***

The element identifies the acceptance quality level required for the component assembly. The element is a required entry in the Classification of Material Defects standard information. In page-base, the element is equivalent to an "entry" element in a table.

ELEMENT USED IN: *\<defect-group\>*

CONTENT MODEL IS: (*%text_ent;*)*

**\<accpt-rpbl-nonrpbl-entry\>
– *Critical Inspection for Packaging***

Acceptance, Repairable, Non-Repairable Entries

The element is a wrapper tag used to wraps the multiple acceptable, repairable, and nonrepairable conditions for a component/assembly in the Inspection Criteria for Packaging standard information. In page-base, the element is equivalent to an "entry" element in a table.

ELEMENT USED IN: *\<compnt-assem-entry\>*

CONTENT MODEL IS: (*accept*, *repairable*, *nonrepairable*)

OPTIONAL ATTRIBUTE(S)

%applidatt;   Any of the attributes in the associated attribute set may be used with this element. Refer to applidatt for a complete description.

\<action\>

*Corrective Action – **Troubleshooting***

The element is the corrective action steps or reference to fix an error, problem, defect, or symptom.

ELEMENT USED IN: *\<checkstep\>, \<endblock\>, \<faultcode\>, \<faultproc\>, \<messageitem\>, \<tsindx.messageword-entry\>, \<tsindx.symptom-entry\>, and \<tsindx.system-entry\>*

CONTENT MODEL IS: (*%alert;*, ((*%step;*)+ | *%p;*))

\<adminops\>   *Administrative or Operational Use* **– Distribution Reason**

Indicates the distribution statement restriction reason as the Administrative or Operational Use and is defined as to protect technical or operational data or information from automatic dissemination under the International Exchange Program or by other means. This protection covers publications required solely for official use or strictly for administrative or operational purposes. This statement may be applied to manuals, pamphlets, technical orders, technical reports, and other publications containing valuable technical or operational data.

ELEMENT USED IN: *%commondistreason;*

CONTENT MODEL IS: EMPTY

REQUIRED ATTRIBUTE(S)

distreason   Distribution reason text for the distribution statement.
DECLARED VALUE: Any character

DEFAULT VALUE =   Administrative-Operational Use

\<aftermessage\>   *Link After Message* **– Dialog Box**

After acknowledging the message dialog box, perform the specified linkage action.

ELEMENT USED IN: *\<message\>*

CONTENT MODEL IS: (*link*)

\<aindx\>   *Alphabetical* **– Index**

The element is used for an alphabetical index of subjects that may be useful to the TM user; appears in the rear matter of the page-based TM. The index can be automatically generated when elements to appear in the index have been properly tagged within the instance and defined in the stylesheet. The alphabetical index is an optional task element because the composition system applications varies how it handles indexing. Some composition systems can not handle an automated task such as this alphabetical index so it has to be manually created. While other composition systems can generate the index with the assistance of a pre or post process, some composition systems have the capability to generate the index without any assistance.

ELEMENT USED IN: *\<rear\>*

CONTENT MODEL IS: (*title*, *trim.para*?, *col.title*, *col.title*?, (*alphaindx*?, *indexentry*)*)?

Element Definition
A

REQUIRED ATTRIBUTE(S)

maintitl Supplies a literal version of the maintenance-level title.
  DECLARED VALUE: Any character

maintlvls Specifies the maintenance level(s) authorized to use this manual;
this attribute value is used in the style sheet to supply the literal
expression of the TM's maintenance level.
  DECLARED VALUE: List (10 | 13 | 14 | 23 | 24 | 40)

revno The overall revision number for the manual.
  DECLARED VALUE: Any character

OPTIONAL ATTRIBUTE(S)

pubno Publication number.
  DECLARED VALUE: Any character

rpstl Specifies whether or not the manual includes a RPSTL among its appendixes.
  DECLARED VALUE: "yes" or "no"

  DEFAULT VALUE = No

multivolume Is the manual broken into volumes.
  DECLARED VALUE: "yes" or "no"

  DEFAULT VALUE = No

\<ammo.defect\> *Ammunition Defect –* **Maintenance Task**

The ammunition defect procedure for performing visual inspection
of ammunition/containers and shall include classification and
disposition of defective ammunition/containers.

ELEMENT USED IN: *\<ammowp\>, and \<surtsk\>*

CONTENT MODEL IS: (*proc*)

OPTIONAL ATTRIBUTE(S)

%taskatt; Any of the attributes in the associated attribute set may be used with
this element. Refer to taskatt for a complete description.

\<ammo.handling\> *Handling Ammunition –* **Maintenance Task**

Procedures for handling ammunition.

ELEMENT USED IN: *\<ammowp\>, \<surtsk\>, and %ammo_ent;*

CONTENT MODEL IS: (*unpack* | *pack*)

MIL-STD-2361D PRODUCTION XML DTD V4.10
Element Definition

OPTIONAL ATTRIBUTE(S)

%bodyidatt;	Any of the attributes in the associated attribute set may be used with this element. Refer to bodyidatt for a complete description.

\<bdar-repair\>   *Repair – **BDAR***

This element provides the following types of repairs under the General Repair Work Package.

General repair. Procedures provided for items that are not necessarily associated with a specific component or subsystem of the end item.

End item repair. Procedures for repair of the overall end item.

Major functional group repair. Procedures for repair of major functional groups applicable to the equipment/system covered by the manual.

Auxiliary equipment. Procedures for repair of battle damage to auxiliary equipment.

ELEMENT USED IN: *\<genrepairwp\>*

CONTENT MODEL IS: (*title*, *geninfo*, (*bdar-repair-proc* | *bdar-repair-option*))

OPTIONAL ATTRIBUTE(S)

%bodyidatt;	Any of the attributes in the associated attribute set may be used with this element. Refer to bodyidatt for a complete description.

\<bdar-repair-option\>   *Optional Repair – **BDAR***

This element provides optional method of making the same repair/fix.

ELEMENT USED IN: *\<bdar-repair\>*

CONTENT MODEL IS: (*title*, *para*?, *bdar-repair-proc*)

OPTIONAL ATTRIBUTE(S)

%bodyidatt;	Any of the attributes in the associated attribute set may be used with this element. Refer to bodyidatt for a complete description.

\<bdar-repair-proc\>   *Repair Procedure – **BDAR***

This element provides the item name and the trouble with a general statement(s) concerning the particular type of trouble and repair to be made.

ELEMENT USED IN: *\<bdar-repair\>, and \<bdar-repair-option\>*

CONTENT MODEL IS: (*bdar-limitation*+, *bdar-persn*?, *bdar-mtrl-tools*?, *proc*)

OPTIONAL ATTRIBUTE(S)

%bodyatt;   Any of the attributes in the associated attribute set may be used with this element. Refer to bodyatt for a complete description.

\<boolean\>   *Boolean – Value Type*

The element is used define a state (variable) information as a Boolean type (true or false).

ELEMENT USED IN: *%value;*

CONTENT MODEL IS: (*true* \| *false*)

\<branchref\>   *Branch Reference – Logic Tree – Troubleshooting*

An element, used primarily for page-based manuals, to provide page reference and pointer to the next logic test branch. The element is needed when test block

MIL-STD-2361D PRODUCTION XML DTD V4.10
Element Definition
B

is not located on the current page. In frame-based manuals, no information is displayed at this intermediate, but display the test block being referenced.

ELEMENT USED IN:	*\<logicproc\>*
CONTENT MODEL IS:	EMPTY

REQUIRED ATTRIBUTE(S)

textblockid
  DECLARED VALUE: ID Reference
  Reference to the test block, which the branch is to go next.

branch
  DECLARED VALUE: ID
  Unique identifier to reference the branch.

branchfrom
  DECLARED VALUE: ID Reference (one or more)
  Reference(s) where the logic block came from.

branchto
  DECLARED VALUE: ID Reference (one or more)
  Reference(s) next logic block to perform.

OPTIONAL ATTRIBUTE(S)

branchlabel
  DECLARED VALUE: Any character
  Reference label for the logic block.

\<brim\>   *General Repair – **Chapter – BDAR***

Used only for a separate BDAR manual and contains the General Repair Work Packages.

ELEMENT USED IN:	*\<bdar\>*
CONTENT MODEL IS:	(*titlepg*, *genrepairwp*+)

OPTIONAL ATTRIBUTE(S)

%imatt;   Any of the attributes in the associated attribute set may be used with this element. Refer to imatt for a complete description.

\<brk\>   *Line Break*

Causes a line break in the narrative. May be used option-ally in a frame-based manual.

ELEMENT USED IN:	*\<entry\>, \<name\>, \<stitle\>, \<subject\>, \<title\>, and \<weapons_system\>*

<coeitab>   *Standard Information – **Option A – Components of End Item***

All the spare/repair parts that are removed from the major end item and separately packaged or stowed for transportation or movement are listed in the COEI list. Option A has all the illustrations before the itemized list. In page-based, this element functions as the table element.

ELEMENT USED IN: *<coei>*

CONTENT MODEL IS: (*title*, (*coei-category*+ | *coei-entry*+), *on-board-spares*?)

OPTIONAL ATTRIBUTE(S)

%bodyidatt;   Any of the attributes in the associated attribute set may be used with this element. Refer to bodyidatt for a complete description.

<col.title>   *Column List Title*

Specifies a list column title for Index, TOC, and LOEP/WP.

ELEMENT USED IN: *<aindx>, <contents>, and <loepwp>*

CONTENT MODEL IS: (#PCDATA

OPTIONAL ATTRIBUTE(S)

newline   Specify if the element starts a new line or continue inline. This used when multiple lines are needed for the column list title.
DECLARED VALUE: "yes" or "no"

<colspec>   *Column Specification – **CALS Table***

Column characteristics, a column being a vertical portion of a table *<table>*. The default values come from the table group *<tgroup>*, table head *<thead>* starting the current (enclosing) group. Each *<colspec>* is for a single column, so it properly has a column number (colnum) implicitly in order starting from 1, and an an optional colname by which it is known when used in any *<spanspec>* or in *<entry>*. A *<colspec>* contained in table head *<thead>* should be complete for all columns. It overrides those on the containing table group *<tgroup>* and applies to just the table head *<thead>*. If there is no *<colspec>* used within table head *<thead>*, then the *<colspec>* of the containing table group *<tgroup>* (or the prior table group *<tgroup>*) is used. *<colspec>* s from the containing table group *<tgroup>* apply to table body *<tbody>*.

ELEMENT USED IN: *<tgroup>, and <thead>*

CONTENT MODEL IS: EMPTY

MIL-STD-2361D PRODUCTION XML DTD V4.10
Element Definition
C

OPTIONAL ATTRIBUTE(S)

align
Specifies the horizontal alignment of content within the column.
  DECLARED VALUE: List (left (flush left), center (centered), right (flush right), justify (both flush left and flush right), or char (align on leftmost of a specified character, positioned in column by charoff attribute).)

char
For align="char," the value is the single alignment character around which the entry is aligned; the first occurrence of the character is used as the alignment point. Entries not containing this character are aligned to the left of this position.
  DECLARED VALUE: Any character

charoff
For align="char," horizontal character offset is the percent of the current column width to the left of the (left edge of the) alignment character.
  DECLARED VALUE: Any character

colname
Specifies name of column, used to specify the position in a row, or the start or end of a horizontal span of columns.
  DECLARED VALUE: Name Token

colsep
Default for all items in this column (within the enclosing group) of the table. If one, display the internal column vertical ruling to the right of each item; if zero, do not display it. Ignored for the last column, where the frame setting applies.
  DECLARED VALUE: List (0 | 1)

colnum
Identifies the column number, counting from 1 at left of the table.
  DECLARED VALUE: Any character

colwidth
Enter either a proportional measure of the form number*, i.e., "5*" for 5 times the proportion, or "*" (="1*"); or, fixed measure, i.e., 2pt for 2 points, 3pi for 3 picas. Coefficients are positive integers.
  DECLARED VALUE: Any character

rowsep
Default for all items in this column (within the enclosing group) of the table. If one, display the internal horizontal row ruling below each item. If zero, do not display it. Ignored for the last row of the table, since overridden by the frame setting.
  DECLARED VALUE: List (0 | 1)

\<damage-assesswp\> *Damage Assessment – **Work Package – BDAR***

The work package contains the battle damage assessment that includes an introduction and fault assessment tables. The work packages contains one of the following information types:

End item. The battle damage assessment pertaining to the overall end item or major subsystems and its capability to perform its mission essential functions.

Major functional group. The battle damage assessment pertaining information by major functional groups applicable to the equipment/system covered by the manual.

Auxiliary Equipment. The battle damage assessment pertaining for auxiliary equipment.

ELEMENT USED IN: *\<baim\>, and \<bim\>*

CONTENT MODEL IS: (*wp.metadata*?, *wpidinfo*, *intro*, (*table* | *figure* | *logicproc*)+)

OPTIONAL ATTRIBUTE(S)

%wpatt; Any of the attributes in the associated attribute set may be used with this element. Refer to wpatt for a complete description.

\<dataitem\> *Data Items – **Signal Item – Troubleshooting***

This element contains data items for a particular pass/fail operational check; specific data items are contained in child elements denoting the data type, such as memory location, appropriate data, or normal responses.

ELEMENT USED IN: *\<signal-item\>*

CONTENT MODEL IS: (*memloc*, *memdata*, *condition*, *sigfunc*)

OPTIONAL ATTRIBUTE(S)

%bodyidatt; Any of the attributes in the associated attribute set may be used with this element. Refer to bodyidatt for a complete description.

\<date\> *Date*

The element is used to enter a calendar date.

ELEMENT USED IN: *\<change.history\>, \<coverpage\>, \<frntcover\>, \<frntcover_abbreviated\>, \<pmi.pecul-row\>, \<titleblk\>, %taskatt;, and %wpatt;*

MIL-STD-2361D PRODUCTION XML DTD V4.10
Element Definition
E

<emphasis>   *Emphasis*

The scope and style of emphasized information is indicated by enclosing the material with a start and end tags. Emphasis element should be used only in situations where the emphasized material is embedded in plain text or where an exception from the usual style of the element specified in the style sheet is needed. Emphasis elements can be nested to specify combinatory styles, such as underlined bold italic.

ELEMENT USED IN: *%format;*

CONTENT MODEL IS: (*%text_ent;*)*

REQUIRED ATTRIBUTE(S)

  emph   Chose from the list of possible emphasis characteristics.
    DECLARED VALUE: List (caps | bold | italic | bolditalic | uline | strikeout | 2line | smallcaps | overline | reverse)

OPTIONAL ATTRIBUTE(S)

  color   Color that is used as a means of emphasis.
    DECLARED VALUE: Any character

<empty>   *Is Value Assign – **Boolean Function***

If a state (variable) information has been a value. Returns "True" if value was assigned, otherwise returns "False".

ELEMENT USED IN: *%unop;*

CONTENT MODEL IS: EMPTY

<enable>   *Component Enabled – **Dialog Box***

Evaluates the expression or variable to determine if the associated dialog component is enabled or disabled (grayed out and inactived).

ELEMENT USED IN: *<binarymenu>, <choice>, <dialog-group>, <fillin>, and <menu>*

CONTENT MODEL IS: (*expression*)

<endblock>   *End Block – **Logic Tree – Troubleshooting***

An end block concludes a path in a logical procedural table/diagram. Based on the indicators or conditions from the test procedure, the malfunction will be identified and resolved with corrective action.

ELEMENT USED IN: *<logicproc>*

CONTENT MODEL IS: (*malfunc*, *action*)

MIL-STD-2361D PRODUCTION XML DTD V4.10
Element Definition
E

REQUIRED ATTRIBUTE(S)

type
Specifies the logical value associated with the current element. This value may be displayed in either paper or electronic display.
DECLARED VALUE: List (yes, no, pass, fail, true, nottrue)

branch
Specifies the unique identifier of the current branch.
DECLARED VALUE: ID

branchfrom
References the identifiers of the branch or branches from which the current branch has descended.
DECLARED VALUE: ID Reference

OPTIONAL ATTRIBUTE(S)

branchlabel
Supplies an explicit numeric or alphanumeric identifier of the origin.
DECLARED VALUE: Any character

\<endcondition\>   *Looping End Criteria – **Loop – Evaluation***

Specify the condition that stops the looping function. The ending criteria is used as a while loop or until loop. Caution needs to be taken to insure against infinite looping by making an ending condition (i.e., count number of times).

ELEMENT USED IN: *\<loop\>, and \<loopfor\>*

CONTENT MODEL IS: (*expression*)

OPTIONAL ATTRIBUTE(S)

id
An identifier of the element which is assigned at origination and which remains unchanged as the document is revised or updated even though the automatically assigned enumeration or manually-assigned "labels" change (in some cases many times). The value of the "id" is used when making references to the element from other portions of the document. If no ID is given, none will be maintained and the element can then not be cross-referenced by means of an IDREF on another element or with local linking element.
DECLARED VALUE: ID

\<entry\>   *Entry – **CALS Table***

Specifies an entry in a table. The intersection of row location and column location as specified through the entry element locate a table cell, including spanning cells. Default values come from the table *\<table\>*, table group *\<tgroup\>*, column specification *\<colspec\>*, table head *\<thead\>*, table body *\<tbody\>*, or row *\<row\>* attribute list

Page – 231

MIL-STD-2361D PRODUCTION XML DTD V4.10
Element Definition
E

values for like-named attributes. A spanning entry not specified by a spanspec gets its defaults from its starting column.

ELEMENT USED IN: *<row>*

CONTENT MODEL IS: (*%text_ent;* | *%list;* | *trim.para* | *graphic* | *step1* | *step1-alt* | *figure* | *proc* | *note* | *brk*)*

OPTIONAL ATTRIBUTE(S)

align
    Specifies the horizontal alignment of content within the entry.
    DECLARED VALUE: List (left (flush left), center (centered), right (flush right), justify (both flush left and flush right), or char (align on leftmost of a specified character, positioned in column by charoff attribute).)

char
    For align="char," the value is the single alignment character around which the entry is aligned; the first occurrence of the character is used as the alignment point. Entries not containing this character are aligned to the left of this position.
    DECLARED VALUE: Any character

charoff
    For align="char," horizontal character offset is the percent of the current column width to the left of the (left edge of the) alignment character.
    DECLARED VALUE: Any character

colname
    Specifies name of column. Omit if spanname is present.
    DECLARED VALUE: Name Token

colsep
    If one, display the internal column vertical ruling to the right of each item; if zero, do not display it. Ignored for the last column, where the frame setting applies.
    DECLARED VALUE: List (0 | 1)

morerows
    Specifies number of additional rows covered by a vertical straddle.
    DECLARED VALUE: Any character

    DEFAULT VALUE =   0

nameend
    Specifies name of the right most column of span. Names are identified in *<colspec>* of the current *<tgroup>*.
    DECLARED VALUE: Name Token

namest
    Specifies name of the left most column of span; can be used in combination with "nameend" as an alternative to "spanname." Names are identified in *<colspec>* of the current *<tgroup>*.
    DECLARED VALUE: Name Token

OPTIONAL ATTRIBUTE(S)

%bodyidatt;   Any of the attributes in the associated attribute set may be used with this element. Refer to bodyidatt for a complete description.

\<faultreports\>   *Fault Code Reference Index* – ***Troubleshooting***

The element is used for a fault code reference table contained in an Operational Checkout Work Package. The fault code reference index can be represented in a narrative format or as tabular. It may contain a title followed by an optional general information containing at least one fault code. The fault code reference index shall consist of fault code(s) which leads to a corrective action. This corrective action can either be stated as a specific remedy or can be a reference to a maintenance work package. If applicable, additional follow-on operational testing procedures shall be included based on the corrective action.

ELEMENT USED IN: *\<opcheckproc\>*

CONTENT MODEL IS: (*title*?, *geninfo*?, *%alert;*, (*table* | *faultcode*+))

MIL-STD-2361D PRODUCTION XML DTD V4.10
Element Definition
F

REQUIRED ATTRIBUTE(S)

indxcols Specifies number of columns in the index; although an index of message words will have three columns, an index of fault reports from built-in diagnostics may have only two.
DECLARED VALUE: List (2, 3)

OPTIONAL ATTRIBUTE(S)

reftype Specifies the type of reference location used. Indicates the type of index reference to other locations in the manual.
DECLARED VALUE: List (wp, page, tsloc)
DEFAULT VALUE = wp

%bodyidatt; Any of the attributes in the associated attribute set may be used with this element. Refer to bodyidatt for a complete description.

<figure> *Figure – Graphic*

A figure, which may contain a graphic illustration, multi-sheet illustrations, graphic chart, or text illustrations. When a precondition exists, the element is only executed if the condition is true.

ELEMENT USED IN: *<bdar-manuitem>, <chkeqp>, <comp-item>, <ctrlindproc>, <ctrlindtab>, <ctrlindwp>, <damage-assesswp>, <decalinfo>, <entry>, <eqpdata>, <eqpdesc>, <figure-alt>, <formchart>, <geninfo>, <instructplt>, <introwp>, <item>, <loaddesc>, <manuitem>, <oipwp>, <para>, <pi.category>, <pmi-cklistwp>, <pmiwp>, <pms-inspecwp>, <stowinfo>, <wiringdiag>, %figtab;, and %referencetype;*

CONTENT MODEL IS: *(precond?, title, (subfig+ | (graphic, legend?) | table | verbatim))*

OPTIONAL ATTRIBUTE(S)

application The illustration is used in page-based, frame-based, or both presentation applications.
DECLARED VALUE: List (page, frame, both)
DEFAULT VALUE = both

figtype Specifies the figure type, whether current page size, inline oversize (foldout), or oversize placed at rear of TM.
DECLARED VALUE: List (normal-page, fo-rear)
DEFAULT VALUE = normal-page

fo-size If figtype attribute value is other than "normal-page, "specifies the size of the foldout.
DECLARED VALUE: List (25x11, 35x11, 45x11)

MIL-STD-2361D PRODUCTION XML DTD V4.10
Element Definition
F

---

tocentry	Defines the indenture level in the TOC. When the level is zero, no entry in the TOC is used.
DECLARED VALUE:	List (0 | 1 | 2 | 3 | 4 | 5)
DEFAULT VALUE =	1
pane	In an IETM, should the figure appear in a separate data pane?
DECLARED VALUE:	"yes" or "no"
DEFAULT VALUE =	no
label	Figure number for composition that cannot auto-generate.
DECLARED VALUE:	Any character
applicable	Reference to the applicable configuration(s) specified in the WP identification information. When using an IETM that can filter information, this information is not presented when not applicable to the current configuration. Presentations that do not filter information, the information will be identified by the assigned associated abbreviation to designate applicability of the information.
DECLARED VALUE:	ID Reference (one or more)
%bodyidatt;	Any of the attributes in the associated attribute set may be used with this element. Refer to bodyidatt for a complete description.

\<figure-alt\>	*Conditional Figure – **Graphic***
	The element provides multiple element options depending on the result from the precondition state (variable) information. Zero or one conditional element can be selected for any given condition.
ELEMENT USED IN:	*\<item\>, \<para\>, and %figtab;*
CONTENT MODEL IS:	(*figure*+)
OPTIONAL ATTRIBUTE(S)	
id	An identifier of the element which is assigned at origination and which remains unchanged as the document is revised or updated even though the automatically assigned enumeration or manually-assigned "labels" change (in some cases many times). The value of the "id" is used when making references to the element from other portions of the document. If no ID is given, none will be maintained and the element can then not be cross-referenced by means of an IDREF on another element or with local linking element.
DECLARED VALUE:	ID
%secur;	Any of the attributes in the associated attribute set may be used with this element. Refer to secur for a complete description.

\<foldsect\>   *Foldout Section*

The element is the TM rear matter section marker that the foldout
(oversize) illustrations are placed. The foldout figures is extracted (not
printed with the work package) from the work package and appears
in the foldout section, when the figure was identified as a foldout
(done by setting the ***\<figure figtype="fo-rear"\>***).

ELEMENT USED IN: ***\<rear\>***

CONTENT MODEL IS: EMPTY

OPTIONAL ATTRIBUTE(S)

  %stdinfoatt;   Any of the attributes in the associated attribute set may be used with this
                                  element. Refer to stdinfoatt for a complete description.

\<follow-on\>   *Follow-On Corrective Action –* ***Fault Report – Troubleshooting***

The element is a follow-on procedure(s) to the corrective action
in the fault code reference index. In page-base, the element is
equivalent to an "entry" element in a table.

ELEMENT USED IN: ***\<faultcode\>***

CONTENT MODEL IS: (***para*** | (***%step;***)+ | ***%localref;***)

REQUIRED ATTRIBUTE(S)

  id   An identifier of the element which is assigned at origination and which
                                  remains unchanged as the document is revised or updated even though the
                                  automatically assigned enumeration or manually-assigned "labels" change (in
                                  some cases many times). The value of the "id" is used when making references
                                  to the element from other portions of the document. If no ID is given, none
                                  will be maintained and the element can then not be cross-referenced by means
                                  of an IDREF on another element or with local linking element.

CONTENT MODEL IS: | (#PCDATA

OPTIONAL ATTRIBUTE(S)

%bodyidatt; | Any of the attributes in the associated attribute set may be used with this element. Refer to bodyidatt for a complete description.

\<increment\> | *For Loop Increment – **Loop – Evaluation***

The element provides the expression to increment the FOR LOOP counter.

ELEMENT USED IN: | *\<loopfor\>*

CONTENT MODEL IS: | (*expression*)

\<index\> | *Substring – **String Function***

The index operator supports one or two index values. The first index value determines the starting string pointer position A positive index value means an index position counted from the beginning of the string. A negative index-value is counted from the end. A one (1) means the start of the string. A zero (0) means the end of the string. The second index value is the number of characters in the substring. If no second index value is present the first index pointer to end of the string is returned.

ELEMENT USED IN: | *%unop;*

CONTENT MODEL IS: | (*indexvalue*, *indexvalue*?)

\<indexentry\> | *Entry – **Index***

This element contains the necessary data to create an index manually or through a pre-process. This element is recursive to allow the required index levels for the manual.

ELEMENT USED IN: | *\<aindx\>, and \<indexentry\>*

CONTENT MODEL IS: | (*title*, ((*wpno*, *pageno*) | *pageno*)*, *indexentry**)

OPTIONAL ATTRIBUTE(S)

Element Definition
J

\<jack\>   *Jacking – **Maintenance Task***

A maintenance task including procedures for blocking, support-
ing, and shoring the equipment.

ELEMENT USED IN: *\<maintsk\>*

CONTENT MODEL IS: (*proc*)

OPTIONAL ATTRIBUTE(S)

   %taskatt;   Any of the attributes in the associated attribute set may be used with
                                     this element. Refer to taskatt for a complete description.

MIL-STD-2361D PRODUCTION XML DTD V4.10
Element Definition
K

\<key>   *Key – **Controls and Indicators***

Identifies a key or callout that locates a control or indicator shown on the related figure. In page-base, the element is equivalent to an "entry" element in a table.

ELEMENT USED IN: *\<ctrlindrow>*

CONTENT MODEL IS: (#PCDATA

\<keyword.search>   *Keyword Search Word or Phrase – **Work Package Metadata***

For an IETM, keyword to search IAW the functionality matrix in MIL-STD-40051-1. Each keyword or phrase uses a separate element.

ELEMENT USED IN: *\<wp.metadata>*

CONTENT MODEL IS: (#PCDATA

\<kititem>   *Kit Items – **Parts Information***

Kit repair parts is listed under the kit item and contains quantity, figure number, and item number where the kit information is referenced. In page-base, the element is equivalent to an "entry" element in a table.

ELEMENT USED IN: *\<pi.item>*

CONTENT MODEL IS: (*name*, *qty*, *callout*)

OPTIONAL ATTRIBUTE(S)

   %bodyidatt;   Any of the attributes in the associated attribute set may be used with this element. Refer to bodyidatt for a complete description.

\<kitswp>   *Kits Items List – **Work Package***

Separate work package for listing the kit items, instead of specifying in the part lists work package.

ELEMENT USED IN: *\<pim>, and \<systemhierarchy>*

CONTENT MODEL IS: (*wp.metadata*?, *wpidinfo*, *pi.category*+)

OPTIONAL ATTRIBUTE(S)

   %wpatt;   Any of the attributes in the associated attribute set may be used with this element. Refer to wpatt for a complete description.

MIL-STD-2361D PRODUCTION XML DTD V4.10
Element Definition
L

<l>   *TASMG Hours – **2 Maintenance Level – Maintenance Allocation Chart***

Grouping of the work time for TASMG maintenance level (L). In page-base, the element is equivalent to an "entry" element in a table.

ELEMENT USED IN: *<avmaintclass-2lvl>*

CONTENT MODEL IS: (#PCDATA

<lcn>   *Logistic Control Number (LCN) – **Metadata***

Provides the Logistic Control Number (LCN) for additional search capability.

ELEMENT USED IN: *<systemnomen>*

CONTENT MODEL IS: (#PCDATA

<le>   *Less Than or Equal – **Boolean – Evaluation***

Returns a "True" value if the first number is less than or equal to the second number, otherwise returns a "False" value.

ELEMENT USED IN: *%binop;*

CONTENT MODEL IS: EMPTY

<legend>   *Legend – **Graphic***

The legend defines symbols or terms used in the figure. In page-based, this element functions as the table element.

ELEMENT USED IN: *<figure>, and <subfig>*

CONTENT MODEL IS: (*title*, *legend.item*+)

OPTIONAL ATTRIBUTE(S)

   %changelevel;   Any of the attributes in the associated attribute set may be used with this element. Refer to changelevel for a complete description.

<legend.item>   *Legend Item – **Graphic***

Contains each legend item information. In page-base, the element is equivalent to a "row" element in a table.

ELEMENT USED IN: *<legend>*

CONTENT MODEL IS: ((*term* | *callout*), *def*, *xref*?)

MIL-STD-2361D PRODUCTION XML DTD V4.10
Element Definition
L

OPTIONAL ATTRIBUTE(S)

%changelevel;   Any of the attributes in the associated attribute set may be used with this element. Refer to changelevel for a complete description.

\<link\>   *Linking – Linkage*

The link element provides a capability to reference internal or external targets. The link can be displayed either inline or as a message dialog box. The pretext and posttext elements provide additional wording not part of the link hotspot. The hotspot can be a symbol, text, or generated information from the target. When returning from the link the author can define next location to display next or specify user interaction to perform.

ELEMENT USED IN: *\<aftermessage\>, \<button\>, \<choice\>, \<contententry\>, \<da2028\>, \<material-list\>, \<resultwithoutstate\>, \<resultwithstate\>, \<returnlink\>, %extref_ent;, %linkref;, and %localref;*

CONTENT MODEL IS: (*title*?, (*pretext*?, (*symbol* | *ref.generate* | *prompt*), *posttext*?)?, (*returnlink* | *interaction*)?)

REQUIRED ATTRIBUTE(S)

xmlns:xlink   Specifies the name space for the XML linking reference.
    DECLARED VALUE: Any character

    DEFAULT VALUE =   FIXED "http://www.w3.org/1999/xlink"

xlink:type   Defines the XML link type. Currently MIL-STD-2361 is only allowing simple linking.
    DECLARED VALUE: List (simple | complex)

    DEFAULT VALUE =   FIXED "simple"

OPTIONAL ATTRIBUTE(S)

application   The link is used for frame only, page only or both.
    DECLARED VALUE: List (frame | page | both)

    DEFAULT VALUE =   frame

local   Local or internal cross reference to an ID target.
    DECLARED VALUE: ID Reference

localrange   Local or internal ending cross reference to an ID target. The local and localrange specify a range (i.e., step 3 - 6).
    DECLARED VALUE: ID Reference

xlink:href   Specify an URI reference to an external document. Specify an ID target in the external document use "#" and then the target ID. (i.e., www.asrl.com#tmdtd).
    DECLARED VALUE: Any character

Page – 283

MIL-STD-2361D PRODUCTION XML DTD V4.10
Element Definition
L

xreftype	Defines the cross reference type (i.e., graphic or work package).
DECLARED VALUE:	List (%referencetype;)
linkobject	Specify the target ID object type (i.e., software application, CGM, TIFF).
DECLARED VALUE:	List (%notation.class;)
linktype	Defines whether the link will return back to current link position or remains at the target ID. Undefined is determined by the IETM system.
DECLARED VALUE:	List (goto | return | undefined)
DEFAULT VALUE =	goto
linkaction	Does the link action jump automatically or is prompted.
DECLARED VALUE:	List (prompt | immediate)
DEFAULT VALUE =	prompt
popup	Is the prompt inline or popup.
DECLARED VALUE:	"yes" or "no"
DEFAULT VALUE =	no
parameter	Application software parameters.
DECLARED VALUE:	Any character
alt	Alternative graphical text to display about the graphic content.
DECLARED VALUE:	Any character
%applidatt;	Any of the attributes in the associated attribute set may be used with this element. Refer to applidatt for a complete description.

<ln>   *Natural Logarithm* **– Mathematical Function**

The element will evaluate the value of natural logarithm (ln).

ELEMENT USED IN:	*%trigop;*
CONTENT MODEL IS:	EMPTY

<loa>   *List of Abbreviation/Acronyms* **– General Information**

A lists of all abbreviations, acronyms, signs, or symbols used in the TM.

ELEMENT USED IN:	*<ginfowp>*
CONTENT MODEL IS:	(*%titldtext;*)

OPTIONAL ATTRIBUTE(S)

%bodyidatt;	Any of the attributes in the associated attribute set may be used with this element. Refer to bodyidatt for a complete description.

Element Definition
L

\<load\>   *Load – Maintenance Task*

Instructions for placing assets onto a transportation medium (e.g., pallet, truck, container) or munitions into a weapon/weapon system shall be prepared as required to support the specific equipment.

ELEMENT USED IN: *\<maintsk\>*

CONTENT MODEL IS: (*proc*)

OPTIONAL ATTRIBUTE(S)

%taskatt;   Any of the attributes in the associated attribute set may be used with this element. Refer to taskatt for a complete description.

\<loaddesc\>   *Loading Description*

Identifies a description of equipment loading, including illustrations of the end item with equipment locations and a standard information load list. In page-based, this element functions as the table element.

ELEMENT USED IN: *\<eqploadwp\>*

CONTENT MODEL IS: (*title*, (*figure*, (*table* | *loadlist*))+)

REQUIRED ATTRIBUTE(S)

type   Specifies the type of loading plan
     DECLARED VALUE: List (tac (tactical), notac (non tactical))

OPTIONAL ATTRIBUTE(S)

%applidatt;   Any of the attributes in the associated attribute set may be used with this element. Refer to applidatt for a complete description.

\<loadlist\>   *Loading List*

Identifies a standard information loading list that lists all applicable equipment by illustration identification number and item name. The list is on the same page or adjacent to the illustration. In page-base, the element is equivalent to a "row" element in a table.

ELEMENT USED IN: *\<loaddesc\>*

CONTENT MODEL IS: (*callout*, *item*)+

OPTIONAL ATTRIBUTE(S)

%changelevel;   Any of the attributes in the associated attribute set may be used with this element. Refer to changelevel for a complete description.

MIL-STD-2361D PRODUCTION XML DTD V4.10
Element Definition
L

%secur;	Any of the attributes in the associated attribute set may be used with this element. Refer to secur for a complete description.

\<locdesc\>
– Equipment Description and Data

Location and Description of Major Components

Descriptive data on the location and description of major components of the equipment.

ELEMENT USED IN:	*\<descproc\>, and \<descwp\>*
CONTENT MODEL IS:	(*title*, (*%mixparagraph;*)?, *comp-item*+)

OPTIONAL ATTRIBUTE(S)

%bodyatt;	Any of the attributes in the associated attribute set may be used with this element. Refer to bodyatt for a complete description.

\<loepwp\>

List of Effective Pages and Work Package

The list of effective work packages lists the latest work packages in the TM. The element is prepared along with the basic version of the TM and each subsequent change.

ELEMENT USED IN:	*\<lubeorder\>, \<paper.frnt\>, and \<volume\>*
CONTENT MODEL IS:	(*wp.metadata*?, *trim.para*?, *title*, *note*?, *issuechg*, *totalnumberof*+, *col.title*, *col.title*, (*chgvol*?, *chghistory*)+)

\<log\>

Logarithm – Mathematical Function

The element will evaluate the value of logarithm (log).

ELEMENT USED IN:	*%trigop;*
CONTENT MODEL IS:	EMPTY

\<logicproc\>

Text Logic Procedure – Troubleshooting

The element identifies a method of troubleshooting combining text and logic. A title is required followed by point of origin , and consisting of either a test block (testing to determine fault) or a end block (isolated fault). Prior to point of origin , warnings , cautions , and notes may be entered.

ELEMENT USED IN:	*\<damage-assesswp\>, and \<tsproc\>*
CONTENT MODEL IS:	(*title*, *%alert;*, *origin*, (*testblock* | *endblock* | *branchref*)+)

Page – 286

Element Definition
L

OPTIONAL ATTRIBUTE(S)

%bodyidatt;   Any of the attributes in the associated attribute set may be used with this element. Refer to bodyidatt for a complete description.

<loop>   *Until or While – **Loop – Evaluation***

The element will execute the loop action while or until completed and THEN process the corrective action, link to the next test node, or link to the maintenance task. The loop terminates by either a while evaluation (evaluations the condition before entering the loop and continues while the evaluation is "True") or until evaluation (evaluations the condition after entering the loop and continues until the evaluation is "True"). Note this loop can become an infinite loop, unless an additional condition is evaluated (i.e., stop after X number of loops).

ELEMENT USED IN: *<evaluate>*

CONTENT MODEL IS: ((*%statemanipulation_ent;*)*, ((*endcondition*, *loopaction*) | (*loopaction*, *endcondition*)), *then*)

OPTIONAL ATTRIBUTE(S)

id   An identifier of the element which is assigned at origination and which remains unchanged as the document is revised or updated even though the automatically assigned enumeration or manually-assigned "labels" change (in some cases many times). The value of the "id" is used when making references to the element from other portions of the document. If no ID is given, none will be maintained and the element can then not be cross-referenced by means of an IDREF on another element or with local linking element.

DECLARED VALUE: ID

<loopaction>   *Actions Performed – **Loop – Evaluation***

The element evaluates inputs from BIT/BITE or user interaction. During the looping action, the end condition is set from BIT/BITE result, user input, or state (variable) information is set (usually to avoid infinite loops by counting number of iterations).

ELEMENT USED IN: *<loop>, and <loopfor>*

CONTENT MODEL IS: (*proc*, (*%statemanipulation_ent;* | *diagnostic_group* | *%dialog_ent;*)+)

<loopfor>   *For – **Loop – Evaluation***

The element will execute the loop action a specified number of iterations and THEN process the corrective action, link to the next test node, or link to the maintenance task. The counter is initialized, how much

MIL-STD-2361D PRODUCTION XML DTD V4.10
Element Definition
L

to increment the counter each iteration, and end counter terminates accomplished through an expression (i.e., counter<10).

ELEMENT USED IN:	*<evaluate>*
CONTENT MODEL IS:	((*%statemanipulation_ent;*)*, *initialcount*, *increment*, *end-condition*, *loopaction*, *then*)

OPTIONAL ATTRIBUTE(S)

id	An identifier of the element which is assigned at origination and which remains unchanged as the document is revised or updated even though the automatically assigned enumeration or manually-assigned "labels" change (in some cases many times). The value of the "id" is used when making references to the element from other portions of the document. If no ID is given, none will be maintained and the element can then not be cross-referenced by means of an IDREF on another element or with local linking element.
DECLARED VALUE:	ID

<low-bound>	*Fill-in Lower Boundary – **Dialog Box***

The minimum input value that is acceptable for Fill-in Dialog Box.

ELEMENT USED IN:	*<double-bound>, and <numrange>*
CONTENT MODEL IS:	(*integer* | *real* | *variableref* | *expression*)

<lruthry>	*Line Replaceable Unit – **Theory of Operation***

Identifies line replaceable units' theory of operation; an LRU is a component or unit removed at the Unit or Organizational level.

ELEMENT USED IN:	*<ssysthry>, and <systhry>*
CONTENT MODEL IS:	(*%titldtext;*)

OPTIONAL ATTRIBUTE(S)

nomen	Specifies the nomenclature of the equipment.
DECLARED VALUE:	Any character
nsn	Specifies the national stock number of the equipment.
DECLARED VALUE:	Any character
%bodyidatt;	Any of the attributes in the associated attribute set may be used with this element. Refer to bodyidatt for a complete description.

MIL-STD-2361D PRODUCTION XML DTD V4.10

OPTIONAL ATTRIBUTE(S)

%graphicunit;   Any of the attributes in the associated attribute set may be used with this element. Refer to graphicunit for a complete description.

\<map.coord\>   *X and Y Coordinate – **Hot Spot Mapping – Graphic***

Defines a hot spot coordinate (X, Y location) on an illustration. Coordinate 0,0 is measured from the lower left-hand corner of the illustration. Using multiple hot spot coordinations to create layovers shapes for linking callouts and/or part information to illustration index numbers or part.

ELEMENT USED IN: *\<map.circle\>, \<map.polygon\>, and \<map.rectangle\>*

CONTENT MODEL IS: EMPTY

REQUIRED ATTRIBUTE(S)

x   X-axis (horizontal) coordinate in the specified measurement unit.
       DECLARED VALUE: Any character

y   Y-axis (vertical) coordinate in the specified measurement unit.
       DECLARED VALUE: Any character

OPTIONAL ATTRIBUTE(S)

%graphicunit;   Any of the attributes in the associated attribute set may be used with this element. Refer to graphicunit for a complete description.

MIL-STD-2361D PRODUCTION XML DTD V4.10
Element Definition
M

\<map.polygon\>　　　　　　　*Polygon – **Hot Spot Mapping – Graphic***

Maps a polygon shape hot spot on an illustration, for frame-based presentation. The X and Y coordinates are the polygon's connectors in the order specified.

ELEMENT USED IN:　　*\<mapref\>*

CONTENT MODEL IS:　　(*map.coord*, *map.coord*+)

\<map.rectangle\>　　　　　　*Rectangle – **Hot Spot Mapping – Graphic***

Maps a rectangle hot spot on an illustration, for frame-based presentation. The coordinates are the rectangles lower-left and upper-right corners.

ELEMENT USED IN:　　*\<mapref\>*

CONTENT MODEL IS:　　(*map.coord*, *map.coord*)

\<mapref\>　　　　　　　　*Hot Spot Mapping – **Graphic***

The element marks on a graphic hot spot references to part information, etc. The hot spot reference can be a circle, rectangle, or polygon shape.

ELEMENT USED IN:　　*\<graphic\>*

CONTENT MODEL IS:　　(*map.circle* | *map.rectangle* | *map.polygon*)

REQUIRED ATTRIBUTE(S)

id　　　　An identifier of the element which is assigned at origination and which remains unchanged as the document is revised or updated even though the automatically assigned enumeration or manually-assigned "labels" change (in some cases many times). The value of the "id" is used when making references to the element from other portions of the document. If no ID is given, none will be maintained and the element can then not be cross-referenced by means of an IDREF on another element or with local linking element.

DECLARED VALUE:　ID

OPTIONAL ATTRIBUTE(S)

partref　　The illustration index number associated part information reference.
DECLARED VALUE:　ID Reference

label　　Information about the illustration index number. (i.e. part name, NSN, etc.).
DECLARED VALUE:　Any character

refdes　　Reference designator about the illustration index number.
DECLARED VALUE:　Any character

acknowledge   Does the note require acknowledgement from the user?
    DECLARED VALUE: "yes" or "no"

    DEFAULT VALUE =   no

%bodyidatt;   Any of the attributes in the associated attribute set may be used with this element. Refer to bodyidatt for a complete description.

\<notices\>   *Official Notices*

This element contains any notices that appear on the TM front cover, change sheet, or title block page.

ELEMENT USED IN: *\<chgsheet\>, \<frntcover\>, \<frntcover_abbreviated\>, and \<titleblk\>*

CONTENT MODEL IS: (*avail*?, *super*?, *dist*, *export*?, *destr*?, *general_purpose_notices**)

\<nsn\>   *National Stock Number*

The element identifies the item's national stock number (NSN). The NSN is broken into the Federal Stock Classification (FSC) Code (the first four-digits) and National Item Identification Number (NIIN) (the last nine-digits).

ELEMENT USED IN: *\<aal-entry\>, \<applic\>, \<bii-entry\>, \<bii-opt-entry\>, \<coei-entry\>, \<coei-opt-entry\>, \<compchklist\>, \<coverpage\>, \<expdur-entry\>, \<material-list\>, \<mrpl-entry\>, \<nsnindxrow\>, \<pi.item\>, \<sysnomen\>, \<systemnomen\>, \<teref-group\>, \<titlepg\>, and \<tool-entry\>*

CONTENT MODEL IS: (*fsc*, *niin*)

\<nsnindx\>   *Standard Information – **National Stock Number Index***

A cross reference listing of National Stock Number(s) (NSN) with illustration numbers and callout. In page-based, this element functions as the table element.

ELEMENT USED IN: *\<nsnindxwp\>*

CONTENT MODEL IS: (*nsnindxrow*+)

OPTIONAL ATTRIBUTE(S)

%bodyidatt;   Any of the attributes in the associated attribute set may be used with this element. Refer to bodyidatt for a complete description.

MIL-STD-2361D PRODUCTION XML DTD V4.10
Element Definition
N

<nsnindxrow> *Entry – **National Stock Number Index***

The element is the NSN index entry containing the figures where the NSN is used. In page-base, the element is equivalent to a "row" element in a table.

ELEMENT USED IN: *<nsnindx>*

CONTENT MODEL IS: (*nsn*, *callout*+)

OPTIONAL ATTRIBUTE(S)

%bodyidatt; Any of the attributes in the associated attribute set may be used with this element. Refer to bodyidatt for a complete description.

<nsnindxwp> *National Stock Number Index – **Work Package***

The National Stock Number (NSN) index work package contains an index that lists the NSNs and each referenced figure number, and item number in the parts information work packages. The NSN are sequenced by the National Item Identification Number (NIIN).

ELEMENT USED IN: *<pim>, and <systemhierarchy>*

CONTENT MODEL IS: (*wp.metadata*?, *wpidinfo*, *nsnindx*)

OPTIONAL ATTRIBUTE(S)

%wpatt; Any of the attributes in the associated attribute set may be used with this element. Refer to wpatt for a complete description.

<null> *Null*

The element specifically indicates the no content and marking is identified by it's attribute.

ELEMENT USED IN: *<initial_setup>, and %misc;*

CONTENT MODEL IS: EMPTY

OPTIONAL ATTRIBUTE(S)

insert Specifies what material is inserted in the table cell containing the null element, i.e., "NA," "NR," a long dash, classified status, or no insertion.

DECLARED VALUE: List (NA | NR | dash | secure | none)

DEFAULT VALUE = none

MIL-STD-2361D PRODUCTION XML DTD V4.10
Element Definition
N

\<numrange\>   *Number Range – **Fill-In – Dialog Box***

The element specifies the inputted value must be equal or between the numeric range. The options are minimum value or higher, maximum value or lower, and between the minimum and maximum values.

ELEMENT USED IN: *\<fillin\>*

CONTENT MODEL IS: (*low-bound* | *double-bound* | *high-bound*)

MIL-STD-2361D PRODUCTION XML DTD V4.10
Element Definition
O

\<o\>   *Field Service/AMC Hours – **2 Maintenance***
Level – Maintenance Allocation Chart

Grouping of the work time for field service or AMC (aviation only) maintenance level (O). In page-base, the element is equivalent to an "entry" element in a table.

ELEMENT USED IN: *<avmaintclass-2lvl>*

CONTENT MODEL IS: (#PCDATA

\<odsdata\>   *Ozone Depleting Substances Statement – **General Information***

A listing of the ozone depleting substances that are prohibited.

ELEMENT USED IN: *<ginfowp>*

CONTENT MODEL IS: (*%titldtext;*)

OPTIONAL ATTRIBUTE(S)

%bodyidatt;   Any of the attributes in the associated attribute set may be used with this element. Refer to bodyidatt for a complete description.

\<oipitem\>   *Entry – **Overhaul Inspection Procedure***

The element is each Overhaul Inspection Procedure entry. A Quality Assurance (QA) acronym is display as the first item to identify the characteristics has a major qualify assurance effect. In page-base, the element is equivalent to a "row" element in a table.

ELEMENT USED IN: *<oiptab>*

CONTENT MODEL IS: (*itemno*, *callout*?, *desc*, *insp-method*, *actionreq*)

OPTIONAL ATTRIBUTE(S)

%applidatt;   Any of the attributes in the associated attribute set may be used with this element. Refer to applidatt for a complete description.

%qa;   Any of the attributes in the associated attribute set may be used with this element. Refer to qa for a complete description.

\<oiptab\>   *Standard Information – **Overhaul Inspection Procedures***

This element contains the overhaul inspection procedures list items.

ELEMENT USED IN: *<oipwp>*

CONTENT MODEL IS: (*title*, (*%alert;*, *oipitem*)+)

%wpatt;   Any of the attributes in the associated attribute set may be used with this element. Refer to wpatt for a complete description.

<or>   *Or – **Boolean – Evaluation***

The Boolean "OR" function returns a "True" value if one or the other expressions are "True", otherwise returns "False" if both expressions are "False".

ELEMENT USED IN: *%binop;*

CONTENT MODEL IS: EMPTY

<origin>   *Point of Origin – **Logic Tree – Troubleshooting***

The element is used for the logical procedural table/diagram point of origin in a troubleshooting procedure. The element is the same as logical test block, but with no linkage with any previous logical test blocks. This element contains test procedures, which lead to an indication or condition. Based on the indication or condition, a response is provided to determine the next action.

ELEMENT USED IN: *<logicproc>*

CONTENT MODEL IS: (*%alert;*, *test*+, *indication*, *answer*, *answer*+)

REQUIRED ATTRIBUTE(S)

branchto   References identifier(s) of branch or branches to which the user should proceed, which may depend on the outcome of any test or procedure at point of origin.

DECLARED VALUE: ID Reference (one or more)

MIL-STD-2361D PRODUCTION XML DTD V4.10
Element Definition
O

---

origin
Specifies unique identifier of the path beginning at the origin.
  DECLARED VALUE: ID

OPTIONAL ATTRIBUTE(S)

branchlabel
Supplies an explicit reference to a branch.
  DECLARED VALUE: Any character

type
Specifies the logical value associated with the current element. This value may be displayed in either paper or electronic display
  DECLARED VALUE: List (yes | no | pass | fail | true | nottrue | value | unantic (unanticapted))

valueloc
Specifies the location (usually other properties) which supplies the value of the current property.
  DECLARED VALUE: Name (one or more)

valuetype
Specifies the form of the value in any value-related attribute.
  DECLARED VALUE: List (boolean, string, real, integer, float, sequence, set, nil, input, outcome)

value
Supplies an alphanumeric or numeric value if attribute "type" is "value".
  DECLARED VALUE: Any character

\<orsch\>   *Overhaul and Retirement Schedule – Maintenance Task*

A maintenance task containing a list of equipment and their overhaul/retirement schedule.

ELEMENT USED IN: *\<orschwp\>*

CONTENT MODEL IS: (*title*, *intro*, *orsch.tab*)

OPTIONAL ATTRIBUTE(S)

%taskatt;   Any of the attributes in the associated attribute set may be used with this element. Refer to taskatt for a complete description.

\<orsch.entry\>   *Entry – Overhaul and Retirement Schedule*

The overhaul and retirement schedule entry contains the part name and number, overhaul interval, and retirement interval. In page-base, the element is equivalent to a "row" element in a table.

ELEMENT USED IN: *\<orsch.tab\>*

CONTENT MODEL IS: (*name*, *orsch.interval.entry*+)

OPTIONAL ATTRIBUTE(S)

%applidatt;   Any of the attributes in the associated attribute set may be used with this element. Refer to applidatt for a complete description.

Page – 326

\<part.breakdown.ref\>   *Next Lower Functional Group Reference – **Parts Information***

The element is used to reference the next lower level functional group the part item. A RPSTL (Repair Parts, Kits, or Special Tool Parts) list Work Package would be created for each lower functional group. The element references the RPSTL list Work Package attribute wpno, thus providing the ability to display the other functional group parts' information and figure, and produce complete RPSTL page-base output.

ELEMENT USED IN: *\<pi.item\>*

CONTENT MODEL IS: EMPTY

REQUIRED ATTRIBUTE(S)

idref   Reference to the associated part list work package identifier.
   DECLARED VALUE: ID Reference

\<partcage\>   *Part Number and CAGEC Group – **Tool Identification***

The element groups the part number and CAGEC for when a tool has multiple numbers.

ELEMENT USED IN: *\<tool-entry\>*

CONTENT MODEL IS: (*partno*, *cageno*)

OPTIONAL ATTRIBUTE(S)

%refs;   Any of the attributes in the associated attribute set may be used with this element. Refer to refs for a complete description.

\<partdesc\>   *Part Description – **Illustration of Manufactured Parts***

The element includes either the part number and optional drawing number reference; or the drawing number reference, and manufactured part nomenclature. In page-base, the element is equivalent to a "row" element in a table.

ELEMENT USED IN: *\<bdar-manuitem\>, \<manuindx\>, and \<manuitem\>*

CONTENT MODEL IS: (((*partno*, *cageno*, *dwgno*?) | *dwgno*), *name*)

\<partno\>   *Part Number*

The element is the commercial part number.

ELEMENT USED IN: *\<compchklist\>, \<coverpage\>, \<csi-entry\>, \<dcpno\>, \<expdur-entry\>, \<fncgrp\>, \<material-list\>, \<mrpl-entry\>, \<partcage\>, \<partdesc\>, \<pi.item\>, \<pnindxrow\>, \<sysnomen\>, \<titlepg\>, \<tool-entry\>, and %partid;*

OPTIONAL ATTRIBUTE(S)

    %refs;   Any of the attributes in the associated attribute set may be used with this element. Refer to refs for a complete description.

\<pecul.insp-entry\>   *Entry – **Checking Unpacked Equipment Components***

The element is an item entry for Checking Unpacked Equipment Components. The element contains the inspection item locations, inspected item , and procedure how to inspect and any actions. In page-base, the element is equivalent to a "row" element in a table.

ELEMENT USED IN: *\<pecul.insp-group\>*

CONTENT MODEL IS: (*eqpitem*, *pecul.step-entry*+)

OPTIONAL ATTRIBUTE(S)

    %applidatt;   Any of the attributes in the associated attribute set may be used with this element. Refer to applidatt for a complete description.

\<pecul.insp-group\>   *Component/Assemble Grouping – **Checking***
Unpacked Equipment Components

The element groups the Checking Unpacked Equipment Components requirements for each component/assemble to be inspected. In page-base, the element is equivalent to a "row" element in a table.

ELEMENT USED IN: *\<pecul.insp.tab\>*

CONTENT MODEL IS: (*compassem*, *pecul.insp-entry*+)

OPTIONAL ATTRIBUTE(S)

    %applidatt;   Any of the attributes in the associated attribute set may be used with this element. Refer to applidatt for a complete description.

\<pecul.insp.tab\>   *Standard Information – **Checking Unpacked Equipment Components***

The element contains the required elements for the Checking Unpacked Equipment Components standard information for equipment components used in checking unpacked equipment. In page-based, this element functions as the table element.

ELEMENT USED IN: *%chkeqpstdinfo;*

CONTENT MODEL IS: (*title*, *pecul.insp-group*+)

R

OPTIONAL ATTRIBUTE(S)

%wpatt; Any of the attributes in the associated attribute set may be used with this element. Refer to wpatt for a complete description.

\<releaseagent\> *Controlling DoD Office – **Distribution Reason – Notice***

The controlling DoD office for deciding the distribution statement level and request for further distribution.

ELEMENT USED IN: *\<b.statement\>, \<c.statement\>, \<d.statement\>, \<e.statement\>, \<f.statement\>, and \<x.statement\>*

CONTENT MODEL IS: (#PCDATA

\<remark-group\> *Entry – **Remark – Maintenance Allocation Chart***

The element is an entry for each MAC remark (by code and remark text). In page-base, the element is equivalent to a "row" element in a table.

ELEMENT USED IN: *\<remarktab\>*

CONTENT MODEL IS: (*remarkcode*, *remarks*)

\<remarkcode\> *Code – **Remark – Maintenance Allocation Chart***

The element enumerates each remark made in the MAC and is remark reference key in the MAC. In page-base, the element is equivalent to an "entry" element in a table.

ELEMENT USED IN: *\<remark-group\>*

CONTENT MODEL IS: (#PCDATA

REQUIRED ATTRIBUTE(S)

id An identifier of the element which is assigned at origination and which remains unchanged as the document is revised or updated even though the automatically assigned enumeration or manually-assigned "labels" change (in some cases many times). The value of the "id" is used when making references to the element from other portions of the document. If no ID is given, none will be maintained and the element can then not be cross-referenced by means of an IDREF on another element or with local linking element.

DECLARED VALUE: ID

Page – 368

MIL-STD-2361D PRODUCTION XML DTD V4.10
Element Definition
R

\<remarkref\>   *Remark Reference – **Maintenance Allocation Chart***

The element references a remark item in the MAC remark standard information.

ELEMENT USED IN: *\<remarkrefs\>*

CONTENT MODEL IS: EMPTY

REQUIRED ATTRIBUTE(S)

  refs   References the remark code from the MAC remark table.
    DECLARED VALUE: ID Reference

\<remarkrefs\>   *Group Remark Reference – **Maintenance Allocation Chart***

The element is the remark(s) entry in the MAC. In page-base, the element is equivalent to an "entry" element in a table.

ELEMENT USED IN: *\<avqualify-2lvl\>, and \<qualify-2lvl\>*

CONTENT MODEL IS: (*remarkref*+)

\<remarks\>   *Remarks*

The element is used to enter any additional remarks.

ELEMENT USED IN: *\<pecul.step-entry\>, and \<remark-group\>*

CONTENT MODEL IS: (*%text_ent;*)*

OPTIONAL ATTRIBUTE(S)

  %bodyidatt;   Any of the attributes in the associated attribute set may be used with this element. Refer to bodyidatt for a complete description.

\<remarktab\>   *Standard Information- Remark – **Maintenance Allocation Chart***

Remarks pertinent to maintenance functions as listed in the MAC are contained in the remarks standard information. In page-based, this element functions as the table element.

ELEMENT USED IN: *\<macwp\>*

CONTENT MODEL IS: (*title*, *remark-group*+)

OPTIONAL ATTRIBUTE(S)

  %bodyidatt;   Any of the attributes in the associated attribute set may be used with this element. Refer to bodyidatt for a complete description.

MIL-STD-2361D PRODUCTION XML DTD V4.10

\<size\>   *String Length* – ***String Function***

Returns an integer number for the characters in the string.

ELEMENT USED IN: *%unop;*

CONTENT MODEL IS: EMPTY

\<sling\>   *Sling Loading* – ***Maintenance Task***

A maintenance task for lifting or moving equipment by using a sling. Complies with MIL-STD-209and includes all safety requirements.

ELEMENT USED IN: *\<maintsk\>*

CONTENT MODEL IS: (*proc*)

OPTIONAL ATTRIBUTE(S)

  %taskatt;   Any of the attributes in the associated attribute set may be used with this element. Refer to taskatt for a complete description.

\<smr\>   *Source Maintenance Recovery Code* – ***Parts Information***

SMR Code contains supply/requisitioning information, maintenance level authorization criteria, and disposition instruction. In page-base, the element is equivalent to an "entry" element in a table.

ELEMENT USED IN: *\<fncgrp\>, and \<pi.item\>*

CONTENT MODEL IS: EMPTY

REQUIRED ATTRIBUTE(S)

  sourcecode   First two positions. How to get an item.
    DECLARED VALUE: Any character

  maintcode   Third and fourth position. Third position is who can install, replace, or use the item. Fourth position is who can do complete repair on the item.
    DECLARED VALUE: Any character

  recovercode   Fifth position. Who determines disposition action on unserviceable items.
    DECLARED VALUE: Any character

OPTIONAL ATTRIBUTE(S)

  service   Specifies the service branch.
    DECLARED VALUE: List (army | navy | AF | marine | CG)
    DEFAULT VALUE =   army

\<spanspec\>   *Spanning Specification –* **CALS Table**

Define each horizontal column spanning and proved a spanning name.

ELEMENT USED IN: *\<tgroup\>*

CONTENT MODEL IS: EMPTY

REQUIRED ATTRIBUTE(S)

nameend   Specifies name of the right most column of span. Names are identified
in *\<colspec\>* of the current *\<tgroup\>*.
DECLARED VALUE: Any character

namest   Specifies name of the left most column of span; can be used in
combination with "nameend" as an alternative to "spanname." Names
are identified in *\<colspec\>* of the current *\<tgroup\>*.
DECLARED VALUE: Any character

spanname   Specifies name of the spanned columns, used to specify the position in a row.
DECLARED VALUE: Any character

OPTIONAL ATTRIBUTE(S)

align   Specifies the horizontal alignment of content within the span specification.
DECLARED VALUE: List (left | right | center | justify | char)

DEFAULT VALUE =   center

char   For align="char," the value is the single alignment character around
which the entry is aligned; the first occurrence of the character is
used as the alignment point. Entries not containing this character
are aligned to the left of this position.
DECLARED VALUE: Any character

DEFAULT VALUE =   ' ' (no character) (defined to ensure that the high-level default
will not affect lower levels of the table)

charoff   For align="char," horizontal character offset is the percent of the current
column width to the left of the (left edge of the) alignment character.
DECLARED VALUE: Any character

colsep   Default for all items in this span specification. If one, display the internal
column vertical rulings to the right of each item; if zero, do not display
it. Ignored for the last column, where the frame setting applies.
DECLARED VALUE: List (0 | 1)

rowsep   Default for all items in this span specification (within the enclosing
group) of the table. If one, display the internal vertical row ruling below

MIL-STD-2361D PRODUCTION XML DTD V4.10
Element Definition
S

---

each item. If zero, do not display it. Ignored for the last row of the table, since overridden by the table frame setting.

DECLARED VALUE: List (0 | 1)

\<spec_hazards\>   *Protection Against Specific Hazards –* ***DMWR Ammunition Introduction***

Specific hazards are listed in each applicable operation for the ammunition and materials requiring protection against the specific hazards.

ELEMENT USED IN: *\<dmwr_introwp\>*

CONTENT MODEL IS: (*para0*+)

\<specauth\>   *Specific Authority –* ***Distribution Reason – Notice***

Indicates the distribution statement restriction reason as the Specific Authority and is defined as to protect information not specifically included in the above reasons and discussions, but which requires protection in accordance with valid documented authority such as Executive Orders, classification guidelines, DoD or DoD Component regulatory documents. The selected distribution reason is generated through the stylesheet.

ELEMENT USED IN: *%commondistreason;*

CONTENT MODEL IS: (#PCDATA

REQUIRED ATTRIBUTE(S)

distreason   Distribution reason text for the distribution statement.
DECLARED VALUE: Any character

DEFAULT VALUE =   Specific Authority

\<specenv\>   *Special Environmental Conditions –* ***Initial Setup***

Then element contains all the special environmental conditions required to perform the procedures contained in the work package.

ELEMENT USED IN: *\<initial_setup\>, and %opteqpconds;*

CONTENT MODEL IS: (*specenv-setup-item*+)

\<specenv-setup-item\>   *Special Environmental Conditions Setup Item –* ***Initial Setup***

The element is an entry for each special environmental conditions item.

DECLARED VALUE:	"yes" or "no"
DEFAULT VALUE =	no

\<state\> *State – Address*

The element is the state in the address block.

ELEMENT USED IN: *\<address\>, \<chgsheet\>, and \<titleblk\>*

CONTENT MODEL IS: (#PCDATA

OPTIONAL ATTRIBUTE(S)

%changelevel;	Any of the attributes in the associated attribute set may be used with this element. Refer to changelevel for a complete description.

\<statemanipulation\> *State (Variable) Information Manipulation – Expression*

The element performs three state information functions:

1. Initialize a state (variable) information by defining the name, type, scope, etc. (state (variable) informations must be declared before they can be assigned a value.)

2. Initialize a state (variable) information and assign a value through an expression.

3. Assign a value to a previously defined state (variable) information reference.

When a precondition exists, the element is only executed if the condition is true.

ELEMENT USED IN: *\<statemanipulation-alt\>, and %statemanipulation_ent;*

CONTENT MODEL IS: (*precond*?, (*variable* | (*variableref*, (*fault* | *date-time_stamp* | *expression*))))

OPTIONAL ATTRIBUTE(S)

id	An identifier of the element which is assigned at origination and which remains unchanged as the document is revised or updated even though the automatically assigned enumeration or manually-assigned "labels" change (in some cases many times). The value of the "id" is used when making references to the element from other portions of the document. If no ID is given, none will be maintained and the element can then not be cross-referenced by means of an IDREF on another element or with local linking element.
DECLARED VALUE:	ID

<tabdata>   *Tabulated Data – DMWR Ammunition Introduction*

Reference are made to the Tabulated Data, Military Specifications, and Drawings Work Package for the tabulated data.

ELEMENT USED IN: *<dmwr_introwp>*

CONTENT MODEL IS: (*para0*+)

OPTIONAL ATTRIBUTE(S)

   %bodyidatt;   Any of the attributes in the associated attribute set may be used with this element. Refer to bodyidatt for a complete description.

<table>   *CALS Table*

A table, which will consist at the least of a title *<title>*, table group *<tgroup>*, table body *<tbody>*, row *<row>* s, and entry *<entry>* s.

ELEMENT USED IN: *<bdar-manuitem>, <blank_form>, <damage-assesswp>, <faultreports>, <figure>, <item>, <loaddesc>, <manuitem>, <messageindx>, <oipwp>, <para>, <pmi-cklistwp>, <pms-inspecwp>, <pshopchk.tab>, <subfig>, <table-alt>, %figtab;, and %referencetype;*

CONTENT MODEL IS: (*precond*?, *title*?, *tgroup*+)

OPTIONAL ATTRIBUTE(S)

   tabstyle   A unique table style defined in the stylesheet that applies to the current table.
     DECLARED VALUE: Name Token

   %stdinfoatt;   Any of the attributes in the associated attribute set may be used with this element. Refer to stdinfoatt for a complete description.

   frame   Ruling around the table as top only, bottom only, top and bottom, sides, all, or none.
     DECLARED VALUE: List (top | bottom | topbot | all | sides | none)

   colsep   Default for all items in this table. If one, display the internal column vertical rulings to the right of each item; if zero, do not display it. Ignored for the last column, where the frame setting applies.
     DECLARED VALUE: List (0 | 1)

   rowsep   Default for all items in this column of the table. If one, display the internal horizontal row ruling below each item. If zero, do not display it. Ignored for the last row of the table, since the setting is overridden by the frame setting.
     DECLARED VALUE: List (0 | 1)

   orient   Orientation of the entire table.
     DECLARED VALUE: List (port (table writing direction, along rows, is parallel to the short side of page), or land (table writing direction is parallel to the long side of page).)

Element Definition
T

---

label	Table number for style sheets that can not auto-generate numbers.
DECLARED VALUE:	Any character

<table-alt>   *Conditional –* ***CALS Table***

The element provides multiple element options depending on the result from the precondition state (variable) information. Zero or one conditional element can be selected for any given condition.

ELEMENT USED IN: *<para>, and %figtab;*

CONTENT MODEL IS: (*table*+)

OPTIONAL ATTRIBUTE(S)

id   An identifier of the element which is assigned at origination and which remains unchanged as the document is revised or updated even though the automatically assigned enumeration or manually-assigned "labels" change (in some cases many times). The value of the "id" is used when making references to the element from other portions of the document. If no ID is given, none will be maintained and the element can then not be cross-referenced by means of an IDREF on another element or with local linking element.

DECLARED VALUE: ID

%secur;   Any of the attributes in the associated attribute set may be used with this element. Refer to secur for a complete description.

<tan>   *Tangent –* ***Mathematical Function***

This element performs the trigonometry function "TAN" on a integer or real number state (variable) information.

ELEMENT USED IN: *%trigop;*

CONTENT MODEL IS: EMPTY

<tanh>   *Tangent Hyperbolic –* ***Mathematical Function***

This element performs the trigonometry function "TANH" on a integer or real number state (variable) information.

ELEMENT USED IN: *%trigop;*

CONTENT MODEL IS: EMPTY

MIL-STD-2361D PRODUCTION XML DTD V4.10
Element Definition
T

\<taskcode\>   *Logistic Task Code – **Metadata***

The element identifies information about the task generated from the Logistic Support Analysis (LSA).

ELEMENT USED IN: *\<systemnomen\>*

CONTENT MODEL IS: (#PCDATA

\<tbody\>   *Body – **CALS Table***

The body of a table group; may be only table body *\<tbody\>* in the table or be multiple if there are multiple table group *\<tgroup\>* s. The columns specification *\<colspec\>* of the enclosing table group *\<tgroup\>* is the default specification for the enclosed table body *\<tbody\>*.

ELEMENT USED IN: *\<tgroup\>*

CONTENT MODEL IS: (*row*+)

OPTIONAL ATTRIBUTE(S)

  valign   Specifies the vertical alignment of content within the table body cells.
    DECLARED VALUE: List (top, middle (vertically centered), bottom)
    DEFAULT VALUE =   top

\<techdescwp\>   *Technical Information and Description – **Work Package***

A type of work package presenting technical description and other supporting information about a system or subsystem/assembly/component under test; it is presented in an independent section. Aviation Troubleshooting Technical Manual only.

ELEMENT USED IN: *\<systembreakdown\>, and \<troubleaviationcategory\>*

CONTENT MODEL IS: (*wp.metadata*?, *%wpsetup;*, ((*descproc*, *ctrlindproc*?, *thryproc*?) | (*ctrlindproc*, *thryproc*?) | *thryproc*))

OPTIONAL ATTRIBUTE(S)

  %wpatt;   Any of the attributes in the associated attribute set may be used with this element. Refer to wpatt for a complete description.

\<teref\>   *Tools and Equipment Reference – **Maintenance Allocation Chart***

A single reference to the corresponding tools and equipment (standard information) needed for the maintenance action.

ELEMENT USED IN: *\<terefs\>*

CONTENT MODEL IS: EMPTY

MIL-STD-2361D PRODUCTION XML DTD V4.10
Element Definition
T

REQUIRED ATTRIBUTE(S)

refs A reference to the tools and equipment list.
    DECLARED VALUE: ID Reference

\<teref-group\> *Entry – **Tools and Equipment Reference – Maintenance Allocation Chart***

The element is an entry for each tool referenced in the MAC. In page-base, the element is equivalent to a "row" element in a table.

ELEMENT USED IN: *\<tereqtab\>*

CONTENT MODEL IS: (*terefcode*, *maintenance*, *name*, *nsn*, *toolno*)

\<terefcode\> *Code – **Tools and Equipment Reference – Maintenance Allocation Chart***

The tools and equipment reference code (usually capital letter) that correlates to a reference code in the MAC. In page-base, the element is equivalent to an "entry" element in a table.

ELEMENT USED IN: *\<teref-group\>*

CONTENT MODEL IS: (#PCDATA

REQUIRED ATTRIBUTE(S)

id An identifier of the element which is assigned at origination and which remains unchanged as the document is revised or updated even though the automatically assigned enumeration or manually-assigned "labels" change (in some cases many times). The value of the "id" is used when making references to the element from other portions of the document. If no ID is given, none will be maintained and the element can then not be cross-referenced by means of an IDREF on another element or with local linking element.
    DECLARED VALUE: ID

\<terefs\> *Tools and Equipment References – **Maintenance Allocation Chart***

Reference(s) to the required tools and equipment for the maintenance task found in the tools and equipment standard information. In page-base, the element is equivalent to an "entry" element in a table.

ELEMENT USED IN: *\<avqualify-2lvl\>, and \<qualify-2lvl\>*

CONTENT MODEL IS: (*teref*+)

MIL-STD-2361D PRODUCTION XML DTD V4.10
Element Definition
T

\<tereqtab\>   *Standard Information –* ***Tools and Equipment References – Maintenance Allocation Chart***

The element is the tools and test equipment list, both special and common, required to maintain the equipment as indicated in the MAC. In page-based, this element functions as the table element.

ELEMENT USED IN: *\<macwp\>*

CONTENT MODEL IS: (*title*, *teref-group*+)

OPTIONAL ATTRIBUTE(S)

%bodyidatt;   Any of the attributes in the associated attribute set may be used with this element. Refer to bodyidatt for a complete description.

\<term\>   *Term –* ***List***

The element is term is a word, phrase, acronym, symbol, or abbreviation in a definition and legend list.

ELEMENT USED IN: *\<legend.item\>, \<term.def\>, and %linkdata;*

CONTENT MODEL IS: (*%format;* | *%linkref;*)*

OPTIONAL ATTRIBUTE(S)

idref   Reference a definition.
DECLARED VALUE: ID Reference

\<term.def\>   *Item –* ***Definition – List***

The element is an item contain a term and corresponding definition. The definition item requires an unique ID for referencing the term and definition in the narrative.

ELEMENT USED IN: *\<definitions\>, \<deflist\>, and %linkdata;*

CONTENT MODEL IS: (*term*, *def*)

OPTIONAL ATTRIBUTE(S)

id   An identifier of the element which is assigned at origination and which remains unchanged as the document is revised or updated even though the automatically assigned enumeration or manually-assigned "labels" change (in some cases many times). The value of the "id" is used when making references to the element from other portions of the document. If no ID is given, none will be maintained and the element can then not be cross-referenced by means of an IDREF on another element or with local linking element.
DECLARED VALUE: ID

<test>   *Test Procedure – **Logic Tree – Troubleshooting***

The element contains a series of steps and sub-steps that leads
to an indication or condition.

ELEMENT USED IN: *<maintsk>, <origin>, <testblock>, and %referencetype;*

CONTENT MODEL IS: (*proc*)

OPTIONAL ATTRIBUTE(S)

%bodyidatt;   Any of the attributes in the associated attribute set may be used with this
element. Refer to bodyidatt for a complete description.

<testblock>   *Test Block – **Logic Tree – Troubleshooting***

A test block contains a test consisting of steps , which lead to an indication
or condition. Based on these indications or conditions, a response is
provided (usually "Yes" or "No"). Depending on the response selected, a
test block or corrective action block is referenced to perform.

ELEMENT USED IN: *<logicproc>*

CONTENT MODEL IS: (*%alert;*, *test*+, *indication*, *answer*, *answer*+)

REQUIRED ATTRIBUTE(S)

branchto   References identifier(s) of branch or branches to which the user should proceed,
which may depend on the outcome of any test or procedure at point of origin.
  DECLARED VALUE: ID Reference (one or more)

branchfrom   References the identifiers of the branch or branches from which
the current branch has descended.
  DECLARED VALUE: ID Reference

type   Specifies the logical value associated with the current element. This value
may be displayed in either paper or electronic display.
  DECLARED VALUE: List (yes, no, pass, fail, true, nottrue, value, unantic (Unanticipated))

branch   References the identifier(s) of the branch containing the current testblock.
  DECLARED VALUE: ID

OPTIONAL ATTRIBUTE(S)

branchlabel   Supplies an explicit reference to a branch.
  DECLARED VALUE: Any character

valueloc   Specifies the location (usually other properties) which supplies
the value of the current property.
  DECLARED VALUE: Name (one or more)

MIL-STD-2361D PRODUCTION XML DTD V4.10
Element Definition
T

---

valuetype   Specifies the form of the value in any value-related attribute.
    DECLARED VALUE: List (boolean, string, real, integer, float, sequence, set, nil, input, outcome)

value   Supplies an alphanumeric or numeric value if attribute "type" is "value".
    DECLARED VALUE: Any character

\<testeqp\>   *Test Equipment – **Initial Setup***

The element is the test equipment list required to perform the procedures in the work package.

ELEMENT USED IN: *\<initial_setup\>*

CONTENT MODEL IS: (*testeqp-setup-item*+)

\<testeqp-setup-item\>   *Test Equipment Setup Item – **Initial Setup***

The element contains each test equipment nomenclature and reference item in test equipment list.

ELEMENT USED IN: *\<testeqp\>*

CONTENT MODEL IS: (*name*, *itemref*?)

OPTIONAL ATTRIBUTE(S)

%setupatt;   Any of the attributes in the associated attribute set may be used with this element. Refer to setupatt for a complete description.

\<testeval\>   *Test and Evaluation – **Distribution Reason – Notice***

Indicates the distribution statement restriction reason as the Test and Evaluation and is defined as to protect results of test and evaluation of commercial products or military hardware when such disclosure may cause unfair advantage or disadvantage to the manufacturer of the product. The selected distribution reason is generated through the stylesheet.

ELEMENT USED IN: *\<b.statement\>, and \<e.statement\>*

CONTENT MODEL IS: EMPTY

REQUIRED ATTRIBUTE(S)

distreason   Distribution reason text for the distribution statement.
    DECLARED VALUE: Any character

    DEFAULT VALUE =   Test and Evaluation

<tgroup>   *Group – CALS Table*

A table group within the larger table, which may contain a table head *<thead>*, table body *<tbody>*. Each *<tgroup>* effectively identifies a new portion of a table *<table>*. If a new columns specification *<colspec>* is provided, it replaces a previous one.

ELEMENT USED IN: *<table>*

CONTENT MODEL IS: (*colspec**, *spanspec**, *thead*?, *tbody*)

REQUIRED ATTRIBUTE(S)

cols   Specifies number of columns in the table group.
    DECLARED VALUE: Any character

OPTIONAL ATTRIBUTE(S)

align   Specifies the horizontal alignment of content within the column.
    DECLARED VALUE: List (left (flush left), center (centered), right (flush right), justify (both flush left and flush right), or char (align on leftmost of a specified character, positioned in column by charoff attribute).)

    DEFAULT VALUE =   left

char   For align="char," the value is the single alignment character around which the entry is aligned; the first occurrence of the character is used as the alignment point. Entries not containing this character are aligned to the left of this position.
    DECLARED VALUE: Any character

    DEFAULT VALUE =   ' ' (no character) (defined to ensure that the high-level default will not affect lower levels of the table)

charoff   For align="char," horizontal character offset is the percent of the current column width to the left of the (left edge of the) alignment character.
    DECLARED VALUE: Any character

    DEFAULT VALUE =   50

colsep   Default for all items in this table group. If one, display the internal column vertical rulings to the right of each item; if zero, do not display it. Ignored for the last column, where the frame setting applies.
    DECLARED VALUE: List (0 | 1)

rowsep   Default for all items in this table group. If one, display the internal horizontal row ruling below each item. If zero, do not display it. Ignored for the last row of the table, where the frame value applies.
    DECLARED VALUE: List (0 | 1)

MIL-STD-2361D PRODUCTION XML DTD V4.10
Element Definition
T

---

tgroupstyle	An attribute that allows for the case in which a table group style defined in the style sheet applies to the current table group.
DECLARED VALUE:	Name Token

<thead> *Heading – **CALS Table***

The heading information in a table *<table>*, which must be contained in a table group *<tgroup>* element. Headings are displayed at the top of the table *<table>* and again at the top of any continuation after a physical break between rows *<row>* in table body *<tbody>*.

ELEMENT USED IN: *<tgroup>*

CONTENT MODEL IS: (*colspec**, *row*+)

OPTIONAL ATTRIBUTE(S)

valign	Specifies the vertical alignment of content within the header.
DECLARED VALUE:	List (top | middle | bottom)
DEFAULT VALUE =	bottom

<then> *Then Perform Action – **Evaluation***

The element contains the actions after a evaluation has satisfied a condition (either If evaluated to "True" or a loop meet the terminating condition).

ELEMENT USED IN: *<elseif>, <if>, <loop>, and <loopfor>*

CONTENT MODEL IS: ((*resultwithstate*, *evaluate*?) \| *evaluate*)

<thryproc> *Procedure – **Theory of Operation***

This element contains information from the Theory of Operation to support troubleshooting procedures in a technical description work package.

ELEMENT USED IN: *<techdescwp>*

CONTENT MODEL IS: (*systhry*+)

OPTIONAL ATTRIBUTE(S)

%bodyidatt;	Any of the attributes in the associated attribute set may be used with this element. Refer to bodyidatt for a complete description.

MIL-STD-2361D PRODUCTION XML DTD V4.10
Element Definition
T

\<thrywp\>   *Theory of Operation –* ***Work Package***

Identifies a theory of operation work package that contains a functional description on how the equipment and its components function and interface. The LSA/MAC dictates the level of detail presented in this work package.

ELEMENT USED IN: *\<gim\>, \<overallsystem\>, and \<systembreakdown\>*

CONTENT MODEL IS: (*wp.metadata*?, *wpidinfo*, *intro*?, *systhry*+)

OPTIONAL ATTRIBUTE(S)

%wpatt;   Any of the attributes in the associated attribute set may be used with this element. Refer to wpatt for a complete description.

\<tim\>   *Troubleshooting –* ***Information Chapter***

The element contains all the troubleshooting information and procedures authorized to be performed at the stated maintenance level; a manual with more than one maintenance level may include a troubleshooting chapter or each level. There are nine types of work packages that may be included in the troubleshooting chapter(s): an introductory work package, an index to troubleshooting procedures work package , technical information and description work package, preshop analysis work package, component checklist work package, operational checkout and troubleshooting procedures work package , operational checkout work package, troubleshooting procedures work package, and intrusive diagnostic work package.

ELEMENT USED IN: *\<functionhierarchy\>, \<paper.manual\>, and \<sys-ts\>*

CONTENT MODEL IS: (*titlepg*, (*masterindexcategory* | *troublecategory* | *troubleaviationcategory* | *troubledmwrnmwrcategory*))

OPTIONAL ATTRIBUTE(S)

%imatt;   Any of the attributes in the associated attribute set may be used with this element. Refer to imatt for a complete description.

\<time.to.comp\>   *Estimated Time to Complete the Task –* ***Initial Setup***

An element contains the estimated time to complete the work package.

ELEMENT USED IN: *\<bdar-persn-item\>, \<initial_setup\>, and %optdwgreq;*

CONTENT MODEL IS: EMPTY

MIL-STD-2361D PRODUCTION XML DTD V4.10
Element Definition
T

REQUIRED ATTRIBUTE(S)

hrs   The estimated amount of hours to complete the operating task.
    DECLARED VALUE: Any character

OPTIONAL ATTRIBUTE(S)

applicable   Reference to the applicable configuration(s) specified in the WP identification information. When using an IETM that can filter information, this information is not presented when not applicable to the current configuration. Presentations that do not filter information, the information will be identified by the assigned associated abbreviation to designate applicability of the information.
    DECLARED VALUE: ID Reference (one or more)

\<times\>   *Multiplication – **Mathematical Function***

Return the value of the first number times the second number. The return value is a real unless both numbers are integers.

ELEMENT USED IN: *%binop;*

CONTENT MODEL IS: EMPTY

\<title\>   *Title*

\<work_planning\>   *Work Planning – **DMWR Ammunition Introduction***

Describes the accumulation of excess ammunition items, removal
of line rejects or explosive waste/hazardous waste, and removal
of items containing precious metals.

ELEMENT USED IN: *\<dmwr_introwp\>*

CONTENT MODEL IS: (*para0*+)

OPTIONAL ATTRIBUTE(S)

%bodyidatt;   Any of the attributes in the associated attribute set may be used with this
element. Refer to bodyidatt for a complete description.

\<wp.metadata\>   *Work Package Metadata*

Defines information about the work package. The work package
metadata specifies information as security classification, proponent,
change history, TM used in, effectivity, applicable system/subsystem,
keyword search list, and subject.

ELEMENT USED IN: *\<aalwp\>, \<ammowp\>, \<auxeqpwp\>, \<bdar-geninfowp\>, \<bdartoolswp\>,

\<wp.status\>   *Work Package Status – **Work Package Metadata***

Specifies the current status of the work package.

ELEMENT USED IN: *\<change.history\>*

CONTENT MODEL IS: EMPTY

MIL-STD-2361D PRODUCTION XML DTD V4.10
Element Definition
W

REQUIRED ATTRIBUTE(S)

type	Defines the work package status as new, changed, draft, deleted, and reinstated.
DECLARED VALUE:	List (new | changed | draft | deleted | reinstated)

\<wpidinfo\> *Work Package Identification Information*

Lists the identification information required for a work package.
Content: maintenance levels, work package title, configuration
effectivity, and supersedure notice.

ELEMENT USED IN: *\<aalwp\>, \<ammowp\>, \<auxeqpwp\>, \<bdar-geninfowp\>, \<bdartoolswp\>, \<bulk_itemswp\>, \<coeibiiwp\>, \<compchklistwp\>, \<csi.wp\>, \<ctrlindwp\>, \<damage-assesswp\>, \<descwp\>, \<destruct-introwp\>, \<destruct-materialwp\>, \<dmwr_introwp\>, \<dmwr_operationalreqwp\>, \<dmwr_qarwp\>, \<emergencywp\>, \<eqploadwp\>, \<explistwp\>, \<facilwp\>, \<gen.maintwp\>, \<genrepairwp\>, \<genwp\>, \<ginfowp\>, \<introwp\>, \<inventorywp\>, \<kitswp\>, \<lubewp\>, \<macintrowp\>, \<macwp\>, \<maintwp\>, \<manu_items_introwp\>, \<manuwp\>, \<mobilwp\>, \<mrplwp\>, \<nsnindxwp\>, \<oipwp\>, \<opcheck-tswp\>, \<opcheckwp\>, \<opunuwp\>, \<opusualwp\>, \<orschwp\>, \<perseqpwp\>, \<plwp\>, \<pm-ginfowp\>, \<pmcsintrowp\>, \<pmcswp\>, \<pmi-cklistwp\>, \<pmiwp\>, \<pms-ginfowp\>, \<pms-inspecwp\>, \<pnindxwp\>, \<pshopanalwp\>, \<qawp\>, \<refdesindxwp\>, \<refwp\>, \<stl_partswp\>, \<stlwp\>, \<storagewp\>, \<stowagewp\>, \<substitute-matwp\>, \<supitemwp\>, \<surwp\>, \<thrywp\>, \<toolidwp\>, \<torquewp\>, \<tsindxwp\>, \<tsintrowp\>, \<tswp\>, \<wiringwp\>, \<wtloadwp\>, %ammo_ent;, and %wpsetup;*

CONTENT MODEL IS: (*maintlvl*, *title*, *config*?)

\<wpno\> *Work Package Number*

The element reference the WP number to generate the WP sequence
number for change sheet and alphabetical index entry.

ELEMENT USED IN: *\<chghistory\>, \<chgwplist\>, \<indexentry\>, \<revisionsummary\>, and %wpatt;*

CONTENT MODEL IS: EMPTY

REQUIRED ATTRIBUTE(S)

wpref	Reference to the work package.
DECLARED VALUE:	ID Reference

OPTIONAL ATTRIBUTE(S)

%secur;	Any of the attributes in the associated attribute set may be used with this element. Refer to secur for a complete description.

X

\<x.statement\>   *Distribution X Statement – **Notice***

This tag will generate the DODD 5230.24 specified text for X restriction distribution technical manual. The selected distribution reason is generated through the stylesheet.

ELEMENT USED IN: *\<dist\>*

CONTENT MODEL IS: (*reasondate*, *releaseagent*)

\<xor\>   *Exclusive Or – **Boolean – Evaulation***

Returns a "True" value if one and only one boolean is "True", otherwise returns a "False" value.

ELEMENT USED IN: *%binop;*

CONTENT MODEL IS: EMPTY

\<xref\>   *Cross Reference – **Linkage***

The element is used to reference the work package sequence number, figure, table, step(s), etc., One or more of the reference targets can be used. The referenced information is generated by the style sheet.

ELEMENT USED IN: *\<checkstep\>, \<legend.item\>, %linkref;, and %localref;*

CONTENT MODEL IS: EMPTY

OPTIONAL ATTRIBUTE(S)

callout   Supplies the literal callout value.
DECLARED VALUE: Any character

itemno   The item number as text.
DECLARED VALUE: Any character

itemid   Reference the unique identifier of a item.
DECLARED VALUE: ID Reference

figid   References the unique identifier of a figure.
DECLARED VALUE: ID Reference

pagelocid   References the unique identifier of a page location.
DECLARED VALUE: ID Reference

posttext   Supplies any text that follows the cross reference when resolved for display.
DECLARED VALUE: Any character

MIL-STD-2361D PRODUCTION XML DTD V4.10

---

pretext   Supplies any text that precedes the cross reference when resolved for display.
   DECLARED VALUE: Any character

stepstart   References the unique identifier of a step, whether that is a single step
                                        reference or the start of a reference to a range of steps.
   DECLARED VALUE: ID Reference

stepend   References the unique identifier of the end step in a range of steps.
   DECLARED VALUE: ID Reference

tableid   References the unique identifier of a table.
   DECLARED VALUE: ID Reference

taskid   References the unique identifier of a task, such as "repair-
                                        replace" or "service upon receipt."
   DECLARED VALUE: ID Reference

tslocid   References the unique identifier of an object in a troubleshooting procedure.
   DECLARED VALUE: ID Reference

termdefid   References the unique identifier of a term and definition.
   DECLARED VALUE: ID Reference

wpid   References the unique identifier of a work package.
   DECLARED VALUE: ID Reference
