

NOTICE—When Government drawings, specifications, or other data are used for any purpose other than in connection with a definitely related Government procurement operation, the United States Government hereby incurs no responsibility, nor any obligation whatsoever; and the fact that the Government may have furnished, or in any way supplied, the said drawings, specifications, or other data is not to be regarded by implication or otherwise as in any manner licensing the holder or any other person or corporation, or conveying any right of permission to manufacture, use, or sell any patented invention that may in any way be related thereto.

This standard has been approved by the Bureau (Department of the Navy) and the Department of the USAF and is mandatory for use by that activity. All other military activities are required to employ this standard where suitable.

FED. SUP CLASS 3306												
<p>Head Marking: A circle of six (minimum) dots raised or depressed .010 maximum on size #8-32 and larger, location top surface of head. No marking required on sizes #6 and smaller.</p>  <p>M = Thread length. The length of the screw thread is measured from the extreme point to the last complete thread pitch.</p> <p>W = Screw Point Chamfer. The point shall be flat and chamfered. The flat shall be normal to the axis of the screw and the chamfer (W) shall be at an angle of 35° ±10°, -0° with the plane of the flat. The chamfer shall extend slightly below the root of the thread, and the edge between flat and chamfer shall be slightly rounded.</p> <p>X = X min represents the minimum length of external threads required for engagement with complete internal thread pitches. The element shall engage within this minimum length and meet requirements of MIL-P-18240. X min is equal to 5 thread pitches. X maximum equals the length of complete thread between Y and Z.</p> <p>Y = Y min shall have at least one pitch of complete thread. Y maximum equals 2 pitches of complete thread plus 2 pitches which includes the incomplete thread and chamfer. The locking element shall not be effective within the area of Y minimum.</p> <p>Z = Equals incomplete thread and/or extrusion angle permissible up to 2 thread pitches length maximum. The element or any machine holes or grooves for the element shall not penetrate this area.</p>

<p>(1) Threads shall be fully formed by any single rolling process and in accordance with Specification MIL-S-7742.</p> <p>(2) On short screws the complete (full formed) threads shall extend to within two thread pitch lengths of the head.</p> <p>(3) Based on 80,000 psi ultimate tensile strength, and stress area = <math>3.1416 (E - 3H)^2</math>. See Handbook H28 (1957)-Part I. (E - 16)</p> <p>(A) MATERIAL: Steel Corrosion Resisting; Procurement Specification FF-S-36 or Carpenter no. 10.</p> <p>TREATMENT: Passivated (See Procurement Specification).</p> <p>SURFACE ROUGHNESS: The surface of the shank, fillet and bearing area shall not exceed 125 RMS.</p> <p>(A) LOCKING ELEMENT: In accordance with Specification MIL-P-18240. Locking element area must pass thru a plain ring gage, equal to the maximum major thread diameter + .010, freely or with finger pressure.</p> <p>(A) MAGNETIC PERMEABILITY: These screws shall have a magnetic permeability of 2.0 max (Air=1.0) for a field of H=200 oersteds using a magnetic indicator per MIL-I-17214.</p> <p>DESIGN AND USAGE LIMITATIONS: See MS15981.</p> <p>DIMENSIONS: In inches.</p> <p>EXAMPLE OF PART NUMBER: MS21295-56 #1/4-28 Screw, 1 inch long.</p> <p>This standard takes precedence over documents referenced herein.</p> <p>Referenced documents shall be of the issue in effect on date of invitations for bid.</p>
