FED. SUP CLASS 6850

APPROVED 12 March 1965

## REQUIREMENTS:

The compound shall be a mixture of anhydrous alkaline salt detergents or alkalis including sodium metasilicate or sodium orthosilicate, a water insoluble powder possessing colloidal properties, and kerosene. The compound may also contain additional defoaming agent, solvent, and soluble inert inorganic salt. The product shall be non-dusting, and shall remain uniform in composition and show no evidence of segregation or caking during handling or storage.

## QUANTITATIVE REQUIREMENTS

## Characteristics

## Requirements

DIRECTIONS FOR USE:

- 1. Float type concentration is approximately 0.2 ounces per gallon.
- Digestant type concentration is approximately 0.5 ounces per gallon.
- 3. Best use concentration depends on type of paint over spray, ranging from 0.13 ounces per gallon for floation to 1 ounce per gallon for digestant type.
- 4. To prepare solution, the required quantity of compound should be dissolved in hot water in a small container outside the spray booth system, and the solution (with insoluble matter) transferred to the water curtain tank.
- Solution strength should be maintained by small daily additions based on alkalinity titrations.
- Foaming caused by some paints may be controlled by additions of one or two gallons of kerosene per 200 gallons of solution.
