FOREWORD

This catalog contains general guidance to the U.S. Navy Surface Fleet for cleaning products that are authorized by the Naval Sea Systems Command for use onboard U.S. Navy Surface Ships only. (Note: This catalog does not apply to U.S. Navy Submarines.) The catalog contains the following information: a list of authorized shipboard chemical cleaning products (concentrates and ready-to-use products) for general cleaning applications; precautions required for handling, stowage, and disposal of chemical cleaning products; containment requirements for chemical cleaning concentrates; and a list of authorized dispensing systems.

This publication consists of the following sections:

Chapter 1:	General Information and Safety Precautions
Chapter 2:	Authorized Cleaning Concentrates
Chapter 3:	Authorized Dispensing Systems
Chapter 4:	Authorized Ready-to-Use Cleaners
Chapter 5:	Authorized Dishwashing & Oven Cleaners
Chapter 6:	Authorized Miscellaneous Cleaners
Chapter 7:	Authorized Hand Soaps/Cleaners

Index

Ships, training activities, supply points, depots, Naval Shipyards, and Supervisors of Shipbuilding are requested to arrange for the maximum practical use and evaluation of NAVSEA technical manuals. All errors, omissions, discrepancies, and suggestions for improvement to NAVSEA technical manuals shall be reported to the Commander, NAVSURFWARCENDIV, 4363 Missile Way, Port Hueneme, CA 93043-4307 on NAVSEA/SPAWAR Technical Manual Deficiency/Evaluation Report (TMDER), NAVSEA Form 4160/1. To facilitate such reporting, copies of NAVSEA Form 4160/1 are included at the end of each bound part of each technical manual. All feedback comments shall be thoroughly investigated and originators will be advised of action resulting therefrom. Extra copies of NAVSEA Form 4160/1 may be requisitioned from DDSP Susquehanna PA, 05 E Street, Mechanicsburg, PA 17055-5003.

1.0 GENERAL INFORMATION AND SAFETY PRECAUTIONS

This chapter provides general information regarding the “U.S. Navy Surface Ship Authorized Chemical Cleaning Products and Dispensing Systems Catalog” and provides general safety precautions. This chapter includes a brief explanation of the methodology used to determine the acceptability of the cleaning products for shipboard use (authorization for use process). The safety precautions listed are general in nature and are intended to supplement specific manufacturers’ safety precautions, Material Safety Data Sheet (MSDS) recommendations, and product Warning Labels. (MSDS can be obtained from the Hazardous Material Information Resource System (HMIRS) website: <http://www.dlis.dla.mil.hmirs/>.) Each product listed in this catalog has been evaluated to determine proper handling and storage precautions. Precautions are identified in this catalogue by the use of a hazard symbol, as explained in this chapter. There are also brief discussions regarding required containment and enclosures for cleaning product dispensing systems. In addition, this chapter includes general guidance for obtaining price information for the cleaning products and dispensing systems.

1.1 Introduction

The intent of this catalog is to provide the following guidance to the Fleet:

- A list of cleaning concentrates and ready-to-use cleaning products authorized for use in general shipboard (surface ship only) applications. (These products were evaluated using information supplied by the manufacturers, based on environmental, health and safety (EHS) criteria. It was assumed that the information provided by the manufacturers was accurate and conformed to current market acceptability.)
- A list of authorized dispensing systems and associated products for each dispensing system
- Precautions required for handling, stowage, use, and disposal of chemical cleaning concentrates and diluted use concentrations.

1.2 Background

In order to determine what chemical cleaning products and dispensers would be authorized for use onboard U.S. Navy surface ships, an evaluation was conducted to: a) determine what types of shipboard cleaning products and dispensers are needed by Navy surface ships, b) formulate environmental, health and safety requirements necessary to protect Ship’s Force, the ship systems and equipment, and the environment, c) identify candidate commercial cleaning products for consideration as possible authorized

products, and d) evaluate the candidate cleaning products against the environmental, safety and health requirements. This evaluation was conducted by the Naval Surface Warfare Center, Carderock Division, Philadelphia, PA under the direction of Naval Sea Systems Command, with Navy Environmental Health Center (NEHC) support.

The evaluation revealed that numerous military specifications and commercial item descriptions (CIDs) for cleaning products had been previously canceled. As a result, it was deemed necessary to create Technical Purchase Descriptions (TPDs) for twelve different categories of cleaners and one TPD for dispensing systems. The TPDs are needed to ensure environmental, health and safety requirements are considered by manufacturers of products for each cleaning category. TPD requirements include materials/composition, listings of prohibited material/chemicals, relative toxicity, aquatic toxicity, biodegradability, pH, regulatory requirements and cleaning or removal efficiency. The cleaning categories covered by the new TPDs are as follows:

- Food Contact Sanitizer Concentrates
- Food Contact Sanitizer/Cleaner Concentrates
- Non-Food Contact Disinfectant/Cleaner Concentrates
- General Purpose Heavy-Duty Cleaner Concentrates
- Heavy-Duty Cleaner Concentrate for Machinery and Bilge Cleaners
- Floor Finish Restorer Concentrates
- Floor Stripper Concentrates
- Glass Cleaners (Concentrates and Ready-to-Use)
- Chemical Cleaning Dispensing Systems
- Ready-to-Use General Purpose Cleaners
- Authorized Dishwashing Products
- Authorized Miscellaneous Cleaners
- Authorized Hand Cleaners

Manufacturers were solicited to obtain product information for cleaning products and dispensers. Information received from manufacturers included Material Safety Data Sheets, Product Data Sheets, supporting documentation related to biodegradability and aquatic toxicity requirements, cleaning test results, and product brochures and literature. The manufacturers' product information was evaluated against the requirements of the appropriate TPD. The evaluation was based on the understanding that the information provided by the manufacturers was accurate and conformed to current market acceptability per TPD requirements. The products and dispensing systems that complied with the requirements of the TPDs were then authorized for surface ship use and are included in this catalog.

1.3 Safety Precautions

The review and evaluation of numerous cleaning concentrates revealed that most concentrates were found to have the following intrinsic characteristics:

- Concentrates, in general, were found to have a high pH and to be highly corrosive in nature;
- Concentrates, in general, contain one or more components that were toxic or harmful to the aquatic environment;
- Concentrates, in general, were found have less hazardous properties to the environment and the user when diluted in accordance with the manufacturers' recommended dilution-ratio; and
- Some glass cleaner concentrates were found to require special shipboard stowage due to combustion properties (low flash point, i.e., <140°F)

CAUTION

It is recommended that all cleaning concentrates be disposed of as Used/Excess Hazardous Materials and handled by Ship's Force using chemical workers goggles (also a full-length face shield if splashing could be a problem) and rubber gloves. Consult the product MSDS for specific guidance.

1.4 Hazard Symbols

Each product listed in this catalog was evaluated to determine appropriate shipboard storage and disposal requirements. These requirements are identified by the use of hazard symbols. The hazard symbols will be indicated in the "Precautions" column (if applicable) of the cleaning product information in the following chapters. Requirements for storage and/or disposal corresponding to each hazard symbol are provided in the list below.

Hazard	Hazard Symbol	Storage and/or Disposal Required (*)
Acidic	"A"	Special stowage required.
Aquatic Toxicity	"AT"	Special disposal required.

Corrosive	“C”	Special stowage required.
Flammable	“F”	Special storage required.
Hazardous Material	“HM”	Special disposal required

(*) Shipboard stowage and disposal of products associated with the above hazard designation shall be performed in accordance with the policy and guidance provided in OPNAVINST 5090.1B (Appendix L) and OPNAVINST 5100.19 series. Additional management guidance is provided in NSTM 593 “Pollution Control.”

1.5 Containment

Installation of containment provisions under/around dispensing systems is required to prevent concentrate spillage/leakage on deck surfaces. GSA Advantage provides “spill containment” equipment on their website: www.gsaadvantage.gov/. All containment equipment shall be obtained and installed upon installation of dispensing systems, prior to underway or deployment periods. Detailed spill control guidelines for cleaning products and concentrates are provided in the Hazardous Materials (HM) User’s Guide (HMUG), OPNAV P-145-110-03.

1.6 Dispensing System Enclosures

In order to prevent pilferage of concentrates or tampering of the dispensing systems dilution settings, all dispensing systems shall have a lock and key or similar tamper-resistant mechanism. If the dispensing system is not originally designed with this feature, a dispensing system enclosure is required

1.7 Pricing Information

Pricing information for cleaning products and dispensing systems is not provided in this catalog. For most cleaning compounds, current pricing information is available on the GSA Advantage website: www.gsaadvantage.gov/. If this website access is unavailable, manufacturers’ customer service numbers are provided in this catalog and should be used accordingly.

1.8 Website Access

An online version of this catalog is available on the GSA Advantage Website: www.gsaadvantage.gov/ under Authorized Shipboard Cleaning Products and Dispensers. It is also available on the Navy Shipboard Environmental Information Clearinghouse (Navy SEIC) website: <http://navyseic.dt.navy.mil>.

1.9 Technical Purchase Descriptions

Technical Purchase Descriptions or reference copies of the TPDs listed in this catalog may be obtained from Naval Surface Warfare Center, Carderock Division, Philadelphia Naval Business Center, Building 1000, Code 635, 5001 S. Broad Street, Philadelphia, Pennsylvania, 19112-5083, attention Ms. Socha, or Ms. Cipriano (e-mail address - sochacm@nswccd.navy.mil or ciprianob@nswccd.navy.mil). These TPDs may also be accessed on the Navy Shipboard Environmental Information Clearinghouse (NAVY SEIC) website: <http://navyseic.dt.navy.mil>.

1.10 Disposal

Shipboard handling, stowage, and disposal of cleaning products shall be performed as described by the applicable hazard symbol and in accordance with the policy and guidance provided in OPNAVINST 5090.1B (Appendix L) and OPNAVINST 5100.19 series. Additional management guidance is provided in Navy Standard Technical Manual (NSTM) 593 "Pollution Control" and also in the Hazardous Materials User's Guide (HMUG), OPNAV P-145-110-03.

1.11 Ordering Directives

In accordance with Chief of Naval Operations (CNO N4) policy, as referenced in Naval message 131755Z JAN 03, all Navy ships and shore installations are required to fully implement the Consolidated Hazardous Material Reutilization and Inventory Management Program (CHRIMP). In support of CHRIMP, ordering excessive quantities of cleaning concentrates for a specific application is strongly discouraged. Excessive quantities of concentrates will impact the following areas:

- Increase in HAZMAT disposal costs (Unused concentrates are required to be disposed of as HAZMAT),
- Decrease in shipboard stowage areas available for vital equipment/material from an already limited supply

1.12 Changing from one Dispensing System to another Manufacturer's Dispensing System

If Ship's Force is anticipating a change from one dispensing system to another system, they are requested to deplete the existing stock of concentrate prior to the changeover to the "new" product. This will allow maximum utilization of available cleaning products. In addition, depleting the existing stock will minimize the disposal of any unused cleaning products during the dispensing system changeover.

AUTHORIZED CHEMICAL CLEANING CONCENTRATES

The evaluation of submitted cleaning products and dispensing systems against the TPD requirements resulted in the authorization of the chemical cleaning concentrates listed in this chapter for use on U.S. Navy surface ships. The chemical cleaning applications discussed in this chapter are as follows:

- Food Contact Surface Sanitizer Concentrates (No Cleaning Properties)
- Food Contact Surface Sanitizer Concentrates with Cleaning Properties
- Non-Food Contact Surface Disinfectant Cleaner Concentrates
- General Purpose Heavy-Duty Cleaner Concentrates
- Machinery and Bilge Cleaners
- Floor Finish Restorer Concentrates
- Floor Stripper Concentrates
- Glass Cleaner Concentrates

2.1 Food Contact Surface Sanitizer Concentrates (No Cleaning Properties)

Products determined to comply with this product description and authorized for use on Navy surface ships are included in Table 2-1.

2.1.1 Product Description.

The cleaning products listed in this section are categorized as non-rinsing liquid or powder sanitizer concentrates only, containing quaternary ammonium compounds as the active ingredient. These sanitizing products have no cleaning properties. These sanitizers, when diluted in accordance with manufacturer's instructions, have been determined to effectively disinfect all **food contact surface types** and will kill 99.99 % of staph (*Staphylococcus aureus*), E-coli (*Escherichia coli*) and Salmonella.

2.1.2 Related Safety, Health, and Environmental Hazards

Due to the highly alkaline (caustic) nature and sanitizing properties of all sanitizer cleaners, the following precautions are required when handling sanitizer concentrates:

- Ensure that general ventilation is in operation in the vicinity where cleaning compounds are being used.

- Avoid skin or eye contact with sanitizer concentrates. If contact is made, flush affected area with water. Wear chemical workers goggles and rubber gloves when handling these concentrates. Consult the product MSDS for specific guidance.
- Avoid breathing mists, vapors, or dusts from these sanitizers. Keep containers closed when not in use. Prolonged and repeated exposure to sanitizer mists and vapors can irritate the nose, throat, or lungs.
- Use sanitizers only as prescribed on the container label. Ensure that the concentrate is diluted in accordance with the manufacturer's directions.
- DO NOT re-use empty sanitizer concentrate containers for any purpose other than to hold used or excess sanitizer. Manual pump spray bottles containing diluted product may be re-used after thorough rinsing with water.
- **All sanitizer concentrates shall be disposed of as Used/Excess Hazardous Materials (HM).** This disposal requirement does not pertain to unused or used solutions diluted in accordance with manufacturer's directions.
- If used in a dispensing system, the sanitizer concentrate shall only be used with the manufacturer-authorized dispenser. **The concentrate may not be used with another manufacturer's dispensing system.**
- If used in a dispensing system having a concentrate reservoir, a portable, temporary containment shall be installed under the reservoir to prevent accidental spills from leaking on surrounding decks.
- All sanitizers shall be used in a single dispensing system whereby only one product is dispensed to avoid cross contamination. Sanitizers **shall not be used in multi-product** dispensing systems.
- All empty plastic containers shall be carried to the solid waste room for disposal in the plastic waste processor (PWP) in accordance with Navy Ship Technical Manual (NSTM) 593, Pollution Control.

2.2 Food Contact Surface Sanitizer Concentrates with Cleaning Properties

Products determined to comply with this product description and authorized for use on Navy surface ships are included in Table 2-2.

2.2.1 Product Description

The cleaning products listed in this section are categorized as non-rinsing liquid sanitizer-cleaner concentrates containing quaternary ammonium compounds as the active ingredient. These sanitizer/cleaners, when diluted in accordance with manufacturer's instructions, have been determined to effectively disinfect and clean all **food contact surface types** and will kill 99.99 % of Staph (*Staphylococcus aureus*), E-coli (*Escherichia coli*) and Salmonella.

2.2.2 Related Safety, Health, and Environmental Hazards

Due to the highly alkaline (caustic) nature and sanitizing properties of all disinfectant cleaners, the following precautions are required when handling sanitizer cleaner concentrates:

- Ensure that general ventilation is in operation in the vicinity where cleaning compounds are being used.
- Avoid skin or eye contact with sanitizer cleaner concentrates. If contact is made, flush affected area with water. Wear chemical worker goggles and rubber gloves when handling these concentrates. Consult the product MSDS for specific guidance.
- Avoid breathing vapors or dusts from these sanitizers. Keep containers closed when not in use. Prolonged and repeated exposure to sanitizer vapors can irritate the nose, throat, or lungs.
- Use sanitizers only as prescribed on the container label. Ensure that the concentrate is diluted in accordance with the manufacturer's directions.
- DO NOT re-use empty sanitizer containers for any purpose other than to hold used or excess sanitizer. Manual pump spray bottles containing diluted product may be re-used after thorough rinsing.
- **All sanitizer cleaner concentrates shall be disposed of as Used/Excess HM.** This disposal requirement does not pertain to unused or used solutions diluted in accordance with manufacturer's directions.

- If used in a dispensing system, the sanitizer concentrate shall only be used with the manufacturer-authorized dispenser. **The concentrate may not be used with another manufacturer's dispensing system.**
- If used in a dispensing system having a concentrate reservoir, a portable, temporary containment shall be installed under the reservoir to prevent accidental spills from leaking on surrounding decks.
- All sanitizers shall be used in a single dispensing system whereby only one product is dispensed to avoid cross contamination. Sanitizers **shall not be used in multi-product** dispensing systems.
- All empty plastic containers shall be carried to the solid waste room for disposal in the plastic waste processor (PWP) in accordance with Navy Ship Technical Manual (NSTM) 593, Pollution Control.

1.3 Non-Food Contact Surface Disinfectant Cleaner Concentrates

Products determined to comply with this product description and authorized for use on Navy surface ships are included in Table 2-3.

2.3.1 Product Description

The cleaning concentrates listed in this section are categorized as non-abrasive disinfectant cleaner concentrates containing quaternary ammonium compounds as the active ingredient. These cleaners are authorized to clean porcelain fixtures such as **urinals, water closets, and sinks** in ship washrooms, showers, and heads. They may also be used to clean the **decks** in these spaces. These disinfectant cleaners when diluted in accordance with the manufacturers' instructions will effectively kill the following bacteria and fungus: *Staphylococcus aureus*, *Salmonella choleraesuis*, *Pseudomonas aeruginosa*, and *Trichophyton mentagrophytes* (athlete's foot)

2.3.2 Related Safety, Health, and Environmental Hazards

Due to the highly alkaline (caustic) nature and bactericide/fungicide properties of all disinfectant cleaners, the following precautions should be taken when handling disinfectant cleaner concentrates:

- Ensure that general ventilation is in operation in the vicinity where cleaning compounds are being used.
- Avoid skin or eye contact with disinfectant cleaner concentrates. If contact is made, flush affected area with water. Wear chemical worker goggles and rubber gloves when handling these concentrates. Consult the product MSDS for specific guidance.
- Avoid breathing mists and vapors from disinfectant cleaner concentrates. Keep containers closed when not in use.
- Use disinfectant cleaner concentrates only as prescribed on the container label. Ensure the concentrate is diluted in accordance with manufacturers' directions.
- DO NOT re-use empty cleaner concentrate containers for any purpose other than to hold used or excess detergent. Manual pump spray bottles containing diluted product may be re-used after thorough rinsing.

- **All disinfectant cleaner concentrates shall be disposed of as Used/Excess HM.** This disposal requirement does not pertain to unused or used solutions diluted in accordance with manufacturer's directions.
- If used in a dispensing system, the disinfectant cleaner concentrate shall only be used with the manufacturer-authorized dispenser. **The concentrate may not be used with another manufacturer's dispensing system.**
- If used in a dispensing system having a concentrate reservoir, a portable, temporary containment shall be installed under reservoir to prevent accidental spills from leaking on surrounding decks.
- All disinfectant cleaner concentrates shall be used in a single dispensing system whereby only one product is dispensed to avoid cross contamination. Disinfectant cleaner concentrates **shall not be used in multi-product** dispensing systems.
- All empty plastic containers shall be carried to the solid waste room for disposal in the plastic waste processor (PWP) in accordance with Navy Ship Technical Manual (NSTM) 593, Pollution Control.

1.4 General Purpose Heavy-Duty Cleaner Concentrates

Products determined to comply with this product description and authorized for use on Navy surface ships are included in Table 2-4.

2.4.1 Product Description

The cleaning concentrates listed in this section are categorized as general purpose, heavy-duty liquid concentrated cleaners suitable for removing heavy soils from hard surfaces, walls, painted surfaces, linoleum, asphalt, rubber, vinyl tile flooring, and other washable surfaces. These cleaners are suitable for manual cleaning or for use in automatic scrubbing machines.

2.4.2 Related Safety, Health, and Environmental Hazards

- Ensure that general ventilation is in operation in the vicinity where cleaning compounds are being used.
- Avoid skin or eye contact with detergent concentrate. If contact is made, flush affected area with water. Wear chemical worker goggles and rubber gloves when handling these concentrates. Consult the product MSDS for specific guidance.
- Avoid breathing mists and vapors from these concentrates.
- Use concentrated detergents only as prescribed on the container label. Ensure that the concentrate is diluted in accordance with the manufacturer's directions.
- **All general purpose heavy duty concentrates shall be disposed of as Used/Excess HM.** This disposal requirement does not pertain to unused or used solutions diluted in accordance with manufacturer's directions.
- If used in a dispensing system, the concentrate shall only be used with the manufacturer-authorized dispenser. **The concentrate may not be used with another manufacturer's dispensing system.**
- If used in a dispensing system having a concentrate reservoir, a portable, temporary containment shall be installed under the reservoir to prevent accidental spills from leaking on surrounding decks.

Pub. No. S6480-GA4-CAT-010

- All empty plastic containers shall be carried to the solid waste room for disposal in the plastic waste processor (PWP) in accordance with Navy Ship Technical Manual (NSTM) 593, Pollution Control.

1.5 Heavy-Duty Cleaner Concentrates for Machinery and Bilges

Products determined to comply with this product description and authorized for use on Navy surface ships are included in the following Tables 2-5 and 2-6.

2.5.1 Product Description

The cleaning concentrates listed in this section are categorized as Heavy-Duty Cleaner Concentrates intended for use on machinery and in bilge areas. All expended cleaning compound solutions used for this application are processed for overboard discharge through the shipboard oil/water separators. Some cleaning agents produce stable emulsions that prevent the proper operation of the oil/water separators and are therefore prohibited in this application. Only two cleaning compounds for machinery and bilge areas tested to date have proven to be compatible with the oil/water separators (these products are provided in Table 2-5). For future authorization of “proposed” cleaning concentrates for this application, test and evaluation studies shall be required to determine compatibility Navy oil/water separators. Authorized cleaners are water-based, non-toxic, biodegradable, and alkaline. These cleaners remove grease, oil, dirt, and wax from machinery and bilge areas. The cleaners are intended for use on most metal surfaces (including aluminum, brass, cadmium, copper, steel, magnesium, and stainless steel). Additionally, these cleaners can be used on painted and other finishes, glass, upholstery, plastic, and tires.

2.5.2 Related Safety, Health, and Environmental Hazards

- Ensure that general ventilation is in operation in the vicinity where cleaning compounds are being used.
- Avoid skin or eye contact with detergent concentrate. If contact is made, flush affected area with water. Wear chemical worker goggles and rubber gloves when handling these concentrates. Consult the product MSDS for specific guidance.
- Avoid breathing mists and vapors from these concentrates.
- Use concentrated detergents only as prescribed on the container label. Ensure that the concentrate is diluted in accordance with the manufacturer’s directions.
- **All machinery and bilge cleaning concentrates shall be disposed of as Used/Excess HM.** This disposal requirement does not pertain to unused or used solutions diluted in accordance with manufacturer’s directions.

Pub. No. S6480-GA4-CAT-010

- If used in a dispensing system, the concentrate shall only be used with the manufacturer-authorized dispenser. **The concentrate may not be used with another manufacturer's dispensing system.**
- If used in a dispensing system having a concentrate reservoir, a portable, temporary containment shall be installed under the reservoir to prevent accidental spills from leaking on surrounding decks.
- All empty plastic containers shall be carried to the solid waste room for disposal in the plastic waste processor (PWP) in accordance with Navy Ship Technical Manual (NSTM) 593, Pollution Control.

1.6 Floor Finish Restorer Concentrates

Products determined to comply with this product description and authorized for use on Navy surface ships are included in Table 2-7.

2.6.1 Product Description

The cleaning concentrates listed in this section are categorized as Floor Finish Restorer Concentrates suitable for removing heavy soils from walls, painted surfaces, linoleum, asphalt, rubber, vinyl tile flooring, epoxy colorflake decking, terrazzo decking, and other washable surfaces. These cleaners comply with shipboard requirements for a stable, homogenous, non-abrasive, concentrated, liquid, heavy-duty cleaner. These cleaners are not intended for use on non-skid or “stratica” tile decking systems unless otherwise specified herein.

2.6.2 Related Safety, Health, and Environmental Hazards

- Ensure that general ventilation is in operation in the vicinity where cleaning compounds are being used.
- Avoid skin or eye contact with detergent concentrate. If contact is made, flush affected area with water. Wear chemical worker goggles and rubber gloves when handling these concentrates. Consult the product MSDS for specific guidance.
- Avoid breathing mists and vapors from these concentrates.
- Use concentrated detergents only as prescribed on the container label. Ensure that the concentrate is diluted in accordance with the manufacturer’s directions.
- **All floor finish restorer concentrates shall be disposed of as Used/Excess HM.** This disposal requirement does not pertain to unused or used solutions diluted in accordance with manufacturer’s directions.
- If used in a dispensing system, the concentrate shall only be used with the manufacturer-authorized dispenser. **The concentrate may not be used with another manufacturer’s dispensing system.**
- If used in a dispensing system having a concentrate reservoir, a portable, temporary containment shall be installed under the reservoir to prevent accidental spills from leaking on surrounding decks.

Pub. No. S6480-GA4-CAT-010

- All empty plastic containers shall be carried to the solid waste room for disposal in the plastic waste processor (PWP) in accordance with Navy Ship Technical Manual (NSTM) 593, Pollution Control.

1.7 Shipboard Floor Stripper Concentrates

Products determined to comply with this product description and authorized for use on Navy surface ships are included in Table 2-8.

2.7.1 Product Description

The cleaning products listed in this section are categorized as Shipboard Floor Stripper Concentrates. These cleaners will remove water emulsion floor finish and floor wax from impermeable floor surfaces.

2.7.2 Related Safety, Health, and Environmental Hazards

- Ensure that general ventilation is in operation in the vicinity where cleaning compounds are being used.
- Avoid skin or eye contact with detergent concentrate. If contact is made, flush affected area with water. Wear chemical worker goggles and rubber gloves when handling these concentrates. Consult the product MSDS for specific guidance.
- Avoid breathing mists and vapors from these concentrates.
- Use concentrated detergents only as prescribed on the container label. Ensure that the concentrate is diluted in accordance with the manufacturer's directions.
- **All floor finish restorer concentrates shall be disposed of as Used/Excess HM.** This disposal requirement does not pertain to unused or used solutions diluted in accordance with manufacturer's directions.
- If used in a dispensing system, the concentrate shall only be used with the manufacturer-authorized dispenser. **The concentrate may not be used with another manufacturer's dispensing system.**
- If used in a dispensing system having a concentrate reservoir, a portable, temporary containment be installed under the reservoir to prevent accidental spills and leakage on surrounding decks.
- All empty plastic containers shall be carried to the solid waste room for disposal in the plastic waste processor (PWP) in accordance with Navy Ship Technical Manual (NSTM) 593, Pollution Control.

1.8 Glass Cleaner Concentrates

Products determined to comply with this product description and authorized for use on Navy surface ships are included in Table 2-9.

2.8.1 Product Description

The cleaning concentrates listed in this section are categorized as glass cleaner liquid concentrates with and without antifogging properties. These glass cleaners are used to polish glass surfaces, plastics, ceramics, chrome, painted surfaces, and stainless steel. The glass cleaner concentrates, when diluted in accordance with the manufacturers instructions, are applied using manually pumped plastic or glass bottles and corresponding refills (not aerosol-packaged, ready-to-use cleaners).

NOTE

Aerosol-packaged ready-to-use cleaners are not included under this description. In order to minimize the use of propellants and the accumulation of empty aerosol cans, manually hand pumped product spray dispensers are recommended and considered a more viable and environmentally-friendly option.

2.8.2 Related Safety, Health, and Environmental Hazards

- Many glass cleaning concentrates have a flash point less than 140° F and are considered **“flammable materials.”** Glass cleaning concentrates should be stored in accordance with current directives for **“flammable liquids”** as stated in OPNAVINST 5110.19. **DO NOT use or store glass cleaning concentrates near or on hot surfaces or sources of ignition, sparks, or an open flame and oxidizers such as calcium hypochlorite, sodium nitrate, and hydrogen peroxide.** Diluted glass cleaning solutions are not classified as “flammable materials.” No special handling or storage considerations are required for these in-use glass cleaners.
- Ensure that general ventilation is in operation in the vicinity where cleaning compounds are being used.
- Avoid skin or eye contact with glass cleaner concentrate. If contact is made, flush affected area with water. Wear chemical worker goggles and rubber gloves when handling these concentrates. Consult the product MSDS for specific guidance.
- Avoid breathing mists and vapors from these concentrates.

Pub. No. S6480-GA4-CAT-010

- Use concentrated detergents only as prescribed on the container label. Ensure that the concentrate is diluted in accordance with the manufacturer's directions.
- **All glass cleaner concentrates shall be disposed of as Used/Excess HM.** This disposal requirement does not pertain to unused or expended solutions diluted in accordance with manufacturer's directions.
- If used in a dispensing system, the concentrate shall be only used with the manufacturer-authorized dispenser. **The concentrate may not be used with another manufacturer's dispensing system.**
- If used in a dispensing system having a concentrate reservoir, a portable, temporary containment be installed under the reservoir to prevent accidental spills and leakage on surrounding decks.
- All empty plastic containers shall be carried to the solid waste room for disposal in the plastic waste processor (PWP) in accordance with Navy Ship Technical Manual (NSTM) 593, Pollution Control.

3.0 AUTHORIZED DISPENSING SYSTEMS

This chapter covers general-purpose chemical cleaning dispensing systems (CCDSs) for Naval surface ships general-purpose use. The dispensers are used to mix and dispense cleaning compound concentrates. The cleaning compounds must be procured separately. This chapter will summarize the requirements for approved dispensing systems, as documented in the Technical Purchase Description (TPD) for dispensing systems.

NOTE

Prior to ordering dispensing systems, contact the manufacturer's Customer Service Department to verify the following information:

- **Dispenser model features, flow options, supporting hardware, dilution ratios for specific concentrates, backflow options, installation options, etc.**
- **Dispenser model numbers and product names are current and not changed or discontinued.**

3.1 General Requirements for Shipboard Dispensing Systems

The following general requirements are necessary for authorized surface ships CCDSs:

- The installation and maintenance of the CCDS shall be conducted by the manufacturer or Ship's Force in accordance with manufacturers' instructions and requirements contained herein.
- Only manufacturer-authorized products shall be used with a specific manufacturer's dispensing system.
- The CCDS shall have a lock and key mechanism or tamper-resistant feature built into the system. If the dispensing system is not designed with this feature, a dispensing system enclosure is required.
- The CCDS have a backflow prevention feature to prevent cross-contamination of the potable water system.
- The CCDS may be a gravity feed, pneumatic, or electronically-monitored (or similar) dispensing system.

- The CCDS automatically dilutes the concentrated cleaner to the prescribed-manufacturer's dilution ratio to provide a ready-to-use cleaner. This dilution ratio shall be adjustable to suit a variety of cleaning compounds' dilutions as specified by the manufacturer. Information related to the dilution ratios for specific applications is provided in the manufacturers CCDS and concentrate technical data to ensure proper dilution ratios are dispensed.
- The dispensing system pass or disassemble so that it can pass through a shipboard access (26 X 66 inches) with 8-inch radius corners.
- A portable, temporary containment shall be installed under the concentrate reservoir to prevent accidental spills and leakage on surrounding decks.

3.2 Installation Requirements for Shipboard Dispensing Systems

The following installation requirements are necessary for authorized surface ship CCDSs:

- The CCDSs shall be physically and visually accessible from the front for operation and for normal maintenance with tools, test equipment, and replacement parts.
- The CCDS shall be installed in a work area, i.e., shop, work center, etc. that has adequate stowage facilities for the cleaner concentrates and also potable water source connections in the proximity and adequate ventilation.
- Electronic CCDSs shall meet requirements of UL 62 "Flexible Control Equipment" and UL 508 "Industrial Control Equipment." The CCDS unit shall operate on 115 VAC, 60 Hz, single-phase power, as defined in MIL-STD-1399, Section 300 "Interface Standard for Shipboard Systems Section 300A Electric Power, Alternating" and shall have provisions for making direct (hardwired) connections for electric power (2 conductors) and for equipment grounding (1 conductor). All outer metallic surfaces shall be grounded via the equipment grounding connection. The grounding resistance between any exposed metallic surfaces and the common ground point shall be not greater than 0.1 ohm. Electrical components shall be provided in accordance with NEMA Type 13 or equivalent enclosure protection. Metal parts of electrical components and enclosures shall be inherently corrosion resistant or shall be treated and processed for corrosion resistance in accordance with IEEE Standard 45 "IEEE Recommended Practice for Electric Installation of Shipboard." A motor, if present, shall be hermetically sealed.

- A data nameplate or decal shall be installed to provide the manufacturer's name, model, serial number, and any other information needed to uniquely identify the unit.
- An instruction plate shall be installed to provide instructions for start-up, operation, and shut-down.

3.3 Authorized Shipboard Dispensing Systems

This section presents general purpose chemical cleaning dispensing systems (CCDSs) that are authorized for Naval shipboard general purpose use. The dispensers are used to mix and dispense cleaning compound concentrates. The cleaning compounds must be procured separately. Dispenser feature highlights were obtained from manufacturer product information. For more detailed product descriptions, contact the manufacturers. Tables 3-2 through 3-14 show the approved CCDSs and some of their associated characteristics.

4.0 AUTHORIZED READY-TO-USE CLEANING PRODUCTS

Products determined to comply with this product description and authorized for use on Navy surface ships are included in Tables 4-1, 4-2, and 4-3.

4.1 Product Description

The cleaners represented in this category are pre-packaged solutions that do not require any dilution on the part of the end user. The Ready-to-Use category consists of three types of cleaners:

Type 1 - A spray-on, wipe-off, general hard surface cleaner

Type 2 - A spray-on, wipe-off glass cleaner

Type 3 - A spray-on, non-food contact disinfectant cleaner

4.2 Application Method

These cleaners are usually packaged or applied using manually pumped bottles (plastic or glass) and may be fill/refilled manually from a larger container of the same ready-to-use product.

NOTE

Aerosol-packaged ready-to-use cleaners are not included under this description. In order to minimize the use of propellants and the accumulation of empty aerosol cans, manually hand pumped product spray dispensers are recommended and considered a more viable and environmentally-friendly option.

4.3 Related Safety, Health, and Environmental Hazards

- Ensure that general ventilation is in operation in the vicinity where cleaning compounds are being used.
- Avoid skin or eye contact with detergent. If contact is made, flush affected area liberally with water. Consult the MSDS for specific guidance.

Pub. No. S6480-GA4-CAT-010

- Avoid breathing mists and vapors from the products.
- Ensure the cleaner is used in accordance with the manufacturer's directions.

5.0 AUTHORIZED DISHWASHING/SCULLERY CLEANING PRODUCTS

Dishwashing detergents, rinse additives, etc. are considered common consumer commodities and general household consumable products. All of the submitted dishwashing and scullery cleaning products were evaluated to determine if these products meet the specific TPD requirements for each application. In many instances, these products were determined to be caustic and contain enzyme additives. To date, NEHC has not sanctioned the use of enzymes, bacterial or microbial agents for shipboard use. As a result, cleaning products containing enzyme, bacteria or microbial agents are not authorized for use by this catalog. This evaluation resulted in the authorization of the cleaning products listed in this chapter for use on U.S. Navy surface ships. The applications discussed in this chapter are as follow:

- Dishwasher Detergents
- Dishwasher Rinse Additives
- Deep Sink Pre-Soak Cleaners
- Dishwasher Descalers
- Oven and Grill Cleaners

5.1 Dishwasher Detergents

Products determined to comply with this product description and authorized for use on Navy surface ships are included in Table 5-1.

5.1.1 Product Description

Dishwasher detergents listed in this section cover solid, liquid, or granular, non-chlorinated, machine dishwashing compounds (without sanitizing properties) suitable for use in dishwashing machines, designed for afloat used by the Navy and equipped with or without detergent dispensing equipment. The compounds are designed to provide clean ware and glasses under heavy soil loads in soft to hard water when used at recommended ware washing conditions.

5.1.2 Related Safety, Health, and Environmental Hazards

- Avoid skin or eye contact with detergent concentrate. If contact is made, flush affected area with water. Wear chemical worker goggles and rubber gloves when handling these concentrates. Consult the product MSDS for specific guidance.
- Avoid breathing dust and/or vapors from these concentrates.
- Use concentrated detergents only as prescribed on the container label. Ensure that the concentrate is diluted in accordance with the manufacturer's directions.

- **All dishwasher detergent concentrates shall be disposed of as Used/Excess HM.** This disposal requirement does not pertain to unused or used solutions diluted in accordance with manufacturer's directions.
- If used in a dispensing system having a concentrate reservoir, the detergent concentrate shall only be used with the manufacturer-authorized dispenser. **The concentrate may not be used with another manufacturer's dispensing system.**
- All empty plastic containers shall be carried to the solid waste room for disposal in the plastic waste processor (PWP) in accordance with Navy Ship Technical Manual (NSTM) 593, Pollution Control.

5.2 Dishwasher Rinse Additives

Products determined to comply with this product description and authorized for use on Navy surface ships are included in Table 5-2.

5.2.1 Product Description

Dishwasher rinse additives listed in this section cover a low-foaming solid or liquid rinse additive concentrate for use in the final rinse cycle of a mechanical dishwashing machine equipped with a suitable rinse injector device for Navy shipboard application.

5.2.2 Related Safety, Health, and Environmental Hazards

- Avoid skin or eye contact with rinse additives. If contact is made, flush affected area with water. Wear chemical worker goggles and rubber gloves when handling these additives. Consult the product MSDS for specific guidance.
- Avoid breathing dust and/or vapors from these additives.
- Use rinse additive concentrates only as prescribed on the container label. Ensure that the concentrate is diluted in accordance with the manufacturer's directions.
- **All rinse additive concentrates shall be disposed of as Used/Excess HM.** This disposal requirement does not pertain to unused or used solutions diluted in accordance with manufacturer's directions.
- If used in a dispensing system concentrate reservoir, the additive concentrate shall only be used with the manufacturer-authorized dispenser. **The concentrate may not be used with another manufacturer's dispensing system.**
- All empty plastic containers shall be carried to the solid waste room for disposal in the plastic waste processor (PWP) in accordance with Navy Ship Technical Manual (NSTM) 593, Pollution Control.

5.3 Deep Sink Pre-Soak Cleaners

Products determined to comply with this product description and authorized for use on Navy surface ships are included in Table 5-3.

5.3.1 Product Description

Deep sink pre-soak cleaners listed in this section cover Navy shipboard requirements for liquid or powder pre-soak cleaners (without sanitizing properties). Certain commercial cleaners are known to contain enzyme removal agents. To date, the Navy Environmental Health Center (NEHC) has not sanctioned the use of enzymes, bacterial or microbial agents for shipboard use. As a result, pre-soak cleaning products containing enzyme, bacteria or microbial agents are not authorized for use by this catalog.

5.3.2 Related Safety, Health, and Environmental Hazards

- Avoid skin or eye contact with pre-soak concentrated cleaners. If contact is made, flush affected area with water. Wear chemical worker goggles and rubber gloves when handling these concentrates. Consult the product MSDS for specific guidance.
- Avoid breathing mists, dust, and/or vapors from these cleaners.
- Use concentrated cleaners only as prescribed on the container label. Ensure that the concentrate is diluted in accordance with the manufacturer's directions.
- **All deep sink pre-soak concentrates shall be disposed of as Used/Excess HM.** This disposal requirement does not pertain to unused or used solutions diluted in accordance with manufacturer's directions.
- All empty plastic containers shall be carried to the solid waste room for disposal in the plastic waste processor (PWP) in accordance with Navy Ship Technical Manual (NSTM) 593, Pollution Control.

5.4 Dishwasher Descalers

Products determined to comply with this product description and authorized for use on Navy surface ships are included in Table 5-4.

5.4.1 Product Description

Dishwasher descalers listed in this section cover a liquid form of scale removing compound intended for removing scale deposits from environmental surfaces, commercial dishwashing machines, and boiler coils. This compound can be used in laboratories, food handling and process areas.

5.4.2 Related Safety, Health, and Environmental Hazards

- Avoid skin or eye contact with the dishwasher descaling solutions. If contact is made, flush affected area with water. Wear chemical worker goggles and rubber gloves when handling these concentrates. Consult the product MSDS for specific guidance.
- Avoid breathing vapors from descaler concentrates.
- Use descalers only as prescribed on the container label. Ensure that the descaler concentrate is diluted in accordance with the manufacturer's directions.
- **All dishwasher descaler concentrates shall be disposed of as Used/Excess HM.** All unused or expended diluted solutions shall be neutralized and disposed of in accordance with instructions provided in Navy Ship Technical Manual (NSTM) 593, Pollution Control.
- All empty plastic containers shall be carried to the solid waste room for disposal in the plastic waste processor (PWP) in accordance with NSTM 593, Pollution Control.

5.5 Oven and Grill Cleaners

Products determined to comply with this product description and authorized for use on Navy surface ships are included in Table 5-5.

5.5.1 Product Description

Oven and grill cleaning compounds listed in this section cover two types of commercially available oven cleaners suitable for removing heavy, baked-on grease and carbonized soil deposits on grills, ovens, fryers, other kitchen equipment (including stainless steel), and vertical and horizontal surfaces where such deposits might occur. Type 1 is an aerosol oven cleaner while Type 2 represents a liquid or gel.

5.5.1 Related Safety, Health, and Environmental Hazards

- Ensure that general ventilation is in operation in the vicinity where cleaning compounds are being used.
- Avoid skin or eye contact with the cleaner spray or liquid. If contact is made, flush affected area with copious amounts of water. Wear chemical worker goggles and rubber gloves when handling these compounds. Consult the product MSDS for specific guidance.
- Avoid breathing vapors from these cleaning compounds.
- Avoid using aerosol spray near heat source or open flame.
- Use concentrated oven cleaners only as prescribed on the container label. Ensure that the oven cleaner is used in accordance with the manufacturer's directions.
- **All unused oven cleaners shall be disposed of as Used/Excess HM.** This disposal requirement does not pertain to unused or used solutions diluted in accordance with manufacturer's directions.
- All empty plastic containers shall be carried to the solid waste room for disposal in the plastic waste processor (PWP) in accordance with Navy Ship Technical Manual (NSTM) 593, Pollution Control.

6.0 AUTHORIZED MISCELLANEOUS CLEANERS

The miscellaneous cleaners, i.e., air fresheners, furniture polish, etc., covered in this section are considered common consumer commodities and general household consumable products. These cleaning products were evaluated to determine if the submitted products meet specific TPD requirements for each application. Since these cleaners are used in relatively small quantities during normal usage, the impact on the environment is considered minimal. Health, safety, and cleaning performance issues were primary concerns while conducting each product review. This evaluation resulted in the authorization of the cleaning products listed in this chapter for use on U. S. Navy surface ships. The applications discussed in this chapter are as follows:

- Air Fresheners/Deodorizers
- Furniture Polishes
- Carpet Cleaners
- Metal Polishes

6.1 Air Fresheners/Deodorizers

Products determined to comply with this product description and authorized for use on Navy surface ships are included in Table 6-1.

6.1.1 Product Description

Air fresheners/deodorizers listed in this section covers air fresheners which shall eliminate odors from stale cigarette and cigar smoke, urine and fecal matter, vomit, food spillage, garbage, cooked foods and perspiration. These deodorizers are intended to be used in berthing spaces, heads, washrooms, and general habitability areas. This category does not include air deodorizers in aerosol cans or deodorant cakes/solids used in toilets and urinals. Two types of air fresheners are included in the category: odor counteractant in a gel matrix, and a liquid concentrate deodorizer. Air deodorizer gels present a minimum risk to the end user when used according to manufacturer's directions.

6.1.2 Related Safety, Health, and Environmental Hazards

- Avoid skin or eye contact with the liquid concentrate deodorizer. If contact is made, flush affected area with water. Wear chemical worker goggles and rubber gloves when handling these concentrates. Consult the product MSDS for specific guidance.
- Avoid breathing vapors from the air freshener/deodorizer concentrates.

Pub. No. S6480-A4-CAT-010

- Use air fresheners/deodorizers only as prescribed on the container label. Ensure that the air fresheners/deodorizers are used in accordance with the manufacturer's directions.
- If used in a dispensing system concentrate reservoir, the concentrate shall only be with the manufacturer-authorized dispensing system. **The concentrate may not be used with another manufacturer's dispensing system.**
- **All unused liquid concentrates shall be disposed of as Used/Excess HM.** This disposal requirement does not pertain to unused or used solutions diluted in accordance with manufacturer's directions.
- All empty plastic containers shall be carried to the solid waste room for disposal in the plastic waste processor (PWP) in accordance with Navy Ship Technical Manual (NSTM) 593, Pollution Control.

6.2 Furniture Polishes

Products determined to comply with this product description and authorized for use on Navy surface ships are included in Table 6-2.

6.2.1 Product Description

The furniture polishes listed in this section cover two types of commercially available furniture polishes suitable for cleaning and polishing wood and metal furniture: Type I - aerosol and Type 2 - liquid.

6.2.1 Related Safety, Health, and Environmental Hazards

- Ensure that general ventilation is in operation in the vicinity where polishes are being used, if possible.
- Avoid contact with eyes. If contact is made, flush affected area with water.
- Avoid breathing vapors from the aerosol cans.
- **Avoid using aerosol cans near heat source or open flame .**
- Use furniture polish as described on the container label. Ensure that the furniture polish is used in accordance with the manufacturer's directions.
- **All unused furniture polish shall be disposed of as Used/Excess HM.**
- All empty plastic containers shall be carried to the solid waste room for disposal in the plastic waste processor (PWP) in accordance with Navy Ship Technical Manual (NSTM) 593, Pollution Control.

6.3 Carpet Cleaners

Products determined to comply with this product description and authorized for use on Navy surface ships are included in Table 6-3.

6.3.1 Product Description

The carpet cleaners listed in this section cover commercially available cleaning compound liquid concentrates for cleaning rugs and upholstery.

6.3.2 Related Safety, Health, and Environmental Hazards

- Ensure that general ventilation is in operation in the vicinity where carpet cleaners are being used.
- Avoid contact with eyes. Wear chemical worker goggles and rubber gloves when handling these concentrates. If contact is made, flush affected area with water.
- Use carpet cleaner concentrates as described on the container label. Ensure that the carpet cleaner is used and diluted in accordance with the manufacturer's directions.
- If used in a dispensing system concentrate reservoir, the concentrate shall only be used with the manufacturer-authorized dispenser. **The concentrate may not be used with another manufacturer's dispensing system.**
- **All carpet cleaner concentrates shall be disposed of as Used/Excess HM.** This disposal requirement does not pertain to unused or used solutions diluted in accordance with manufacturer's directions.
- All empty plastic containers shall be carried to the solid waste room for disposal in the plastic waste processor (PWP) in accordance with Navy Ship Technical Manual (NSTM) 593, Pollution Control.

6.4 Metal Polishes

Products determined to comply with this product description and authorized for use on Navy surface ships are included in Table 6-4.

6.4.1 Product Description

Metal polishes in this section cover liquid combination cleaner-polishers with a tarnish preventive for use on brass, brass alloys, copper, chrome, or nickel.

6.4.2 Related Safety, Health, and Environmental Hazards

- Ensure that general ventilation is in operation in the vicinity where metal polishes are being used.
- Avoid contact with eyes. Wear chemical worker goggles and rubber gloves when handling these concentrates. If contact is made, flush affected area with water.
- Use metal cleaners as described on the container label. Ensure that metal polishes are used in accordance with the manufacturer's directions.
- **All metal polishes shall be disposed of as Used/Excess HM.** This disposal requirement does not pertain to unused or used solutions diluted in accordance with manufacturer's directions.
- All empty plastic containers shall be carried to the solid waste room for disposal in the plastic waste processor (PWP) in accordance with Navy Ship Technical Manual (NSTM) 593, Pollution Control.

7.0 HAND SOAPS AND CLEANERS

Hand soaps listed in this section cover commercially available liquid and powdered soaps typically used in soap dispensers. The powdered hand soap products consist of soap and borax (with or without lanolin) to remove heavy occupational soils, such as, oils and greases. The waterless hand cleaners consist of a cream/gel or lotion used for removing grease and industrial soils and may be used with or without a manual dispensing system. All products in this category are considered common consumer commodities and afford minimum risk to the user. The Naval Environmental Health Center (NEHC) has stated that hand soaps/cleaners are considered eye and/or skin irritants. These hand soaps and cleaners are listed on the Ship's Hazardous Materials List (SHML) to ensure Material Safety Data Sheets (MSDSs) are available for these products, if needed.

7.1 Product Description

The types of hand soaps/cleaners include:

- Liquid Hand Soaps
- Powdered Hand Soaps
- Waterless Hand Cleaners

Products determined to comply with these product descriptions and authorized for use on Navy surface ships are included in Tables 7-1, 7-2, and 7-3.

7.2 Related Safety, Health, and Environmental Hazards

- Avoid eye contact with the hand soap. If contact is made, flush affected area with water.
- All empty plastic containers shall be carried to the solid waste room for disposal in the plastic waste processor (PWP) in accordance with Navy Ship Technical Manual (NSTM) 593, Pollution Control.
